

# The markovchain Package: A Package for Easily Handling Discrete Markov Chains in R

Giorgio Alfredo Spedicato, Tae Seung Kang, Sai Bhargav Yalamanchi, Deepak Yadav, Ignacio Córdón

---

## Abstract

The **markovchain** package aims to fill a gap within the R framework providing S4 classes and methods for easily handling discrete time Markov chains, homogeneous and simple inhomogeneous ones as well as continuous time Markov chains. The S4 classes for handling and analysing discrete and continuous time Markov chains are presented, as well as functions and method for performing probabilistic and statistical analysis. Finally, some examples in which the package's functions are applied to Economics, Finance and Natural Sciences topics are shown.

*Keywords:* discrete time Markov chains, continuous time Markov chains, transition matrices, communicating classes, periodicity, first passage time, stationary distributions.

---

## 1. Introduction

Markov chains represent a class of stochastic processes of great interest for the wide spectrum of practical applications. In particular, discrete time Markov chains (DTMC) permit to model the transition probabilities between discrete states by the aid of matrices. Various R packages deal with models that are based on Markov chains:

- **msm** ([Jackson 2011](#)) handles Multi-State Models for panel data.
- **mcmcR** ([Geyer and Johnson 2013](#)) implements Monte Carlo Markov Chain approach.
- **hmm** ([Himmelman and www.linhi.com 2010](#)) fits hidden Markov models with covariates.
- **mstate** fits 'Multi-State Models based on Markov chains for survival analysis ([de Wreede, Fiocco, and Putter 2011](#)).

Nevertheless, the R statistical environment ([R Core Team 2013](#)) seems to lack a simple package that coherently defines S4 classes for discrete Markov chains and allows to perform probabilistic analysis, statistical inference and applications. For the sake of completeness, **markovchain** is the second package specifically dedicated to DTMC analysis, being **DTMCPack** ([Nicholson 2013](#)) the first one. Notwithstanding, **markovchain** package ([Spedicato 2017](#)) aims to offer more flexibility in handling DTMC than other existing solutions, providing S4 classes for both homogeneous and non-homogeneous Markov chains as well as methods suited to perform statistical and probabilistic analysis.

The **markovchain** package depends on the following R packages: **expm** ([Goulet, Dutang, Maechler, Firth, Shapira, Stadelmann, and expm-developers@lists.R-forge.R-project.org 2013](#))

to perform efficient matrices powers; **igraph** (Csardi and Nepusz 2006) to perform pretty plotting of **markovchain** objects and **matlab** (Roebuck 2011), that contains functions for matrix management and calculations that emulate those within MATLAB environment. Moreover, other scientific softwares provide functions specifically designed to analyze DTMC, as Mathematica 9 (Wolfram Research 2013b).

The paper is structured as follows: Section 2 briefly reviews mathematics and definitions regarding DTMC, Section 3 discusses how to handle and manage Markov chain objects within the package, Section 4 and Section 5 show how to perform probabilistic and statistical modelling, while Section 6 presents some applied examples from various fields analyzed by means of the **markovchain** package.

## 2. Review of core mathematical concepts

### 2.1. General Definitions

A DTMC is a sequence of random variables  $X_1, X_2, \dots, X_n, \dots$  characterized by the Markov property (also known as memoryless property, see Equation 1). The Markov property states that the distribution of the forthcoming state  $X_{n+1}$  depends only on the current state  $X_n$  and doesn't depend on the previous ones  $X_{n-1}, X_{n-2}, \dots, X_1$ .

$$Pr(X_{n+1} = x_{n+1} | X_1 = x_1, X_2 = x_2, \dots, X_n = x_n) = Pr(X_{n+1} = x_{n+1} | X_n = x_n). \quad (1)$$

The set of possible states  $S = \{s_1, s_2, \dots, s_r\}$  of  $X_n$  can be finite or countable and it is named the state space of the chain.

The chain moves from one state to another (this change is named either 'transition' or 'step') and the probability  $p_{ij}$  to move from state  $s_i$  to state  $s_j$  in one step is named transition probability:

$$p_{ij} = Pr(X_1 = s_j | X_0 = s_i). \quad (2)$$

The probability of moving from state  $i$  to  $j$  in  $n$  steps is denoted by  $p_{ij}^{(n)} = Pr(X_n = s_j | X_0 = s_i)$ .

A DTMC is called time-homogeneous if the property shown in Equation 3 holds. Time homogeneity implies no change in the underlying transition probabilities as time goes on.

$$Pr(X_{n+1} = s_j | X_n = s_i) = Pr(X_n = s_j | X_{n-1} = s_i). \quad (3)$$

If the Markov chain is time-homogeneous, then  $p_{ij} = Pr(X_{k+1} = s_j | X_k = s_i)$  and  $p_{ij}^{(n)} = Pr(X_{n+k} = s_j | X_k = s_i)$ , where  $k > 0$ .

The probability distribution of transitions from one state to another can be represented into a transition matrix  $P = (p_{ij})_{i,j}$ , where each element of position  $(i, j)$  represents the transition probability  $p_{ij}$ . E.g., if  $r = 3$  the transition matrix  $P$  is shown in Equation 4

$$P = \begin{bmatrix} p_{11} & p_{12} & p_{13} \\ p_{21} & p_{22} & p_{23} \\ p_{31} & p_{32} & p_{33} \end{bmatrix}. \quad (4)$$

The distribution over the states can be written in the form of a stochastic row vector  $x$  (the term stochastic means that  $\sum_i x_i = 1, x_i \geq 0$ ): e.g., if the current state of  $x$  is  $s_2$ ,  $x = (0 \ 1 \ 0)$ . As a consequence, the relation between  $x^{(1)}$  and  $x^{(0)}$  is  $x^{(1)} = x^{(0)}P$  and, recursively, we get  $x^{(2)} = x^{(0)}P^2$  and  $x^{(n)} = x^{(0)}P^n$ ,  $n > 0$ .

DTMC are explained in most theory books on stochastic processes, see Brémaud (1999) and Dobrow (2016) for example. Valuable references online available are: Konstantopoulos (2009), Snell (1999) and Bard (2000).

## 2.2. Properties and classification of states

A state  $s_j$  is said accessible from state  $s_i$  (written  $s_i \rightarrow s_j$ ) if a system starting in state  $s_i$  has a positive probability to reach the state  $s_j$  at a certain point, i.e.,  $\exists n > 0 : p_{ij}^n > 0$ . If both  $s_i \rightarrow s_j$  and  $s_j \rightarrow s_i$ , then  $s_i$  and  $s_j$  are said to communicate.

A communicating class is defined to be a set of states that communicate. A DTMC can be composed by one or more communicating classes. If the DTMC is composed by only one communicating class (i.e., if all states in the chain communicate), then it is said irreducible. A communicating class is said to be closed if no states outside of the class can be reached from any state inside it.

If  $p_{ii} = 1$ ,  $s_i$  is defined as absorbing state: an absorbing state corresponds to a closed communicating class composed by one state only.

The canonic form of a DTMC transition matrix is a matrix having a block form, where the closed communicating classes are shown at the beginning of the diagonal matrix.

A state  $s_i$  has period  $k_i$  if any return to state  $s_i$  must occur in multiples of  $k_i$  steps, that is  $k_i = \gcd \{n : Pr(X_n = s_i | X_0 = s_i) > 0\}$ , where  $\gcd$  is the greatest common divisor. If  $k_i = 1$  the state  $s_i$  is said to be aperiodic, else if  $k_i > 1$  the state  $s_i$  is periodic with period  $k_i$ . Loosely speaking,  $s_i$  is periodic if it can only return to itself after a fixed number of transitions  $k_i > 1$  (or multiple of  $k_i$ ), else it is aperiodic.

If states  $s_i$  and  $s_j$  belong to the same communicating class, then they have the same period  $k_i$ . As a consequence, each of the states of an irreducible DTMC share the same periodicity. This periodicity is also considered the DTMC periodicity. It is possible to classify states according to their periodicity. Let  $T^{x \rightarrow x}$  is the number of periods to go back to state  $x$  knowing that the chain starts in  $x$ .

- A state  $x$  is recurrent if  $P(T^{x \rightarrow x} < +\infty) = 1$  (equivalently  $P(T^{x \rightarrow x} = +\infty) = 0$ ). In addition:
  1. A state  $x$  is null recurrent if in addition  $E(T^{x \rightarrow x}) = +\infty$ .
  2. A state  $x$  is positive recurrent if in addition  $E(T^{x \rightarrow x}) < +\infty$ .
  3. A state  $x$  is absorbing if in addition  $P(T^{x \rightarrow x} = 1) = 1$ .
- A state  $x$  is transient if  $P(T^{x \rightarrow x} < +\infty) < 1$  (equivalently  $P(T^{x \rightarrow x} = +\infty) > 0$ ).

It is possible to analyze the timing to reach a certain state. The first passage time (or hitting time) from state  $s_i$  to state  $s_j$  is the number  $T_{ij}$  of steps taken by the chain until it arrives for the first time to state  $s_j$ , given that  $X_0 = s_i$ . The probability distribution of  $T_{ij}$  is defined

by Equation 5

$$h_{ij}^{(n)} = Pr(T_{ij} = n) = Pr(X_n = s_j, X_{n-1} \neq s_j, \dots, X_1 \neq s_j | X_0 = s_i) \quad (5)$$

and can be found recursively using Equation 6, given that  $h_{ij}^{(n)} = p_{ij}$ .

$$h_{ij}^{(n)} = \sum_{k \in S - \{s_j\}} p_{ik} h_{kj}^{(n-1)}. \quad (6)$$

A commonly used quantity related to  $h$  is its average value, i.e. the *mean first passage time* (also expected hitting time), namely  $\bar{h}_{ij} = \sum_{n=1 \dots \infty} n h_{ij}^{(n)}$ .

If in the definition of the first passage time we let  $s_i = s_j$ , we obtain the first recurrence time  $T_i = \inf\{n \geq 1 : X_n = s_i | X_0 = s_i\}$ . We could also ask ourselves which is the *mean recurrence time*, an average of the mean first recurrence times:

$$r_i = \sum_{k=1}^{\infty} k \cdot P(T_i = k)$$

Revisiting the definition of recurrence and transience: a state  $s_i$  is said to be recurrent if it is visited infinitely often, i.e.,  $Pr(T_i < +\infty | X_0 = s_i) = 1$ . On the opposite,  $s_i$  is called transient if there is a positive probability that the chain will never return to  $s_i$ , i.e.,  $Pr(T_i = +\infty | X_0 = s_i) > 0$ .

Given a time homogeneous Markov chain with transition matrix  $P$ , a stationary distribution  $z$  is a stochastic row vector such that  $z = z \cdot P$ , where  $0 \leq z_j \leq 1 \forall j$  and  $\sum_j z_j = 1$ .

If a DTMC  $\{X_n\}$  is irreducible and aperiodic, then it has a limit distribution and this distribution is stationary. As a consequence, if  $P$  is the  $k \times k$  transition matrix of the chain and  $z = (z_1, \dots, z_k)$  is the unique eigenvector of  $P$  such that  $\sum_{i=1}^k z_i = 1$ , then we get

$$\lim_{n \rightarrow \infty} P^n = Z, \quad (7)$$

where  $Z$  is the matrix having all rows equal to  $z$ . The stationary distribution of  $\{X_n\}$  is represented by  $z$ .

A matrix  $A$  is called primitive if all of its entries are strictly positive, and we write it  $A > 0$ . If the transition matrix  $P$  for a DTMC has some primitive power, i.e. it exists  $m > 0 : P^m > 0$ , then the DTMC is said to be regular. In fact being regular is equivalent to being irreducible and aperiodic. All regular DTMCs are irreducible. The counterpart is not true.

Given two absorbing states  $s_A$  (source) and  $s_B$  (sink), the *committor probability*  $q_j^{(AB)}$  is the probability that a process starting in state  $s_i$  is absorbed in state  $s_B$  (rather than  $s_A$ ) (Noé, Schütte, Vanden-Eijnden, Reich, and Weigl 2009). It can be computed via

$$q_j^{(AB)} = \sum_{k \ni A, B} P_{jk} q_k^{(AB)} \quad \text{with} \quad q_A^{(AB)} = 0 \quad \text{and} \quad q_B^{(AB)} = 1 \quad (8)$$

Note we can also define the hitting probability from  $i$  to  $j$  as the probability of ever reaching the state  $j$  if our initial state is  $i$ :

$$h_{i,j} = Pr(T_{ij} < \infty) = \sum_{n=0}^{\infty} h_{ij}^{(n)} \quad (9)$$

In a DTMC with finite set of states, we know that a transient state communicates at least with one recurrent state. If the chain starts in a transient element, once it hits a recurrent state, it is going to be caught in its recurrent state, and we cannot expect it would go back to the initial state. Given a transient state  $i$  we can define the *absorption probability* to the recurrent state  $j$  as the probability that the first recurrent state that the Markov chain visits (and therefore gets absorbed by its recurrent class) is  $j$ ,  $f_i^* j$ . We can also define the *mean absorption time* as the mean number of steps the transient state  $i$  would take until it hits any recurrent state,  $b_i$ .

### 2.3. A short example

Consider the following numerical example. Suppose we have a DTMC with a set of 3 possible states  $S = \{s_1, s_2, s_3\}$ . Let the transition matrix be:

$$P = \begin{bmatrix} 0.5 & 0.2 & 0.3 \\ 0.15 & 0.45 & 0.4 \\ 0.25 & 0.35 & 0.4 \end{bmatrix}. \quad (10)$$

In  $P$ ,  $p_{11} = 0.5$  is the probability that  $X_1 = s_1$  given that we observed  $X_0 = s_1$  is 0.5, and so on. It is easy to see that the chain is irreducible since all the states communicate (it is made by one communicating class only).

Suppose that the current state of the chain is  $X_0 = s_2$ , i.e.,  $x^{(0)} = (0\ 1\ 0)$ , then the probability distribution of states after 1 and 2 steps can be computed as shown in Equations (11) and (12).

$$x^{(1)} = (0\ 1\ 0) \begin{bmatrix} 0.5 & 0.2 & 0.3 \\ 0.15 & 0.45 & 0.4 \\ 0.25 & 0.35 & 0.4 \end{bmatrix} = (0.15\ 0.45\ 0.4). \quad (11)$$

$$x^{(n)} = x^{(n-1)} P \rightarrow (0.15\ 0.45\ 0.4) \begin{bmatrix} 0.5 & 0.2 & 0.3 \\ 0.15 & 0.45 & 0.4 \\ 0.25 & 0.35 & 0.4 \end{bmatrix} = (0.2425\ 0.3725\ 0.385). \quad (12)$$

If we were interested in the probability of being in the state  $s_3$  in the second step, then  $Pr(X_2 = s_3 | X_0 = s_2) = 0.385$ .

### 3. The structure of the package

#### 3.1. Creating markovchain objects

The package is loaded within the R command line as follows:

```
R> library("markovchain")
```

```
Loading required package: matlab
```

```
Attaching package: 'matlab'
```

```
The following object is masked from 'package:stats':
```

```
  reshape
```

```
The following objects are masked from 'package:utils':
```

```
  find, fix
```

```
The following object is masked from 'package:base':
```

```
  sum
```

The `markovchain` and `markovchainList` S4 classes ([Chambers 2008](#)) are defined within the **markovchain** package as displayed:

```
Class "markovchain" [package "markovchain"]
```

```
Slots:
```

Name:	states	byrow	transitionMatrix	name
Class:	character	logical	matrix	character

```
Class "markovchainList" [package "markovchain"]
```

```
Slots:
```

Name:	markovchains	name
Class:	list	character

The first class has been designed to handle homogeneous Markov chain processes, while the latter (which is itself a list of `markovchain` objects) has been designed to handle non-homogeneous Markov chains processes.

Any element of `markovchain` class is comprised by following slots:

1. **states**: a character vector, listing the states for which transition probabilities are defined.
2. **byrow**: a logical element, indicating whether transition probabilities are shown by row or by column.
3. **transitionMatrix**: the probabilities of the transition matrix.
4. **name**: optional character element to name the DTMC.

The `markovchainList` objects are defined by following slots:

1. **markovchains**: a list of `markovchain` objects.
2. **name**: optional character element to name the DTMC.

The `markovchain` objects can be created either in a long way, as the following code shows

```
R> weatherStates <- c("sunny", "cloudy", "rain")
R> byRow <- TRUE
R> weatherMatrix <- matrix(data = c(0.70, 0.2, 0.1,
R+                               0.3, 0.4, 0.3,
R+                               0.2, 0.45, 0.35), byrow = byRow, nrow = 3,
R+                               dimnames = list(weatherStates, weatherStates))
R> mcWeather <- new("markovchain", states = weatherStates, byrow = byRow,
R+                   transitionMatrix = weatherMatrix, name = "Weather")
```

or in a shorter way, displayed below

```
R> mcWeather <- new("markovchain", states = c("sunny", "cloudy", "rain"),
R+                   transitionMatrix = matrix(data = c(0.70, 0.2, 0.1,
R+                   0.3, 0.4, 0.3,
R+                   0.2, 0.45, 0.35), byrow = byRow, nrow = 3),
R+                   name = "Weather")
```

When `new("markovchain")` is called alone, a default Markov chain is created.

```
R> defaultMc <- new("markovchain")
```

The quicker way to create `markovchain` objects is made possible thanks to the implemented `initialize` S4 method that checks that:

- the **transitionMatrix** to be a transition matrix, i.e., all entries to be probabilities and either all rows or all columns to sum up to one.
- the columns and rows names of **transitionMatrix** to be defined and to coincide with **states** vector slot.

The `markovchain` objects can be collected in a list within `markovchainList` S4 objects as following example shows.

```
R> mcList <- new("markovchainList", markovchains = list(mcWeather, defaultMc),
R+           name = "A list of Markov chains")
```

### 3.2. Handling markovchain objects

Table 1 lists which methods handle and manipulate **markovchain** objects.

Method	Purpose
<code>*</code>	Direct multiplication for transition matrices.
<code>^</code>	Compute the power <b>markovchain</b> of a given one.
<code>[</code>	Direct access to the elements of the transition matrix.
<code>==</code>	Equality operator between two transition matrices.
<code>!=</code>	Inequality operator between two transition matrices.
<code>as</code>	Operator to convert <b>markovchain</b> objects into <b>data.frame</b> and <b>table</b> object.
<code>dim</code>	Dimension of the transition matrix.
<code>names</code>	Equal to <b>states</b> .
<code>names&lt;-</code>	Change the <b>states</b> name.
<code>name</code>	Get the name of <b>markovchain</b> object.
<code>name&lt;-</code>	Change the name of <b>markovchain</b> object.
<code>plot</code>	plot method for <b>markovchain</b> objects.
<code>print</code>	print method for <b>markovchain</b> objects.
<code>show</code>	show method for <b>markovchain</b> objects.
<code>sort</code>	sort method for <b>markovchain</b> objects, in terms of their states.
<code>states</code>	Name of the transition states.
<code>t</code>	Transposition operator (which switches <b>byrow</b> 'slot value and modifies the transition matrix coherently).

Table 1: **markovchain** methods for handling **markovchain** objects.

The examples that follow shows how operations on **markovchain** objects can be easily performed. For example, using the previously defined matrix we can find what is the probability distribution of expected weather states in two and seven days, given the actual state to be cloudy.

```
R> initialState <- c(0, 1, 0)
R> after2Days <- initialState * (mcWeather * mcWeather)
R> after7Days <- initialState * (mcWeather ^ 7)
R> after2Days
```

```
      sunny cloudy  rain
[1,]  0.39   0.355 0.255
```

```
R> round(after7Days, 3)
```

```
      sunny cloudy  rain
[1,] 0.462   0.319 0.219
```

A similar answer could have been obtained defining the vector of probabilities as a column vector. A column - defined probability matrix could be set up either creating a new matrix or transposing an existing `markovchain` object thanks to the `t` method.

```
R> initialState <- c(0, 1, 0)
R> after2Days <- (t(mcWeather) * t(mcWeather)) * initialState
R> after7Days <- (t(mcWeather) ^ 7) * initialState
R> after2Days
```

```
      [,1]
sunny 0.390
cloudy 0.355
rain   0.255
```

```
R> round(after7Days, 3)
```

```
      [,1]
sunny 0.462
cloudy 0.319
rain   0.219
```

The initial state vector previously shown can not necessarily be a probability vector, as the code that follows shows:

```
R> fvals<-function(mchain,initialstate,n) {
R+   out<-data.frame()
R+   names(initialstate)<-names(mchain)
R+   for (i in 0:n)
R+   {
R+     iteration<-initialstate*mchain^(i)
R+     out<-rbind(out,iteration)
R+   }
R+   out<-cbind(out, i=seq(0,n))
R+   out<-out[,c(4,1:3)]
R+   return(out)
R+ }
R> fvals(mchain=mcWeather,initialstate=c(90,5,5),n=4)
```

```
   i   sunny   cloudy   rain
1 0 90.00000  5.00000  5.00000
2 1 65.50000 22.25000 12.25000
3 2 54.97500 27.51250 17.51250
4 3 50.23875 29.88063 19.88062
5 4 48.10744 30.94628 20.94628
```

Basic methods have been defined for `markovchain` objects to quickly get states and transition matrix dimension.

```
R> states(mcWeather)
```

```
[1] "sunny" "cloudy" "rain"
```

```
R> names(mcWeather)
```

```
[1] "sunny" "cloudy" "rain"
```

```
R> dim(mcWeather)
```

```
[1] 3
```

Methods are available to set and get the name of `markovchain` object.

```
R> name(mcWeather)
```

```
[1] "Weather"
```

```
R> name(mcWeather) <- "New Name"
```

```
R> name(mcWeather)
```

```
[1] "New Name"
```

Also it is possible to alphabetically sort the transition matrix:

```
R> markovchain:::sort(mcWeather)
```

New Name

A 3 - dimensional discrete Markov Chain defined by the following states:

cloudy, rain, sunny

The transition matrix (by rows) is defined as follows:

	cloudy	rain	sunny
cloudy	0.40	0.30	0.3
rain	0.45	0.35	0.2
sunny	0.20	0.10	0.7

A direct access to transition probabilities is provided both by `transitionProbability` method and `"["` method.

```
R> transitionProbability(mcWeather, "cloudy", "rain")
```

```
[1] 0.3
```

```
R> mcWeather[2,3]
```

```
[1] 0.3
```

The transition matrix of a `markovchain` object can be displayed using `print` or `show` methods (the latter being less verbose). Similarly, the underlying transition probability diagram can be plotted by the use of `plot` method (as shown in Figure 1) which is based on **igraph** package (Csardi and Nepusz 2006). `plot` method for `markovchain` objects is a wrapper of `plot.igraph` for `igraph` S4 objects defined within the **igraph** package. Additional parameters can be passed to `plot` function to control the network graph layout. There are also **diagram** and **DiagrammeR** ways available for plotting as shown in Figure 2. The `plot` function also uses `communicatingClasses` function to separate out states of different communicating classes. All states that belong to one class have same colour.

```
R> print(mcWeather)
```

	sunny	cloudy	rain
sunny	0.7	0.20	0.10
cloudy	0.3	0.40	0.30
rain	0.2	0.45	0.35

```
R> show(mcWeather)
```

New Name

A 3 - dimensional discrete Markov Chain defined by the following states:

sunny, cloudy, rain

The transition matrix (by rows) is defined as follows:

	sunny	cloudy	rain
sunny	0.7	0.20	0.10
cloudy	0.3	0.40	0.30
rain	0.2	0.45	0.35

Attaching package: 'igraph'

The following objects are masked from 'package:stats':

decompose, spectrum

The following object is masked from 'package:base':

union

Loading required package: shape

If one would like to use the **MmgraphR** package (Adamopoulou 2018) to plot the transition matrix, the following code shows how to do:

Figure 1: Weather example. Markov chain plot

Figure 2: Weather example. Markov chain plot with diagram

```

R> stochastic_matrix_to_plot <- as(mcWeather, "matrix")
R> if (requireNamespace("MmgraphR", quietly = TRUE)) {
R+   library(MmgraphR)
R+   trmatplot(stochastic_matrix_to_plot, main = "Weather MC plot using MmgraphR", rowcons
R+   } else {
R+   message("MmgraphR unavailable")
R+   }

```

Import and export from some specific classes is possible, as shown in Figure 3 and in the following code.

```

R> mcDf <- as(mcWeather, "data.frame")
R> mcNew <- as(mcDf, "markovchain")
R> mcDf

```

	t0	t1	prob
1	sunny	sunny	0.70
2	sunny	cloudy	0.20

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

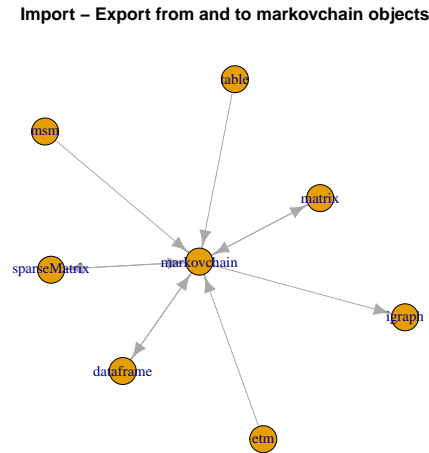

Figure 3: The markovchain methods for import and export

```

0, 1, 2
The transition matrix (by rows) is defined as follows:
      0      1      2
0 0.0000000 0.5000000 0.5000000
1 0.5000000 0.0000000 0.5000000
2 0.3333333 0.3333333 0.3333333

```

Coerce from `matrix` method, as the code below shows, represents another approach to create a `markovchain` method starting from a given squared probability matrix.

```

R> myMatr<-matrix(c(.1,.8,.1,.2,.6,.2,.3,.4,.3), byrow=TRUE, ncol=3)
R> myMc<-as(myMatr, "markovchain")
R> myMc

```

Unnamed Markov chain

```

A 3 - dimensional discrete Markov Chain defined by the following states:
s1, s2, s3
The transition matrix (by rows) is defined as follows:
      s1  s2  s3
s1 0.1 0.8 0.1
s2 0.2 0.6 0.2
s3 0.3 0.4 0.3

```

Non-homogeneous Markov chains can be created with the aid of `markovchainList` object. The example that follows arises from health insurance, where the costs associated to patients in a Continuous Care Health Community (CCHC) are modelled by a non-homogeneous Markov Chain, since the transition probabilities change by year. Methods explicitly written for `markovchainList` objects are: `print`, `show`, `dim` and `[`.

```

R> stateNames = c("H", "I", "D")

The `markovchain` package contains some data found in the literature related to DTMC models (see Section 6. Table 2 lists datasets and tables included within the current release of the package.

Dataset	Description
<code>blanden</code>	Mobility across income quartiles, <a href="#">Jo Blanden and Machin (2005)</a> .
<code>craigsendi</code>	CD4 cells, <a href="#">B. A. Craig and A. A. Sendi (2002)</a> .
<code>kullback</code>	raw transition matrices for testing homogeneity, <a href="#">Kullback, Kupperman, and Ku (1962)</a> .
<code>preproglucacon</code>	Preproglucacon DNA basis, <a href="#">P. J. Avery and D. A. Henderson (1999)</a> .
<code>rain</code>	Alofi Island rains, <a href="#">P. J. Avery and D. A. Henderson (1999)</a> .
<code>holson</code>	Individual states trajectories.
<code>sales</code>	Sales of six beverages in Hong Kong <a href="#">Ching, Ng, and Fung (2008)</a> .

Table 2: The `markovchain` `data.frame` and `table`.

Finally, Table 3 lists the demos included in the demo directory of the package.

R Code File	Description
<code>bard.R</code>	Structural analysis of Markov chains from Bard PPT.
<code>examples.R</code>	Notable Markov chains, e.g., The Gambler Ruin chain.
<code>quickStart.R</code>	Generic examples.
<code>extractMatrices.R</code>	Generic examples.

Table 3: The **markovchain** demos.

## 4. Probability with markovchain objects

The **markovchain** package contains functions to analyse DTMC from a probabilistic perspective. For example, the package provides methods to find stationary distributions and identifying absorbing and transient states. Many of these methods come from MATLAB listings that have been ported into R. For a full description of the underlying theory and algorithm the interested reader can overview the original MATLAB listings, [Feres \(2007\)](#) and [Montgomery \(2009\)](#).

Table 4 shows methods that can be applied on **markovchain** objects to perform probabilistic analysis.

Method	Returns
<code>absorbingStates</code>	the absorbing states of the transition matrix, if any.
<code>steadyStates</code>	the vector(s) of steady state(s) in matrix form.
<code>meanFirstPassageTime</code>	matrix or vector of mean first passage times.
<code>meanRecurrenceTime</code>	vector of mean number of steps to return to each recurrent state
<code>hittingProbabilities</code>	matrix of hitting probabilities for a Markov chain.
<code>meanAbsorptionTime</code>	expected number of steps for a transient state to be absorbed by any recurrent class
<code>absorptionProbabilities</code>	probabilities of transient states of being absorbed by each recurrent state
<code>committorAB</code>	committor probabilities
<code>communicatingClasses</code>	list of communicating classes. $s_j$ , given actual state $s_i$ .
<code>canonicForm</code>	the transition matrix into canonic form.
<code>is.accessible</code>	checks whether a state j is reachable from state i.
<code>is.irreducible</code>	checks whether a DTMC is irreducible.
<code>is.regular</code>	checks whether a DTMC is regular.
<code>period</code>	the period of an irreducible DTMC.
<code>recurrentClasses</code>	list of recurrent communicating classes.
<code>transientClasses</code>	list of transient communicatingclasses.
<code>recurrentStates</code>	the recurrent states of the transition matrix.
<code>transientStates</code>	the transient states of the transition matrix, if any.
<code>summary</code>	DTMC summary.

Table 4: **markovchain** methods: statistical operations.

### 4.1. Conditional distributions

The conditional distribution of weather states, given that current day's weather is sunny, is given by following code.

```
R> conditionalDistribution(mcWeather, "sunny")

sunny cloudy    rain
0.7      0.2     0.1
```

## 4.2. Stationary states

A stationary (steady state, or equilibrium) vector is a probability vector such that Equation 13 holds

$$\begin{aligned} 0 &\leq \pi_j \leq 1 \\ \sum_{j \in S} \pi_j &= 1 \\ \pi \cdot P &= \pi \end{aligned} \tag{13}$$

Steady states are associated to  $P$  eigenvalues equal to one. We could be tempted to compute them solving the eigen values / vectors of the matrix and taking real parts (since if  $u + iv$  is a eigen vector, for the matrix  $P$ , then  $Re(u + iv) = u$  and  $Im(u + iv) = v$  are eigen vectors) and normalizing by the vector sum, this carries some concerns:

1. If  $u, v \in \mathbb{R}^n$  are linearly independent eigen vectors associated to 1 eigen value,  $u + iv$ ,  $u + iu$  are also linearly independent eigen vectors, and their real parts coincide. Clearly if we took real parts, we would be loosing an eigen vector, because we cannot know in advance if the underlying algorithm to compute the eigen vectors is going to output something similar to what we described. We should be agnostic to the underlying eigen vector computation algorithm.
2. Imagine the identity  $P$  of dimensions  $2 \times 2$ . Its eigen vectors associated to the 1 eigen value are  $u = (1, 0)$  and  $v = (0, 1)$ . However, the underlying algorithm to compute eigen vectors could return  $(1, -2)$  and  $(-2, 1)$  instead, that are linear combinations of the aforementioned ones, and therefore eigen vectors. Normalizing by their sum, we would get:  $(-1, 2)$  and  $(2, -1)$ , which obviously are not probability measures. Again, we should be agnostic to the underlying eigen computation algorithm.
3. Algorithms to compute eigen values / vectors are computationally expensive: they are iterative, and we cannot predict a fixed number of iterations for them. Moreover, each iteration takes  $\mathcal{O}(m^2)$  or  $\mathcal{O}(m^3)$  algorithmic complexity, with  $m$  the number of states.

We are going to use that every irreducible DTMC has a unique steady state, that is, if  $M$  is the matrix for an irreducible DTMC (all states communicate with each other), then it exists a unique  $v \in \mathbb{R}^m$  such that:

$$v \cdot M = v, \quad \sum_{i=1}^m v_i = 1$$

Also, we'll use that a steady state for a DTMC assigns 0 to the transient states. The cannonic form of a (by row) stochastic matrix looks alike:

$$\left( \begin{array}{c|c|c|c|c} M_1 & 0 & 0 & \dots & 0 \\ \hline 0 & M_2 & 0 & \dots & 0 \\ \hline 0 & 0 & M_3 & \dots & 0 \\ \hline \vdots & \vdots & \vdots & \ddots & \vdots \\ \hline A_1 & A_2 & A_3 & \dots & R \end{array} \right)$$

where  $M_i$  corresponds to irreducible subchains, the blocks  $A_i$  correspond to the transitions from transient states to each of the recurrent classes and  $R$  are the transitions from the transient states to themselves.

Also, we should note that a Markov chain has exactly the same name of steady states as recurrent classes. Therefore, we have coded the following algorithm <sup>1</sup>:

1. Identify the recurrent classes  $[C_1, \dots, C_l]$  with `recurrentClasses` function.
2. Take each class  $C_i$ , compute the submatrix corresponding to it  $M_i$ .
3. Solve the system  $v \cdot C_i = v$ ,  $\sum_{j=1}^{|C_i|} v_j = 1$  which has a unique solution, for each  $i = 1, \dots, l$ .
4. Map each state  $v_i$  to the original order in  $P$  and assign a 0 to the slots corresponding to transient states in the matrix.

The result is returned in matrix form.

```
R> steadyStates(mcWeather)

      sunny    cloudy    rain
[1,] 0.4636364 0.3181818 0.2181818
```

It is possible for a Markov chain to have more than one stationary distribution, as the gambler ruin example shows.

```
R> gamblerRuinMarkovChain <- function(moneyMax, prob = 0.5) {
R+   m <- matlab::zeros(moneyMax + 1)
R+   m[1,1] <- m[moneyMax + 1, moneyMax + 1] <- 1
R+   states <- as.character(0:moneyMax)
R+   rownames(m) <- colnames(m) <- states
R+
R+   for(i in 2:moneyMax){
R+     m[i,i-1] <- 1 - prob
R+     m[i, i + 1] <- prob
R+   }
R+ }
```

---

<sup>1</sup>We would like to thank Prof. Christophe Dutang for his contributions to the development of this method. He coded a first improvement of the original `steadyStates` method and we could not have reached the current correctness without his previous work

```

R> new("markovchain", transitionMatrix = m,
R>      name = paste("Gambler ruin", moneyMax, "dim", sep = " "))
R> }
R>
R> mcGR4 <- gamblerRuinMarkovChain(moneyMax = 4, prob = 0.5)
R> steadyStates(mcGR4)

```

```

      0 1 2 3 4
[1,] 0 0 0 0 1
[2,] 1 0 0 0 0

```

### 4.3. Classification of states

Absorbing states are determined by means of `absorbingStates` method.

```

R> absorbingStates(mcGR4)

[1] "0" "4"

R> absorbingStates(mcWeather)

character(0)

```

The key function in methods which need knowledge about communicating classes, recurrent states, transient states, is `.commclassKernel`, which is a modification of Tarjan's algorithm from [Tarjan \(1972\)](#). This `.commclassKernel` method gets a transition matrix of dimension  $n$  and returns a list of two items:

1. `classes`, an matrix whose  $(i, j)$  entry is `true` iff  $s_i$  and  $s_j$  are in the same communicating class.
2. `closed`, a vector whose  $i$ -th entry indicates whether the communicating class to which  $i$  belongs is closed.

These functions are used by two other internal functions on which the `summary` method for `markovchain` objects works.

The example matrix used in [Feres \(2007\)](#) well exemplifies the purpose of the function.

```

R> P <- matlab::zeros(10)
R> P[1, c(1, 3)] <- 1/2;
R> P[2, 2] <- 1/3; P[2, 7] <- 2/3;
R> P[3, 1] <- 1;
R> P[4, 5] <- 1;
R> P[5, c(4, 5, 9)] <- 1/3;
R> P[6, 6] <- 1;
R> P[7, 7] <- 1/4; P[7, 9] <- 3/4;

```

```

R> P[8, c(3, 4, 8, 10)] <- 1/4;
R> P[9, 2] <- 1;
R> P[10, c(2, 5, 10)] <- 1/3;
R> rownames(P) <- letters[1:10]
R> colnames(P) <- letters[1:10]
R> probMc <- new("markovchain", transitionMatrix = P,
R+           name = "Probability MC")
R> summary(probMc)

```

Probability MC Markov chain that is composed by:

Closed classes:

a c

b g i

f

Recurrent classes:

{a,c},{b,g,i},{f}

Transient classes:

{d,e},{h},{j}

The Markov chain is not irreducible

The absorbing states are: f

All states that pertain to a transient class are named “transient” and a specific method has been written to elicit them.

```

R> transientStates(probMc)

```

```

[1] "d" "e" "h" "j"

```

`canonicForm` method that turns a Markov chain into its canonic form, reordering the states to have first the recurrent classes and then the transient states.

```

R> probMcCanonic <- canonicForm(probMc)
R> probMc

```

The function `is.accessible` permits to investigate whether a state  $s_j$  is accessible from state  $s_i$ , that is whether the probability to eventually reach  $s_j$  starting from  $s_i$  is greater than zero.

```
R> is.accessible(object = probMc, from = "a", to = "c")
```

```
[1] TRUE
```

```
R> is.accessible(object = probMc, from = "g", to = "c")
```

```
[1] FALSE
```

In Section 2.2 we observed that, if a DTMC is irreducible, all its states share the same periodicity. Then, the `period` function returns the periodicity of the DTMC, provided that it is irreducible. The example that follows shows how to find if a DTMC is reducible or irreducible by means of the function `is.irreducible` and, in the latter case, the method `period` is used to compute the periodicity of the chain.

```

R> E <- matrix(0, nrow = 4, ncol = 4)
R> E[1, 2] <- 1
R> E[2, 1] <- 1/3; E[2, 3] <- 2/3
R> E[3, 2] <- 1/4; E[3, 4] <- 3/4
R> E[4, 3] <- 1
R>
R> mcE <- new("markovchain", states = c("a", "b", "c", "d"),
R+      transitionMatrix = E,
R+      name = "E")
R> is.irreducible(mcE)

```

```
[1] TRUE
```

```
R> period(mcE)
```

```
[1] 2
```

The example Markov chain found in Mathematica web site ([Wolfram Research 2013a](#)) has been used, and is plotted in Figure 4.

```
R> require(matlab)
R> mathematicaMatr <- zeros(5)
R> mathematicaMatr[1,] <- c(0, 1/3, 0, 2/3, 0)
R> mathematicaMatr[2,] <- c(1/2, 0, 0, 0, 1/2)
R> mathematicaMatr[3,] <- c(0, 0, 1/2, 1/2, 0)
R> mathematicaMatr[4,] <- c(0, 0, 1/2, 1/2, 0)
R> mathematicaMatr[5,] <- c(0, 0, 0, 0, 1)
R> statesNames <- letters[1:5]
R> mathematicaMc <- new("markovchain", transitionMatrix = mathematicaMatr,
R+       name = "Mathematica MC", states = statesNames)
```

Mathematica MC Markov chain that is composed by:

Closed classes:

c d

e

Recurrent classes:

{c,d},{e}

Transient classes:

{a,b}

The Markov chain is not irreducible

The absorbing states are: e

#### 4.4. First passage time distributions and means

Feres (2007) provides code to compute first passage time (within  $1, 2, \dots, n$  steps) given the initial state to be  $i$ . The MATLAB listings translated into R on which the `firstPassage` function is based are:

```
R> .firstpassageKernel <- function(P, i, n){
R>   G <- P
R>   H <- P[i,]
R>   E <- 1 - diag(size(P)[2])
R>   for (m in 2:n) {
R>     G <- P %*% (G * E)
R>     H <- rbind(H, G[i,])
R>   }
R>   return(H)
R> }
```

We conclude that the probability for the *first* rainy day to be the third one, given that the current state is sunny, is given by:

```
R> firstPassagePdF <- firstPassage(object = mcWeather, state = "sunny",
R+                               n = 10)
R> firstPassagePdF[3, 3]

[1] 0.121
```

To compute the *mean* first passage times, i.e. the expected number of days before it rains given that today is sunny, we can use the `meanFirstPassageTime` function:

```
R> meanFirstPassageTime(mcWeather)

      sunny   cloudy    rain
sunny 0.000000 4.285714 6.666667
cloudy 3.725490 0.000000 5.000000
rain   4.117647 2.857143 0.000000
```

indicating e.g. that the average number of days of sun or cloud before rain is 6.67 if we start counting from a sunny day, and 5 if we start from a cloudy day. Note that we can also specify one or more destination states:

```
R> meanFirstPassageTime(mcWeather, "rain")
```

```

      sunny    cloudy
6.666667 5.000000

```

The implementation follows the matrix solutions by ([Grinstead and Snell 2006](#)). We can check the result by averaging the first passage probability density function:

```

R> firstPassagePdF.long <- firstPassage(object = mcWeather, state = "sunny", n = 100)
R> sum(firstPassagePdF.long[, "rain"] * 1:100)

[1] 6.666664

```

#### 4.5. Mean recurrence time

The `meanRecurrenceTime` method gives the first mean recurrence time (expected number of steps to go back to a state if it was the initial one) for each recurrent state in the transition probabilities matrix for a DTMC. Let's see an example:

```

R> meanRecurrenceTime(mcWeather)

      sunny    cloudy    rain
2.156863 3.142857 4.583333

```

Another example, with not all of its states being recurrent:

```

R> recurrentStates(probMc)

[1] "a" "b" "c" "f" "g" "i"

R> meanRecurrenceTime(probMc)

      f      b      g      i      a      c
1.000000 2.555556 2.875000 3.833333 1.500000 3.000000

```

#### 4.6. Absorption probabilities and mean absorption time

We are going to use the Drunkard's random walk from ([Grinstead and Snell 2006](#)). We have a drunk person walking through the street. Each move the person does, if they have not arrived to either home (corner 1) or to the bar (corner 5) could be to the left corner or to the right one, with equal probability. In case of arrival to the bar or to home, the person stays there.

```

R> drunkProbs <- matlab::zeros(5, 5)
R> drunkProbs[1,1] <- drunkProbs[5,5] <- 1
R> drunkProbs[2,1] <- drunkProbs[2,3] <- 1/2
R> drunkProbs[3,2] <- drunkProbs[3,4] <- 1/2
R> drunkProbs[4,3] <- drunkProbs[4,5] <- 1/2
R>
R> drunkMc <- new("markovchain", transitionMatrix = drunkProbs)
R> drunkMc

```

Unnamed Markov chain

A 5 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3, 4, 5

The transition matrix (by rows) is defined as follows:

	1	2	3	4	5
1	1.0	0.0	0.0	0.0	0.0
2	0.5	0.0	0.5	0.0	0.0
3	0.0	0.5	0.0	0.5	0.0
4	0.0	0.0	0.5	0.0	0.5
5	0.0	0.0	0.0	0.0	1.0

Recurrent (in fact absorbing states) are:

```
R> recurrentStates(drunkMc)
```

```
[1] "1" "5"
```

Transient states are the rest:

```
R> transientStates(drunkMc)
```

```
[1] "2" "3" "4"
```

The probability of either being absorbed by the bar or by the sofa at home are:

```
R> absorptionProbabilities(drunkMc)
```

	1	5
2	0.75	0.25
3	0.50	0.50
4	0.25	0.75

which means that the probability of arriving home / bar is inversely proportional to the distance to each one.

But we also would like to know how much time does the person take to arrive there, which can be done with `meanAbsorptionTime`:

```
R> meanAbsorptionTime(drunkMc)
```

```
2 3 4
3 4 3
```

So it would take 3 steps to arrive to the destiny if the person is either in the second or fourth corner, and 4 steps in case of being at the same distance from home than to the bar.

#### 4.7. Commitor probability

The committor probability tells us the probability to reach a given state before another given. Suppose that we start in a cloudy day, the probabilities of experiencing a rainy day before a sunny one is 0.5:

```
R> committorAB(mcWeather,3,1)
```

```
sunny cloudy rain
0.0      0.5    1.0
```

#### 4.8. Hitting probabilities

Rewriting the system (9) as:

$$A = \left( \begin{array}{c|c|c|c} A_1 & 0 & \dots & 0 \\ \hline 0 & A_2 & \dots & 0 \\ \hline \vdots & \vdots & \ddots & 0 \\ \hline 0 & 0 & \dots & A_n \end{array} \right)$$

$$\begin{aligned} A_1 &= \begin{pmatrix} -1 & p_{1,2} & p_{1,3} & \dots & p_{1,n} \\ 0 & (p_{2,2} - 1) & p_{2,3} & \dots & p_{2,n} \\ \vdots & \vdots & \vdots & \ddots & \vdots \\ 0 & p_{n,2} & p_{n,3} & \dots & (p_{n,n} - 1) \end{pmatrix} \\ A_2 &= \begin{pmatrix} (p_{1,1} - 1) & 0 & p_{1,3} & \dots & p_{1,n} \\ p_{2,1} & -1 & p_{2,3} & \dots & p_{2,n} \\ \vdots & \vdots & \vdots & \ddots & \vdots \\ p_{n,1} & 0 & p_{n,3} & \dots & (p_{n,n} - 1) \end{pmatrix} \\ &\vdots \\ A_n &= \begin{pmatrix} (p_{1,1} - 1) & p_{1,2} & p_{1,3} & \dots & 0 \\ p_{2,1} & (p_{2,2} - 1) & p_{2,3} & \dots & 0 \\ \vdots & \vdots & \vdots & \ddots & \vdots \\ p_{n,1} & p_{n,2} & p_{n,3} & \dots & -1 \end{pmatrix} \end{aligned}$$

$$X_j = \begin{pmatrix} h_{1,j} \\ h_{2,j} \\ \vdots \\ h_{n,j} \end{pmatrix} \quad C_j = - \begin{pmatrix} p_{1,j} \\ p_{2,j} \\ \vdots \\ p_{n,j} \end{pmatrix}$$

we end up having to solve the block systems:

$$A_j \cdot X_j = C_j \tag{14}$$

Let us imagine the  $i$ -th state has transition probabilities:  $(0, \dots, 0, 1, 0, \dots, 0)$ . Then that same row would turn into  $(0, 0, \dots, 0)$  for some block, thus obtaining a singular matrix. Another case which may give us problems could be: state  $i$  has the following transition

probabilities:  $(0, \dots, 0, \underset{j}{1}, 0, \dots, 0)$  and the state  $j$  has the following transition probabilities:  $(0, \dots, 0, \underset{i}{1}, 0, \dots, 0)$ . Then when building some blocks we will end up with rows:

$$\begin{aligned} & (0, \dots, 0, \underset{i}{-1}, 0, \dots, 0, \underset{j}{1}, 0, \dots, 0) \\ & (0, \dots, 0, \underset{i}{1}, 0, \dots, 0, \underset{j}{-1}, 0, \dots, 0) \end{aligned}$$

which are linearly dependent. Our hypothesis is that if we treat the closed communicating classes differently, we *might* delete the linearity in the system. If we have a closed communicating class  $C_u$ , then  $h_{i,j} = 1$  for all  $i, j \in C_u$  and  $h_{k,j} = 0$  for all  $k \notin C_u$ . Then we can set  $X_u$  appropriately and solve the other  $X_v$  using those values.

The method in charge of that in `markovchain` package is `hittingProbabilities`, which receives a Markov chain and computes the matrix  $(h_{ij})_{i,j=1,\dots,n}$  where  $S = \{s_1, \dots, s_n\}$  is the set of all states of the chain.

For the following chain:

```
R> M <- matlab::zeros(5, 5)
R> M[1,1] <- M[5,5] <- 1
R> M[2,1] <- M[2,3] <- 1/2
R> M[3,2] <- M[3,4] <- 1/2
R> M[4,2] <- M[4,5] <- 1/2
R>
R> hittingTest <- new("markovchain", transitionMatrix = M)
R> hittingProbabilities(hittingTest)
```

	1	2	3	4	5
1	1.0	0.000	0.000	0.0000000	0.0
2	0.8	0.375	0.500	0.3333333	0.2
3	0.6	0.750	0.375	0.6666667	0.4
4	0.4	0.500	0.250	0.1666667	0.6
5	0.0	0.000	0.000	0.0000000	1.0

we want to compute the hitting probabilities. That can be done with:

```
R> hittingProbabilities(hittingTest)
```

	1	2	3	4	5
1	1.0	0.000	0.000	0.0000000	0.0
2	0.8	0.375	0.500	0.3333333	0.2
3	0.6	0.750	0.375	0.6666667	0.4
4	0.4	0.500	0.250	0.1666667	0.6
5	0.0	0.000	0.000	0.0000000	1.0

In the case of the `mcWeather` Markov chain we would obtain a matrix with all its elements set to 1. That makes sense (and is desirable) since if today is sunny, we expect it would be sunny again at certain point in the time, and the same with rainy weather (that way we assure good harvests):

```
R> hittingProbabilities(mcWeather)
```

```
      sunny cloudy rain
sunny      1      1      1
cloudy      1      1      1
rain        1      1      1
```

## 5. Statistical analysis

Table 5 lists the functions and methods implemented within the package which help to fit, simulate and predict DTMC.

Function	Purpose
<code>markovchainFit</code>	Function to return fitted Markov chain for a given sequence.
<code>predict</code>	Method to calculate predictions from <code>markovchain</code> or <code>markovchainList</code> objects.
<code>rmarkovchain</code>	Function to sample from <code>markovchain</code> or <code>markovchainList</code> objects.

Table 5: The **markovchain** statistical functions.

### 5.1. Simulation

Simulating a random sequence from an underlying DTMC is quite easy thanks to the function `rmarkovchain`. The following code generates a year of weather states according to `mcWeather` underlying stochastic process.

```
R> weathersOfDays <- rmarkovchain(n = 365, object = mcWeather, t0 = "sunny")
R> weathersOfDays[1:30]

[1] "sunny" "sunny" "sunny" "sunny" "sunny" "sunny" "sunny" "cloudy"
[9] "sunny" "sunny" "sunny" "sunny" "sunny" "sunny" "sunny" "cloudy"
[17] "sunny" "sunny" "sunny" "sunny" "sunny" "cloudy" "cloudy" "rain"
[25] "cloudy" "rain" "cloudy" "rain" "cloudy" "rain"
```

Similarly, it is possible to simulate one or more sequences from a non-homogeneous Markov chain, as the following code (applied on CCHC example) exemplifies.

```
R> patientStates <- rmarkovchain(n = 5, object = mcCCRC, t0 = "H",
R+                               include.t0 = TRUE)
R> patientStates[1:10,]

      iteration values
1           1      H
2           1      H
3           1      H
```

4	1	D
5	1	D
6	2	H
7	2	H
8	2	I
9	2	D
10	2	D

Two advance parameters are available to the `rmarkovchain` method which helps you decide which implementation to use. There are four options available : R, R in parallel, C++ and C++ in parallel. Two boolean parameters `useRcpp` and `parallel` will decide which implementation will be used. Default is `useRcpp = TRUE` and `parallel = FALSE` i.e. C++ implementation. The C++ implementation is generally faster than the R implementation. If you have multicore processors then you can take advantage of `parallel` parameter by setting it to `TRUE`. When both `Rcpp=TRUE` and `parallel=TRUE` the parallelization has been carried out using **RcppParallel** package ([Allaire, Francois, Ushey, Vandenbrouck, Geelnard, and Intel 2016](#)).

## 5.2. Estimation

A time homogeneous Markov chain can be fit from given data. Four methods have been implemented within current version of **markovchain** package: maximum likelihood, maximum likelihood with Laplace smoothing, Bootstrap approach, maximum a posteriori.

Equation 15 shows the maximum likelihood estimator (MLE) of the  $p_{ij}$  entry, where the  $n_{ij}$  element consists in the number sequences  $(X_t = s_i, X_{t+1} = s_j)$  found in the sample, that is

$$\hat{p}_{ij}^{MLE} = \frac{n_{ij}}{\sum_{u=1}^k n_{iu}}. \quad (15)$$

Equation (16) shows the `standardError` of the MLE ([Skuriat-Olechnowska 2005](#)).

$$SE_{ij} = \frac{\hat{p}_{ij}^{MLE}}{\sqrt{n_{ij}}} \quad (16)$$

```
R> weatherFittedMLE <- markovchainFit(data = weathersOfDays, method = "mle", name = "Weather")
R> weatherFittedMLE$estimate
```

Weather MLE

A 3 - dimensional discrete Markov Chain defined by the following states:

cloudy, rain, sunny

The transition matrix (by rows) is defined as follows:

	cloudy	rain	sunny
cloudy	0.3809524	0.30476190	0.3142857
rain	0.4347826	0.34782609	0.2173913
sunny	0.1842105	0.06842105	0.7473684

```
R> weatherFittedMLE$standardError
```

	cloudy	rain	sunny
cloudy	0.06023386	0.05387480	0.05471012
rain	0.07938008	0.07099970	0.05613019
sunny	0.03113726	0.01897659	0.06271776

The Laplace smoothing approach is a variation of the MLE, where the  $n_{ij}$  is substituted by  $n_{ij} + \alpha$  (see Equation 17), being  $\alpha$  an arbitrary positive stabilizing parameter.

$$\hat{p}_{ij}^{LS} = \frac{n_{ij} + \alpha}{\sum_{u=1}^k (n_{iu} + \alpha)} \quad (17)$$

```
R> weatherFittedLAPLACE <- markovchainFit(data = weathersOfDays,
R+                                     method = "laplace", laplacian = 0.01,
R+                                     name = "Weather LAPLACE")
R> weatherFittedLAPLACE$estimate
```

Weather LAPLACE

A 3 - dimensional discrete Markov Chain defined by the following states:

cloudy, rain, sunny

The transition matrix (by rows) is defined as follows:

	cloudy	rain	sunny
cloudy	0.3809388	0.30477007	0.3142912
rain	0.4347385	0.34781979	0.2174417
sunny	0.1842341	0.06846287	0.7473031

(NOTE: The Confidence Interval option is enabled by default. Remove this option to fasten computations.) Both MLE and Laplace approach are based on the `createSequenceMatrix` functions that returns the raw counts transition matrix.

```
R> createSequenceMatrix(stringchar = weathersOfDays)
```

	cloudy	rain	sunny
cloudy	40	32	33
rain	30	24	15
sunny	35	13	142

`stringchar` could contain NA values, and the transitions containing NA would be ignored.

An issue occurs when the sample contains only one realization of a state (say  $X_\beta$ ) which is located at the end of the data sequence, since it yields to a row of zero (no sample to estimate the conditional distribution of the transition). In this case the estimated transition matrix is corrected assuming  $p_{\beta,j} = 1/k$ , being  $k$  the possible states.

Create sequence matrix can also be used to obtain raw count transition matrices from a given  $n * 2$  matrix as the following example shows:

```
R> myMatr<-matrix(c("a","b","b","a","a","b","b","b","b","a","a","a","b","a"),ncol=2)
R> createSequenceMatrix(stringchar = myMatr,toRowProbs = TRUE)
```

```
      a      b
a 0.6666667 0.3333333
b 0.5000000 0.5000000
```

A bootstrap estimation approach has been developed within the package in order to provide an indication of the variability of  $\hat{p}_{ij}$  estimates. The bootstrap approach implemented within the **markovchain** package follows these steps:

1. bootstrap the data sequences following the conditional distributions of states estimated from the original one. The default bootstrap samples is 10, as specified in **nboot** parameter of **markovchainFit** function.
2. apply MLE estimation on bootstrapped data sequences that are saved in **bootStrapSamples** slot of the returned list.
3. the  $p^{BOOTSTRAP}_{ij}$  is the average of all  $p^{MLE}_{ij}$  across the **bootStrapSamples** list, normalized by row. A **standardError** of  $p^{\hat{MLE}}_{ij}$  estimate is provided as well.

```
R> weatherFittedBOOT <- markovchainFit(data = weathersOfDays,
R+                               method = "bootstrap", nboot = 20)
R> weatherFittedBOOT$estimate
```

BootStrap Estimate

A 3 - dimensional discrete Markov Chain defined by the following states:

cloudy, rain, sunny

The transition matrix (by rows) is defined as follows:

```
      cloudy      rain      sunny
cloudy 0.3716983 0.32578316 0.3025186
rain   0.4364513 0.34692534 0.2166234
sunny  0.1857465 0.06606602 0.7481875
```

```
R> weatherFittedBOOT$standardError
```

```
      cloudy      rain      sunny
cloudy 0.009086617 0.011203457 0.008135989
rain   0.016977093 0.013714739 0.010027565
sunny  0.006428882 0.005404397 0.007837309
```

The bootstrapping process can be done in parallel thanks to **RcppParallel** package ([Allaire et al. 2016](#)). Parallelized implementation is definitively suggested when the data sample size or the required number of bootstrap runs is high.

```
R> weatherFittedBOOTParallel <- markovchainFit(data = weathersOfDays,
R>                               method = "bootstrap", nboot = 200,
R>                               parallel = TRUE)
R> weatherFittedBOOTParallel$estimate
R> weatherFittedBOOTParallel$standardError
```

The parallel bootstrapping uses all the available cores on a machine by default. However, it is also possible to tune the number of threads used. Note that this should be done in R before calling the `markovchainFit` function. For example, the following code will set the number of threads to 4.

```
R> RcppParallel::setNumThreads(2)
```

For more details, please refer to **RcppParallel** web site.

For all the fitting methods, the `logLikelihood` (Skuriat-Olechnowska 2005) denoted in Equation 18 is provided.

$$LLH = \sum_{i,j} n_{ij} * \log(p_{ij}) \quad (18)$$

where  $n_{ij}$  is the entry of the frequency matrix and  $p_{ij}$  is the entry of the transition probability matrix.

```
R> weatherFittedMLE$logLikelihood
```

```
[1] -323.4714
```

```
R> weatherFittedBOOT$logLikelihood
```

```
[1] -323.5894
```

Confidence matrices of estimated parameters (parametric for MLE, non - parametric for Boot-Strap) are available as well. The `confidenceInterval` is provided with the two matrices: `lowerEndpointMatrix` and `upperEndpointMatrix`. The confidence level (CL) is 0.95 by default and can be given as an argument of the function `markovchainFit`. This is used to obtain the standard score (z-score). From classical inference theory, if  $ci$  is the level of confidence required assuming normal distribution the  $zscore(ci)$  solves  $\Phi(1 - (\frac{1-ci}{2}))$  Equations 19 and 20 (Skuriat-Olechnowska 2005) show the `confidenceInterval` of a fitting. Note that each entry of the matrices is bounded between 0 and 1.

$$LowerEndpoint_{ij} = p_{ij} - zscore(CL) * SE_{ij} \quad (19)$$

$$UpperEndpoint_{ij} = p_{ij} + zscore(CL) * SE_{ij} \quad (20)$$

```
R> weatherFittedMLE$confidenceInterval
```

```
NULL
```

```
R> weatherFittedBOOT$confidenceInterval
```

```
$confidenceLevel
[1] 0.95
```

```
$lowerEndpointMatrix
      cloudy      rain      sunny
cloudy 0.3567521 0.30735511 0.2891361
rain   0.4085264 0.32436660 0.2001295
sunny  0.1751719 0.05717657 0.7352963
```

```
$upperEndpointMatrix
      cloudy      rain      sunny
cloudy 0.3866444 0.34421121 0.3159011
rain   0.4643761 0.36948408 0.2331173
sunny  0.1963211 0.07495546 0.7610787
```

A special function, `multinomialConfidenceIntervals`, has been written in order to obtain multinomial wise confidence intervals. The code has been based on and Rcpp translation of package's **MultinomialCI** functions [Villacorta \(2012\)](#) that were themselves based on the [Sison and Glaz \(1995\)](#) paper.

```
R> multinomialConfidenceIntervals(transitionMatrix =
R+      weatherFittedMLE$estimate@transitionMatrix,
R+      countsTransitionMatrix = createSequenceMatrix(weathersOfDays))
```

```
$confidenceLevel
[1] 0.95
```

```
$lowerEndpointMatrix
      cloudy      rain      sunny
cloudy 0.2857143 0.20952381 0.2190476
rain   0.3188406 0.23188406 0.1014493
sunny  0.1263158 0.01052632 0.6894737
```

```
$upperEndpointMatrix
      cloudy      rain      sunny

```

The functions for fitting DTMC have mostly been rewritten in C++ using **Rcpp** [Eddelbuettel \(2013\)](#) since version 0.2.

It is also possible to fit a DTMC object from `matrix` or `data.frame` objects as shown in following code.

```
R> data(holson)
R> singleMc<-markovchainFit(data=holson[,2:12],name="holson")
```

The same applies for `markovchainList`.

```
R> mcListFit<-markovchainListFit(data=holson[,2:6],name="holson")
R> mcListFit$estimate
```

```
holson  list of Markov chain(s)

Markovchain 94

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 95

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 96

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 97

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 0.8 0.2

2 0.5 0.5

Markovchain 98

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```

      1    2
1 0.75 0.25
2 1.00 0.00

```

Markovchain 99

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```

      1 2
1 1 0
2 1 0

```

Markovchain 100

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

```

      1 3
1 0.0 1.0
3 0.5 0.5

```

Markovchain 101

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

```

      1 3
1 0.5 0.5
3 1.0 0.0

```

Markovchain 102

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```

      1
1 1

```

Markovchain 103

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```

      1
1 1

```

Markovchain 104

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 105

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 106

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 107

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 108

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 0.8 0.2

2 0.5 0.5

Markovchain 109

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

```
1 1 0
```

```
2 1 0
```

```
Markovchain 110
```

```
Unnamed Markov chain
```

```
A 2 - dimensional discrete Markov Chain defined by the following states:
```

```
1, 3
```

```
The transition matrix (by rows) is defined as follows:
```

```
1 3
```

```
1 0.0 1.0
```

```
3 0.5 0.5
```

```
Markovchain 111
```

```
Unnamed Markov chain
```

```
A 2 - dimensional discrete Markov Chain defined by the following states:
```

```
1, 3
```

```
The transition matrix (by rows) is defined as follows:
```

```
1 3
```

```
1 0.5 0.5
```

```
3 1.0 0.0
```

```
Markovchain 112
```

```
Unnamed Markov chain
```

```
A 3 - dimensional discrete Markov Chain defined by the following states:
```

```
1, 2, 3
```

```
The transition matrix (by rows) is defined as follows:
```

```
1 2 3
```

```
1 0.0000000 0.8000000 0.2000000
```

```
2 0.3333333 0.3333333 0.3333333
```

```
3 0.3333333 0.3333333 0.3333333
```

```
Markovchain 113
```

```
Unnamed Markov chain
```

```
A 3 - dimensional discrete Markov Chain defined by the following states:
```

```
1, 2, 3
```

```
The transition matrix (by rows) is defined as follows:
```

```
1 2 3
```

```
1 0.3333333 0.3333333 0.3333333
```

```
2 0.7500000 0.2500000 0.0000000
```

```
3 1.0000000 0.0000000 0.0000000
```

```
Markovchain 114
```

```
Unnamed Markov chain
```

```
A 2 - dimensional discrete Markov Chain defined by the following states:
```

```
1, 2
```

```
The transition matrix (by rows) is defined as follows:
```

```
1 2
```

```

1 1 0
2 1 0

```

Markovchain 115

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```

1
1 1

```

Markovchain 116

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

```

1 3
1 0.0 1.0
3 0.5 0.5

```

Markovchain 117

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

```

1 3
1 0.5 0.5
3 1.0 0.0

```

Markovchain 118

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

```

1 2 3
1 0.0000000 0.6000000 0.4000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

```

Markovchain 119

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

```

1 2 3
1 0.3333333 0.3333333 0.3333333
2 0.6666667 0.3333333 0.0000000

```

```
3 0.0000000 1.0000000 0.0000000
```

```
Markovchain 120
```

```
Unnamed Markov chain
```

```
A 2 - dimensional discrete Markov Chain defined by the following states:
1, 2
```

```
The transition matrix (by rows) is defined as follows:
```

```
1 2
1 1 0
2 1 0
```

```
Markovchain 121
```

```
Unnamed Markov chain
```

```
A 2 - dimensional discrete Markov Chain defined by the following states:
1, 2
```

```
The transition matrix (by rows) is defined as follows:
```

```
1 2
1 0.0 1.0
2 0.5 0.5
```

```
Markovchain 122
```

```
Unnamed Markov chain
```

```
A 1 - dimensional discrete Markov Chain defined by the following states:
2
```

```
The transition matrix (by rows) is defined as follows:
```

```
2
2 1
```

```
Markovchain 123
```

```
Unnamed Markov chain
```

```
A 2 - dimensional discrete Markov Chain defined by the following states:
1, 2
```

```
The transition matrix (by rows) is defined as follows:
```

```
1 2
1 0.5 0.5
2 1.0 0.0
```

```
Markovchain 124
```

```
Unnamed Markov chain
```

```
A 1 - dimensional discrete Markov Chain defined by the following states:
1
```

```
The transition matrix (by rows) is defined as follows:
```

```
1
1 1
```

```
Markovchain 125
```

```
Unnamed Markov chain
```

A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 2

The transition matrix (by rows) is defined as follows:

	1	2
1	0.8	0.2
2	0.5	0.5

Markovchain 126

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 2

The transition matrix (by rows) is defined as follows:

	1	2
1	1	0
2	1	0

Markovchain 127

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:  
1

The transition matrix (by rows) is defined as follows:

	1
1	1

Markovchain 128

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:  
1

The transition matrix (by rows) is defined as follows:

	1
1	1

Markovchain 129

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:  
1

The transition matrix (by rows) is defined as follows:

	1
1	1

Markovchain 130

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 2

The transition matrix (by rows) is defined as follows:

	1	2
1	0.4	0.6

```
2 0.5 0.5
```

```
Markovchain 131
```

```
Unnamed Markov chain
```

```
A 2 - dimensional discrete Markov Chain defined by the following states:
```

```
1, 2
```

```
The transition matrix (by rows) is defined as follows:
```

```
1 2
```

```
1 1 0
```

```
2 1 0
```

```
Markovchain 132
```

```
Unnamed Markov chain
```

```
A 2 - dimensional discrete Markov Chain defined by the following states:
```

```
1, 3
```

```
The transition matrix (by rows) is defined as follows:
```

```
1 3
```

```
1 0.8 0.2
```

```
3 0.5 0.5
```

```
Markovchain 133
```

```
Unnamed Markov chain
```

```
A 3 - dimensional discrete Markov Chain defined by the following states:
```

```
1, 2, 3
```

```
The transition matrix (by rows) is defined as follows:
```

```
1 2 3
```

```
1 0.7500000 0.2500000 0.0000000
```

```
2 0.3333333 0.3333333 0.3333333
```

```
3 1.0000000 0.0000000 0.0000000
```

```
Markovchain 134
```

```
Unnamed Markov chain
```

```
A 2 - dimensional discrete Markov Chain defined by the following states:
```

```
1, 2
```

```
The transition matrix (by rows) is defined as follows:
```

```
1 2
```

```
1 1 0
```

```
2 1 0
```

```
Markovchain 135
```

```
Unnamed Markov chain
```

```
A 1 - dimensional discrete Markov Chain defined by the following states:
```

```
1
```

```
The transition matrix (by rows) is defined as follows:
```

```
1
```

```
1 1
```

Markovchain 136

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 137

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 0.6 0.4

2 0.5 0.5

Markovchain 138

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

1 2 3

1 0.3333333 0.6666667 0.0000000

2 0.0000000 0.5000000 0.5000000

3 0.3333333 0.3333333 0.3333333

Markovchain 139

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

1 2 3

1 0 0 1

2 0 0 1

3 0 0 1

Markovchain 140

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

1 2 3

1 0.3333333 0.3333333 0.3333333

2 0.3333333 0.3333333 0.3333333

3 0.6000000 0.4000000 0.0000000

Markovchain 141

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 1 0

2 1 0

Markovchain 142

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 143

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

1 3

1 0.0 1.0

3 0.5 0.5

Markovchain 144

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

1 3

1 0.5 0.5

3 1.0 0.0

Markovchain 145

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.0000000	0.6000000	0.4000000

2	0.3333333	0.3333333	0.3333333
---	-----------	-----------	-----------

3	0.3333333	0.3333333	0.3333333
---	-----------	-----------	-----------

Markovchain 146

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:  
1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.3333333	0.3333333	0.3333333
2	1.0000000	0.0000000	0.0000000
3	1.0000000	0.0000000	0.0000000

Markovchain 147

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 3

The transition matrix (by rows) is defined as follows:

	1	3
1	0.0	1.0
3	0.5	0.5

Markovchain 148

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 3

The transition matrix (by rows) is defined as follows:

	1	3
1	0.5	0.5
3	1.0	0.0

Markovchain 149

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 3

The transition matrix (by rows) is defined as follows:

	1	3
1	0.0	1.0
3	0.5	0.5

Markovchain 150

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:  
1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.3333333	0.3333333	0.3333333
2	0.3333333	0.3333333	0.3333333
3	0.2000000	0.4000000	0.4000000

Markovchain 151

Unnamed Markov chain

```

A 3 - dimensional discrete Markov Chain defined by the following states:
1, 2, 3
The transition matrix (by rows) is defined as follows:
  1 2 3
1 1 0 0
2 1 0 0
3 1 0 0

```

```
Markovchain 152
```

```
Unnamed Markov chain
```

```

A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
  1
1 1

```

```
Markovchain 153
```

```
Unnamed Markov chain
```

```

A 2 - dimensional discrete Markov Chain defined by the following states:
1, 3
The transition matrix (by rows) is defined as follows:
  1 3
1 0.0 1.0
3 0.5 0.5

```

```
Markovchain 154
```

```
Unnamed Markov chain
```

```

A 1 - dimensional discrete Markov Chain defined by the following states:
3
The transition matrix (by rows) is defined as follows:
  3
3 1

```

```
Markovchain 155
```

```
Unnamed Markov chain
```

```

A 3 - dimensional discrete Markov Chain defined by the following states:
1, 2, 3
The transition matrix (by rows) is defined as follows:
      1      2      3
1 0.3333333 0.3333333 0.3333333
2 0.3333333 0.3333333 0.3333333
3 0.6000000 0.4000000 0.0000000

```

```
Markovchain 156
```

```
Unnamed Markov chain
```

```

A 3 - dimensional discrete Markov Chain defined by the following states:
1, 2, 3

```

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.0000000	0.0000000	1.0000000
2	0.0000000	0.0000000	1.0000000
3	0.3333333	0.3333333	0.3333333

Markovchain 157

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

	1	3
1	0.5	0.5
3	1.0	0.0

Markovchain 158

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

	1
1	1

Markovchain 159

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

	1
1	1

Markovchain 160

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

	1
1	1

Markovchain 161

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

	1	3
1	0.0	1.0
3	0.5	0.5

Markovchain 162

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

1 3

1 0.5 0.5

3 1.0 0.0

Markovchain 163

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 164

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 165

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

1 3

1 0.0 1.0

3 0.5 0.5

Markovchain 166

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

1 3

1 0.5 0.5

3 1.0 0.0

Markovchain 167

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.0000000	0.4000000	0.6000000
2	0.3333333	0.3333333	0.3333333
3	0.3333333	0.3333333	0.3333333

Markovchain 168

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.3333333	0.3333333	0.3333333
2	1.0000000	0.0000000	0.0000000
3	1.0000000	0.0000000	0.0000000

Markovchain 169

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

	1
1	1

Markovchain 170

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

	1
1	1

Markovchain 171

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

	1
1	1

Markovchain 172

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

	1
1	1

1 1

Markovchain 173

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 3

The transition matrix (by rows) is defined as follows:

1 3  
1 0.0 1.0  
3 0.5 0.5

Markovchain 174

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 3

The transition matrix (by rows) is defined as follows:

1 3  
1 0.5 0.5  
3 1.0 0.0

Markovchain 175

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 3

The transition matrix (by rows) is defined as follows:

1 3  
1 0.0 1.0  
3 0.5 0.5

Markovchain 176

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 3

The transition matrix (by rows) is defined as follows:

1 3  
1 0.5 0.5  
3 1.0 0.0

Markovchain 177

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 3

The transition matrix (by rows) is defined as follows:

1 3  
1 0.0 1.0  
3 0.5 0.5

Markovchain 178

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

3

The transition matrix (by rows) is defined as follows:

3

3 1

Markovchain 179

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

1 3

1 0.5 0.5

3 1.0 0.0

Markovchain 180

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 181

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 0.2 0.8

2 0.5 0.5

Markovchain 182

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 1 0

2 1 0

Markovchain 183

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

```

      1  3
1 0.0 1.0
3 0.5 0.5

```

Markovchain 184

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
2, 3

The transition matrix (by rows) is defined as follows:

```

      2  3
2 0.5 0.5
3 0.2 0.8

```

Markovchain 185

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
2, 3

The transition matrix (by rows) is defined as follows:

```

      2  3
2 0.00 1.00
3 0.75 0.25

```

Markovchain 186

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
2, 3

The transition matrix (by rows) is defined as follows:

```

      2 3
2 0 1
3 0 1

```

Markovchain 187

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 3

The transition matrix (by rows) is defined as follows:

```

      1  3
1 0.5 0.5
3 1.0 0.0

```

Markovchain 188

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:  
1

The transition matrix (by rows) is defined as follows:

```

1

```

1 1

Markovchain 189

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

1 3

1 0.0 1.0

3 0.5 0.5

Markovchain 190

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

2, 3

The transition matrix (by rows) is defined as follows:

2 3

2 0.5 0.5

3 0.2 0.8

Markovchain 191

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

2, 3

The transition matrix (by rows) is defined as follows:

2 3

2 0 1

3 0 1

Markovchain 192

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

1 3

1 0.5 0.5

3 1.0 0.0

Markovchain 193

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

1 3

1 0.0 1.0

3 0.5 0.5

Markovchain 194

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

1 3

1 0.5 0.5

3 1.0 0.0

Markovchain 195

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 196

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 197

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 198

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 0.0 1.0

2 0.5 0.5

Markovchain 199

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```

      1  2
1 0.5 0.5
2 1.0 0.0

```

Markovchain 200

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```

      1
1 1

```

Markovchain 201

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```

      1  2
1 0.6 0.4
2 0.5 0.5

```

Markovchain 202

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```

      1  2
1 1 0
2 1 0

```

Markovchain 203

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```

      1
1 1

```

Markovchain 204

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```

      1
1 1

```

Markovchain 205

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 206

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 207

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 0.8 0.2

2 0.5 0.5

Markovchain 208

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 0.75 0.25

2 1.00 0.00

Markovchain 209

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 1 0

2 1 0

Markovchain 210

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1  
1 1

Markovchain 211

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1  
1 1

Markovchain 212

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1  
1 1

Markovchain 213

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1  
1 1

Markovchain 214

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1  
1 1

Markovchain 215

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1  
1 1

Markovchain 216

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```
1
1 1
```

Markovchain 217

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

```
1
The transition matrix (by rows) is defined as follows:
1
1 1
```

Markovchain 218

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

```
1
The transition matrix (by rows) is defined as follows:
1
1 1
```

Markovchain 219

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

```
1
The transition matrix (by rows) is defined as follows:
1
1 1
```

Markovchain 220

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

```
1, 2
The transition matrix (by rows) is defined as follows:
1 2
1 0.6 0.4
2 0.5 0.5
```

Markovchain 221

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

```
1, 2
The transition matrix (by rows) is defined as follows:
1 2
1 1 0
2 1 0
```

Markovchain 222

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 0.2 0.8

2 0.5 0.5

Markovchain 223

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 1 0

2 1 0

Markovchain 224

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 225

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 226

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 227

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 228

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 229

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 230

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 231

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

1 3

1 0.0 1.0

3 0.5 0.5

Markovchain 232

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

1 3

1 0.5 0.5

3 1.0 0.0

Markovchain 233

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.0000000	0.2000000	0.8000000
2	0.3333333	0.3333333	0.3333333
3	0.3333333	0.3333333	0.3333333

Markovchain 234

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.3333333	0.3333333	0.3333333
2	1.0000000	0.0000000	0.0000000
3	1.0000000	0.0000000	0.0000000

Markovchain 235

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

	1
1	1

Markovchain 236

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

	1
1	1

Markovchain 237

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.2000000	0.2000000	0.6000000
2	0.3333333	0.3333333	0.3333333
3	0.3333333	0.3333333	0.3333333

Markovchain 238

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

```

  1 2 3
1 1 0 0
2 1 0 0
3 1 0 0

```

Markovchain 239

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```

  1 2
1 0.6 0.4
2 0.5 0.5

```

Markovchain 240

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```

  1 2
1 1 0
2 1 0

```

Markovchain 241

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```

  1
1 1

```

Markovchain 242

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```

  1
1 1

```

Markovchain 243

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```

  1 2
1 0.6 0.4

```

2 0.5 0.5

Markovchain 244

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 1 0

2 1 0

Markovchain 245

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

1 3

1 0.0 1.0

3 0.5 0.5

Markovchain 246

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

3

The transition matrix (by rows) is defined as follows:

3

3 1

Markovchain 247

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

1 3

1 0.5 0.5

3 1.0 0.0

Markovchain 248

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 249

Unnamed Markov chain

```

A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
1
1 1

```

```
Markovchain 250
```

```
Unnamed Markov chain
```

```

A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
1
1 1

```

```
Markovchain 251
```

```
Unnamed Markov chain
```

```

A 2 - dimensional discrete Markov Chain defined by the following states:
1, 2
The transition matrix (by rows) is defined as follows:
1 2
1 0.8 0.2
2 0.5 0.5

```

```
Markovchain 252
```

```
Unnamed Markov chain
```

```

A 2 - dimensional discrete Markov Chain defined by the following states:
1, 2
The transition matrix (by rows) is defined as follows:
1 2
1 0.5 0.5
2 0.0 1.0

```

```
Markovchain 253
```

```
Unnamed Markov chain
```

```

A 3 - dimensional discrete Markov Chain defined by the following states:
1, 2, 3
The transition matrix (by rows) is defined as follows:
1 2 3
1 0.0000000 0.0000000 1.0000000
2 0.0000000 0.0000000 1.0000000
3 0.3333333 0.3333333 0.3333333

```

```
Markovchain 254
```

```
Unnamed Markov chain
```

```

A 2 - dimensional discrete Markov Chain defined by the following states:
1, 3
The transition matrix (by rows) is defined as follows:

```

```

      1   3
1 0.5 0.5
3 1.0 0.0

```

Markovchain 255

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```

      1
1 1

```

Markovchain 256

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

```

      1      2      3
1 0.2000000 0.6000000 0.2000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

```

Markovchain 257

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

```

      1 2 3
1 1 0 0
2 1 0 0
3 1 0 0

```

Markovchain 258

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

```

      1      2      3
1 0.2000000 0.4000000 0.4000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

```

Markovchain 259

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

```

  1 2 3
1 1 0 0
2 1 0 0
3 1 0 0

```

Markovchain 260

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```

  1
1 1

```

Markovchain 261

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

```

      1      2      3
1 0.000000 0.400000 0.600000
2 0.333333 0.333333 0.333333
3 0.333333 0.333333 0.333333

```

Markovchain 262

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

```

      1      2      3
1 0.333333 0.333333 0.333333
2 1.000000 0.000000 0.000000
3 1.000000 0.000000 0.000000

```

Markovchain 263

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```

  1  2
1 0.6 0.4
2 0.5 0.5

```

Markovchain 264

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.0000000	0.0000000	1.0000000
2	0.0000000	0.0000000	1.0000000
3	0.3333333	0.3333333	0.3333333

Markovchain 265

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:  
1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.3333333	0.3333333	0.3333333
2	0.3333333	0.3333333	0.3333333
3	0.8000000	0.2000000	0.0000000

Markovchain 266

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 2

The transition matrix (by rows) is defined as follows:

	1	2
1	1	0
2	1	0

Markovchain 267

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 2

The transition matrix (by rows) is defined as follows:

	1	2
1	0.6	0.4
2	0.5	0.5

Markovchain 268

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 2

The transition matrix (by rows) is defined as follows:

	1	2
1	0.6666667	0.3333333
2	0.5000000	0.5000000

Markovchain 269

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 2

The transition matrix (by rows) is defined as follows:

```
1 2
1 1 0
2 1 0
```

Markovchain 270

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```
1 2
1 0.8 0.2
2 0.5 0.5
```

Markovchain 271

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```
1 2
1 1 0
2 1 0
```

Markovchain 272

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```
1
1 1
```

Markovchain 273

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```
1
1 1
```

Markovchain 274

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```
1 2
1 0.8 0.2
2 0.5 0.5
```

Markovchain 275

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.0000000	0.7500000	0.2500000
2	0.0000000	0.0000000	1.0000000
3	0.3333333	0.3333333	0.3333333

Markovchain 276

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.3333333	0.3333333	0.3333333
2	1.0000000	0.0000000	0.0000000
3	1.0000000	0.0000000	0.0000000

Markovchain 277

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

	1	2
1	0.0	1.0
2	0.5	0.5

Markovchain 278

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

2, 3

The transition matrix (by rows) is defined as follows:

	2	3
2	0.0	1.0
3	0.5	0.5

Markovchain 279

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

	1	3
1	0.5	0.5
3	1.0	0.0

Markovchain 280

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.0000000	0.6000000	0.4000000
2	0.3333333	0.3333333	0.3333333
3	0.3333333	0.3333333	0.3333333

Markovchain 281

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.3333333	0.3333333	0.3333333
2	1.0000000	0.0000000	0.0000000
3	1.0000000	0.0000000	0.0000000

Markovchain 282

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.0000000	0.2000000	0.8000000
2	0.3333333	0.3333333	0.3333333
3	0.3333333	0.3333333	0.3333333

Markovchain 283

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.3333333	0.3333333	0.3333333
2	1.0000000	0.0000000	0.0000000
3	1.0000000	0.0000000	0.0000000

Markovchain 284

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

	1
1	1

Markovchain 285

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.0000000	0.6000000	0.4000000
2	0.3333333	0.3333333	0.3333333
3	0.3333333	0.3333333	0.3333333

Markovchain 286

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.3333333	0.3333333	0.3333333
2	0.3333333	0.6666667	0.0000000
3	0.0000000	1.0000000	0.0000000

Markovchain 287

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

	1	2
1	1	0
2	1	0

Markovchain 288

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

	1
1	1

Markovchain 289

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

	1
1	1

Markovchain 290

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 291

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 0.6 0.4

2 0.5 0.5

Markovchain 292

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 0 1

2 0 1

Markovchain 293

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 0.5 0.5

2 1.0 0.0

Markovchain 294

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 0.2 0.8

2 0.5 0.5

Markovchain 295

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.0000000	1.0000000	0.0000000
2	0.0000000	0.0000000	1.0000000
3	0.3333333	0.3333333	0.3333333

Markovchain 296

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

2, 3

The transition matrix (by rows) is defined as follows:

	2	3
2	1.00	0.00
3	0.75	0.25

Markovchain 297

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.3333333	0.3333333	0.3333333
2	1.0000000	0.0000000	0.0000000
3	1.0000000	0.0000000	0.0000000

Markovchain 298

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

	1	2
1	0.6	0.4
2	0.5	0.5

Markovchain 299

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

	1	2
1	1	0
2	1	0

Markovchain 300

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```
1
1 1
```

Markovchain 301

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

```
1
The transition matrix (by rows) is defined as follows:
```

```
1
1 1
```

Markovchain 302

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

```
1, 2
The transition matrix (by rows) is defined as follows:
```

```
1 2
1 0.4 0.6
2 0.5 0.5
```

Markovchain 303

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

```
1, 2
The transition matrix (by rows) is defined as follows:
```

```
1 2
1 1 0
2 1 0
```

Markovchain 304

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

```
1
The transition matrix (by rows) is defined as follows:
```

```
1
1 1
```

Markovchain 305

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

```
1
The transition matrix (by rows) is defined as follows:
```

```
1
1 1
```

Markovchain 306

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 307

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 0.8 0.2

2 0.5 0.5

Markovchain 308

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

1 2 3

1 0.2500000 0.7500000 0.0000000

2 0.0000000 0.0000000 1.0000000

3 0.3333333 0.3333333 0.3333333

Markovchain 309

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

1 2 3

1 1 0 0

2 1 0 0

3 1 0 0

Markovchain 310

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 311

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

```

1
The transition matrix (by rows) is defined as follows:
1
1 1

Markovchain 312
Unnamed Markov chain
A 3 - dimensional discrete Markov Chain defined by the following states:
1, 2, 3
The transition matrix (by rows) is defined as follows:
      1      2      3
1 0.000000 0.800000 0.200000
2 0.333333 0.333333 0.333333
3 0.333333 0.333333 0.333333

Markovchain 313
Unnamed Markov chain
A 2 - dimensional discrete Markov Chain defined by the following states:
2, 3
The transition matrix (by rows) is defined as follows:
  2 3
2 0 1
3 0 1

Markovchain 314
Unnamed Markov chain
A 2 - dimensional discrete Markov Chain defined by the following states:
2, 3
The transition matrix (by rows) is defined as follows:
  2 3
2 0.5 0.5
3 0.6 0.4

Markovchain 315
Unnamed Markov chain
A 3 - dimensional discrete Markov Chain defined by the following states:
1, 2, 3
The transition matrix (by rows) is defined as follows:
      1      2      3
1 0.333333 0.333333 0.333333
2 1.000000 0.000000 0.000000
3 1.000000 0.000000 0.000000

Markovchain 316
Unnamed Markov chain
A 1 - dimensional discrete Markov Chain defined by the following states:
1

```

The transition matrix (by rows) is defined as follows:

```
1
1 1
```

Markovchain 317

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

```
1
The transition matrix (by rows) is defined as follows:
1
1 1
```

Markovchain 318

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

```
1
The transition matrix (by rows) is defined as follows:
1
1 1
```

Markovchain 319

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

```
1
The transition matrix (by rows) is defined as follows:
1
1 1
```

Markovchain 320

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

```
1, 2
The transition matrix (by rows) is defined as follows:
1 2
1 0.6 0.4
2 0.5 0.5
```

Markovchain 321

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

```
1, 2, 3
The transition matrix (by rows) is defined as follows:
1 2 3
1 0.0000000 0.0000000 1.0000000
2 0.0000000 0.0000000 1.0000000
3 0.3333333 0.3333333 0.3333333
```

Markovchain 322

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

	1	3
1	0.5	0.5
3	1.0	0.0

Markovchain 323

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.0000000	0.6000000	0.4000000
2	0.3333333	0.3333333	0.3333333
3	0.3333333	0.3333333	0.3333333

Markovchain 324

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

2, 3

The transition matrix (by rows) is defined as follows:

	2	3
2	0	1
3	0	1

Markovchain 325

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

3

The transition matrix (by rows) is defined as follows:

	3
3	1

Markovchain 326

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

3

The transition matrix (by rows) is defined as follows:

	3
3	1

Markovchain 327

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

```

3
The transition matrix (by rows) is defined as follows:
3
3 1

Markovchain 328
Unnamed Markov chain
A 2 - dimensional discrete Markov Chain defined by the following states:
1, 3
The transition matrix (by rows) is defined as follows:
1 3
1 0.5 0.5
3 1.0 0.0

Markovchain 329
Unnamed Markov chain
A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
1
1 1

Markovchain 330
Unnamed Markov chain
A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
1
1 1

Markovchain 331
Unnamed Markov chain
A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
1
1 1

Markovchain 332
Unnamed Markov chain
A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
1
1 1

Markovchain 333

```

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1  
1 1

Markovchain 334

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2  
1 0.2 0.8  
2 0.5 0.5

Markovchain 335

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2  
1 0 1  
2 1 0

Markovchain 336

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.0000000	0.2500000	0.7500000
2	0.0000000	1.0000000	0.0000000
3	0.3333333	0.3333333	0.3333333

Markovchain 337

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.3333333	0.3333333	0.3333333
2	0.5000000	0.5000000	0.0000000
3	0.0000000	0.6666667	0.3333333

Markovchain 338

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:  
1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.0000000	1.0000000	0
2	0.6666667	0.3333333	0
3	1.0000000	0.0000000	0

Markovchain 339

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 2

The transition matrix (by rows) is defined as follows:

	1	2
1	1	0
2	1	0

Markovchain 340

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:  
1

The transition matrix (by rows) is defined as follows:

	1
1	1

Markovchain 341

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 3

The transition matrix (by rows) is defined as follows:

	1	3
1	0.0	1.0
3	0.5	0.5

Markovchain 342

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 3

The transition matrix (by rows) is defined as follows:

	1	3
1	0.5	0.5
3	1.0	0.0

Markovchain 343

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:  
1

The transition matrix (by rows) is defined as follows:

```
1
1 1
```

Markovchain 344

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

```
1
The transition matrix (by rows) is defined as follows:
1
1 1
```

Markovchain 345

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

```
1
The transition matrix (by rows) is defined as follows:
1
1 1
```

Markovchain 346

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

```
1
The transition matrix (by rows) is defined as follows:
1
1 1
```

Markovchain 347

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

```
1, 2, 3
The transition matrix (by rows) is defined as follows:
      1      2      3
1 0.0000000 0.4000000 0.6000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333
```

Markovchain 348

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

```
2, 3
The transition matrix (by rows) is defined as follows:
  2 3
2 0 1
3 0 1
```

Markovchain 349

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

1 3

1 0.5 0.5

3 1.0 0.0

Markovchain 350

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 351

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 352

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 0.4 0.6

2 0.5 0.5

Markovchain 353

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 0 1

2 0 1

Markovchain 354

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```

      1  2
1 0.5 0.5
2 0.4 0.6

```

Markovchain 355

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:  
1, 2, 3

The transition matrix (by rows) is defined as follows:

```

      1      2      3
1 0.0000000 1.0000000 0.0000000
2 0.0000000 0.0000000 1.0000000
3 0.3333333 0.3333333 0.3333333

```

Markovchain 356

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
2, 3

The transition matrix (by rows) is defined as follows:

```

      2      3
2 1.0000000 0.0000000
3 0.6666667 0.3333333

```

Markovchain 357

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:  
1, 2, 3

The transition matrix (by rows) is defined as follows:

```

      1      2      3
1 0.3333333 0.3333333 0.3333333
2 0.2500000 0.7500000 0.0000000
3 1.0000000 0.0000000 0.0000000

```

Markovchain 358

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 2

The transition matrix (by rows) is defined as follows:

```

      1  2
1 1 0
2 1 0

```

Markovchain 359

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 3

The transition matrix (by rows) is defined as follows:

```

      1   3
1 0.0 1.0
3 0.5 0.5

```

Markovchain 360

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

3

The transition matrix (by rows) is defined as follows:

```

      3
3 1

```

Markovchain 361

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

2, 3

The transition matrix (by rows) is defined as follows:

```

      2   3
2 0.5 0.5
3 0.2 0.8

```

Markovchain 362

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

```

      1       2       3
1 0.3333333 0.3333333 0.3333333
2 1.0000000 0.0000000 0.0000000
3 0.2500000 0.7500000 0.0000000

```

Markovchain 363

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```

      1       2
1 1.0000000 0.0000000
2 0.6666667 0.3333333

```

Markovchain 364

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```

1 2

```

```
1 1 0
```

```
2 1 0
```

```
Markovchain 365
```

```
Unnamed Markov chain
```

```
A 1 - dimensional discrete Markov Chain defined by the following states:
```

```
1
```

```
The transition matrix (by rows) is defined as follows:
```

```
1
```

```
1 1
```

```
Markovchain 366
```

```
Unnamed Markov chain
```

```
A 2 - dimensional discrete Markov Chain defined by the following states:
```

```
1, 3
```

```
The transition matrix (by rows) is defined as follows:
```

```
1 3
```

```
1 0.0 1.0
```

```
3 0.5 0.5
```

```
Markovchain 367
```

```
Unnamed Markov chain
```

```
A 2 - dimensional discrete Markov Chain defined by the following states:
```

```
2, 3
```

```
The transition matrix (by rows) is defined as follows:
```

```
2 3
```

```
2 0.5 0.5
```

```
3 1.0 0.0
```

```
Markovchain 368
```

```
Unnamed Markov chain
```

```
A 2 - dimensional discrete Markov Chain defined by the following states:
```

```
1, 2
```

```
The transition matrix (by rows) is defined as follows:
```

```
1 2
```

```
1 0.5 0.5
```

```
2 1.0 0.0
```

```
Markovchain 369
```

```
Unnamed Markov chain
```

```
A 1 - dimensional discrete Markov Chain defined by the following states:
```

```
1
```

```
The transition matrix (by rows) is defined as follows:
```

```
1
```

```
1 1
```

```
Markovchain 370
```

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 371

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 372

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

1 2 3

1 0.4000000 0.4000000 0.2000000

2 0.3333333 0.3333333 0.3333333

3 0.3333333 0.3333333 0.3333333

Markovchain 373

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

1 2 3

1 0.5 0.5 0

2 1.0 0.0 0

3 1.0 0.0 0

Markovchain 374

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 0.25 0.75

2 0.00 1.00

Markovchain 375

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

```

1, 2
The transition matrix (by rows) is defined as follows:
  1  2
1 0.00 1.00
2 0.75 0.25

Markovchain 376
Unnamed Markov chain
A 3 - dimensional discrete Markov Chain defined by the following states:
1, 2, 3
The transition matrix (by rows) is defined as follows:
  1  2  3
1 0.0000000 0.3333333 0.6666667
2 0.5000000 0.5000000 0.0000000
3 0.3333333 0.3333333 0.3333333

Markovchain 377
Unnamed Markov chain
A 3 - dimensional discrete Markov Chain defined by the following states:
1, 2, 3
The transition matrix (by rows) is defined as follows:
  1 2 3
1 1 0 0
2 1 0 0
3 1 0 0

Markovchain 378
Unnamed Markov chain
A 2 - dimensional discrete Markov Chain defined by the following states:
1, 3
The transition matrix (by rows) is defined as follows:
  1  3
1 0.0 1.0
3 0.5 0.5

Markovchain 379
Unnamed Markov chain
A 3 - dimensional discrete Markov Chain defined by the following states:
1, 2, 3
The transition matrix (by rows) is defined as follows:
  1  2  3
1 0.3333333 0.3333333 0.3333333
2 0.3333333 0.3333333 0.3333333
3 0.4000000 0.4000000 0.2000000

Markovchain 380
Unnamed Markov chain

```

A 3 - dimensional discrete Markov Chain defined by the following states:  
1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	1	0	0
2	1	0	0
3	1	0	0

Markovchain 381

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:  
1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.0000000	0.2000000	0.8000000
2	0.3333333	0.3333333	0.3333333
3	0.3333333	0.3333333	0.3333333

Markovchain 382

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:  
1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.3333333	0.3333333	0.3333333
2	1.0000000	0.0000000	0.0000000
3	1.0000000	0.0000000	0.0000000

Markovchain 383

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:  
1

The transition matrix (by rows) is defined as follows:

	1
1	1

Markovchain 384

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:  
1

The transition matrix (by rows) is defined as follows:

	1
1	1

Markovchain 385

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

```
1, 2
The transition matrix (by rows) is defined as follows:
  1  2
1 0.8 0.2
2 0.5 0.5

Markovchain 386
Unnamed Markov chain
A 2 - dimensional discrete Markov Chain defined by the following states:
1, 2
The transition matrix (by rows) is defined as follows:
  1  2
1 1 0
2 1 0

Markovchain 387
Unnamed Markov chain
A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
  1
1 1

Markovchain 388
Unnamed Markov chain
A 2 - dimensional discrete Markov Chain defined by the following states:
1, 2
The transition matrix (by rows) is defined as follows:
  1  2
1 0.8 0.2
2 0.5 0.5

Markovchain 389
Unnamed Markov chain
A 2 - dimensional discrete Markov Chain defined by the following states:
1, 2
The transition matrix (by rows) is defined as follows:
  1  2
1 1 0
2 1 0

Markovchain 390
Unnamed Markov chain
A 2 - dimensional discrete Markov Chain defined by the following states:
1, 3
The transition matrix (by rows) is defined as follows:
  1  3
```

```
1 0.0 1.0
3 0.5 0.5
```

Markovchain 391

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
2, 3

The transition matrix (by rows) is defined as follows:

```
      2      3
2 0.5 0.5
3 0.2 0.8
```

Markovchain 392

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:  
1, 2, 3

The transition matrix (by rows) is defined as follows:

```
      1      2      3
1 0.3333333 0.3333333 0.3333333
2 1.0000000 0.0000000 0.0000000
3 1.0000000 0.0000000 0.0000000
```

Markovchain 393

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:  
1

The transition matrix (by rows) is defined as follows:

```
      1
1 1
```

Markovchain 394

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:  
1

The transition matrix (by rows) is defined as follows:

```
      1
1 1
```

Markovchain 395

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:  
1

The transition matrix (by rows) is defined as follows:

```
      1
1 1
```

Markovchain 396

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 2

The transition matrix (by rows) is defined as follows:

	1	2
1	0.2	0.8
2	0.5	0.5

Markovchain 397

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 2

The transition matrix (by rows) is defined as follows:

	1	2
1	1	0
2	1	0

Markovchain 398

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:  
1

The transition matrix (by rows) is defined as follows:

	1
1	1

Markovchain 399

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 2

The transition matrix (by rows) is defined as follows:

	1	2
1	0.0	1.0
2	0.5	0.5

Markovchain 400

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:  
2

The transition matrix (by rows) is defined as follows:

	2
2	1

Markovchain 401

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 2

The transition matrix (by rows) is defined as follows:

```

      1  2
1 0.5 0.5
2 1.0 0.0

```

Markovchain 402

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

```

      1      2      3
1 0.0000000 0.8000000 0.2000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

```

Markovchain 403

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

```

      1      2      3
1 0.3333333 0.3333333 0.3333333
2 1.0000000 0.0000000 0.0000000
3 1.0000000 0.0000000 0.0000000

```

Markovchain 404

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```

      1  2
1 0.8 0.2
2 0.5 0.5

```

Markovchain 405

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

```

      1      2      3
1 0.0000000 0.0000000 1.0000000
2 0.0000000 0.0000000 1.0000000
3 0.3333333 0.3333333 0.3333333

```

Markovchain 406

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

```

      1   3
1 0.5 0.5
3 1.0 0.0

```

Markovchain 407

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```

      1   2
1 0.8 0.2
2 0.5 0.5

```

Markovchain 408

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```

      1   2
1 0.5 0.5
2 0.0 1.0

```

Markovchain 409

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

```

      1       2       3
1 0.0000000 0.5000000 0.5000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

```

Markovchain 410

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

```

      1   2   3
1 1 0.0 0.0
2 0 1.0 0.0
3 0 0.5 0.5

```

Markovchain 411

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

```

  1 2 3
1 1 0 0
2 1 0 0
3 1 0 0

```

Markovchain 412

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```

  1
1 1

```

Markovchain 413

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```

  1
1 1

```

Markovchain 414

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

```

          1          2          3
1 0.2000000 0.6000000 0.2000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

```

Markovchain 415

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

```

  1 2 3
1 0 1 0
2 0 1 0
3 0 0 1

```

Markovchain 416

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

2, 3

The transition matrix (by rows) is defined as follows:

```

  2 3
2 1 0
3 1 0

```

Markovchain 417

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
2, 3

The transition matrix (by rows) is defined as follows:

```

  2 3
2 0.2 0.8
3 0.5 0.5

```

Markovchain 418

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:  
1, 2, 3

The transition matrix (by rows) is defined as follows:

```

      1      2      3
1 0.3333333 0.3333333 0.3333333
2 1.0000000 0.0000000 0.0000000
3 1.0000000 0.0000000 0.0000000

```

Markovchain 419

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 2

The transition matrix (by rows) is defined as follows:

```

  1 2
1 0.8 0.2
2 0.5 0.5

```

Markovchain 420

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 2

The transition matrix (by rows) is defined as follows:

```

  1 2
1 1 0
2 1 0

```

Markovchain 421

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:  
1

The transition matrix (by rows) is defined as follows:

```

1

```

1 1

Markovchain 422

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 0.8 0.2

2 0.5 0.5

Markovchain 423

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 0.75 0.25

2 0.00 1.00

Markovchain 424

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 0.0 1.0

2 0.5 0.5

Markovchain 425

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

1 2 3

1 0.0000000 0.0000000 1.0000000

2 0.0000000 0.5000000 0.5000000

3 0.3333333 0.3333333 0.3333333

Markovchain 426

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

1 2 3

1 0.3333333 0.3333333 0.3333333

2 1.0000000 0.0000000 0.0000000

```
3 1.0000000 0.0000000 0.0000000
```

```
Markovchain 427
```

```
Unnamed Markov chain
```

```
A 1 - dimensional discrete Markov Chain defined by the following states:
```

```
1
```

```
The transition matrix (by rows) is defined as follows:
```

```
1
```

```
1 1
```

```
Markovchain 428
```

```
Unnamed Markov chain
```

```
A 1 - dimensional discrete Markov Chain defined by the following states:
```

```
1
```

```
The transition matrix (by rows) is defined as follows:
```

```
1
```

```
1 1
```

```
Markovchain 429
```

```
Unnamed Markov chain
```

```
A 2 - dimensional discrete Markov Chain defined by the following states:
```

```
1, 2
```

```
The transition matrix (by rows) is defined as follows:
```

```
1 2
```

```
1 0.6 0.4
```

```
2 0.5 0.5
```

```
Markovchain 430
```

```
Unnamed Markov chain
```

```
A 2 - dimensional discrete Markov Chain defined by the following states:
```

```
1, 2
```

```
The transition matrix (by rows) is defined as follows:
```

```
1 2
```

```
1 1 0
```

```
2 1 0
```

```
Markovchain 431
```

```
Unnamed Markov chain
```

```
A 1 - dimensional discrete Markov Chain defined by the following states:
```

```
1
```

```
The transition matrix (by rows) is defined as follows:
```

```
1
```

```
1 1
```

```
Markovchain 432
```

```
Unnamed Markov chain
```

```
A 1 - dimensional discrete Markov Chain defined by the following states:
```

```

1
The transition matrix (by rows) is defined as follows:
1
1 1

Markovchain 433
Unnamed Markov chain
A 3 - dimensional discrete Markov Chain defined by the following states:
1, 2, 3
The transition matrix (by rows) is defined as follows:
      1      2      3
1 0.0000000 0.8000000 0.2000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

Markovchain 434
Unnamed Markov chain
A 3 - dimensional discrete Markov Chain defined by the following states:
1, 2, 3
The transition matrix (by rows) is defined as follows:
      1      2      3
1 0.3333333 0.3333333 0.3333333
2 1.0000000 0.0000000 0.0000000
3 1.0000000 0.0000000 0.0000000

Markovchain 435
Unnamed Markov chain
A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
1
1 1

Markovchain 436
Unnamed Markov chain
A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
1
1 1

Markovchain 437
Unnamed Markov chain
A 2 - dimensional discrete Markov Chain defined by the following states:
1, 2
The transition matrix (by rows) is defined as follows:
1 2

```

```
1 0.6 0.4
2 0.5 0.5
```

Markovchain 438

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 1 0

2 1 0

Markovchain 439

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 440

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 441

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 442

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 443

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

```

1
The transition matrix (by rows) is defined as follows:
1
1 1

Markovchain 444
Unnamed Markov chain
A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
1
1 1

Markovchain 445
Unnamed Markov chain
A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
1
1 1

Markovchain 446
Unnamed Markov chain
A 2 - dimensional discrete Markov Chain defined by the following states:
1, 2
The transition matrix (by rows) is defined as follows:
1 2
1 0.4 0.6
2 0.5 0.5

Markovchain 447
Unnamed Markov chain
A 2 - dimensional discrete Markov Chain defined by the following states:
1, 2
The transition matrix (by rows) is defined as follows:
1 2
1 1 0
2 1 0

Markovchain 448
Unnamed Markov chain
A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
1
1 1

```

Markovchain 449

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 450

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 451

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 0.2 0.8

2 0.5 0.5

Markovchain 452

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 1 0

2 1 0

Markovchain 453

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 454

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1  
1 1

Markovchain 455

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2  
1 0.2 0.8  
2 0.5 0.5

Markovchain 456

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2  
1 1 0  
2 1 0

Markovchain 457

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2  
1 0.4 0.6  
2 0.5 0.5

Markovchain 458

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

1 2 3  
1 0.0000000 0.5000000 0.5000000  
2 0.0000000 0.0000000 1.0000000  
3 0.3333333 0.3333333 0.3333333

Markovchain 459

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

1 2 3  
1 0.3333333 0.3333333 0.3333333

```
2 1.0000000 0.0000000 0.0000000
3 1.0000000 0.0000000 0.0000000
```

Markovchain 460

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```
1
1 1
```

Markovchain 461

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```
1
1 1
```

Markovchain 462

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```
1
1 1
```

Markovchain 463

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```
1 2
1 0.8 0.2
2 0.5 0.5
```

Markovchain 464

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```
1 2
1 1 0
2 1 0
```

Markovchain 465

Unnamed Markov chain

```

A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
1
1 1

```

Markovchain 466

Unnamed Markov chain

```

A 2 - dimensional discrete Markov Chain defined by the following states:
1, 2
The transition matrix (by rows) is defined as follows:
1 2
1 0.6 0.4
2 0.5 0.5

```

Markovchain 467

Unnamed Markov chain

```

A 2 - dimensional discrete Markov Chain defined by the following states:
1, 2
The transition matrix (by rows) is defined as follows:
1 2
1 0.6666667 0.3333333
2 1.0000000 0.0000000

```

Markovchain 468

Unnamed Markov chain

```

A 2 - dimensional discrete Markov Chain defined by the following states:
1, 2
The transition matrix (by rows) is defined as follows:
1 2
1 1 0
2 0 1

```

Markovchain 469

Unnamed Markov chain

```

A 2 - dimensional discrete Markov Chain defined by the following states:
1, 2
The transition matrix (by rows) is defined as follows:
1 2
1 1 0
2 1 0

```

Markovchain 470

Unnamed Markov chain

```

A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:

```

```

1
1 1

```

Markovchain 471

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```

1
1 1

```

Markovchain 472

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```

1
1 1

```

Markovchain 473

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```

1 2
1 0.8 0.2
2 0.5 0.5

```

Markovchain 474

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

```

      1      2      3
1 0.250000 0.500000 0.250000
2 0.000000 1.000000 0.000000
3 0.333333 0.333333 0.333333

```

Markovchain 475

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

```

1 2 3
1 1 0 0
2 1 0 0
3 1 0 0

```

Markovchain 476

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 477

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 478

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

1 3

1 0.0 1.0

3 0.5 0.5

Markovchain 479

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

1 3

1 0.5 0.5

3 1.0 0.0

Markovchain 480

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 481

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```
1
1 1
```

Markovchain 482

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

```
1
The transition matrix (by rows) is defined as follows:
1
1 1
```

Markovchain 483

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

```
1
The transition matrix (by rows) is defined as follows:
1
1 1
```

Markovchain 484

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

```
1
The transition matrix (by rows) is defined as follows:
1
1 1
```

Markovchain 485

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

```
1, 2
The transition matrix (by rows) is defined as follows:
1 2
1 0.2 0.8
2 0.5 0.5
```

Markovchain 486

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

```
1, 2
The transition matrix (by rows) is defined as follows:
1 2
1 0.00 1.00
2 0.25 0.75
```

Markovchain 487

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.0000000	1.0000000	0.0000000
2	0.0000000	0.5000000	0.5000000
3	0.3333333	0.3333333	0.3333333

Markovchain 488

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.3333333	0.3333333	0.3333333
2	1.0000000	0.0000000	0.0000000
3	1.0000000	0.0000000	0.0000000

Markovchain 489

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

	1
1	1

Markovchain 490

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

	1	2
1	0.4	0.6
2	0.5	0.5

Markovchain 491

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

	1	2
1	1	0
2	1	0

Markovchain 492

Unnamed Markov chain

```

A 2 - dimensional discrete Markov Chain defined by the following states:
1, 2
The transition matrix (by rows) is defined as follows:
  1  2
1 0.8 0.2
2 0.5 0.5

```

```
Markovchain 493
```

```
Unnamed Markov chain
```

```

A 2 - dimensional discrete Markov Chain defined by the following states:
1, 2
The transition matrix (by rows) is defined as follows:
  1  2
1 1 0
2 1 0

```

```
Markovchain 494
```

```
Unnamed Markov chain
```

```

A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
  1
1 1

```

```
Markovchain 495
```

```
Unnamed Markov chain
```

```

A 3 - dimensional discrete Markov Chain defined by the following states:
1, 2, 3
The transition matrix (by rows) is defined as follows:
  1      2      3
1 0.6000000 0.2000000 0.2000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

```

```
Markovchain 496
```

```
Unnamed Markov chain
```

```

A 3 - dimensional discrete Markov Chain defined by the following states:
1, 2, 3
The transition matrix (by rows) is defined as follows:
  1      2      3
1 0 0.6666667 0.3333333
2 0 0.0000000 1.0000000
3 0 0.0000000 1.0000000

```

```
Markovchain 497
```

```
Unnamed Markov chain
```

```

A 3 - dimensional discrete Markov Chain defined by the following states:

```

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.3333333	0.3333333	0.3333333
2	1.0000000	0.0000000	0.0000000
3	1.0000000	0.0000000	0.0000000

Markovchain 498

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

	1	2
1	0.4	0.6
2	0.5	0.5

Markovchain 499

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.0000000	0.5000000	0.5000000
2	0.0000000	0.0000000	1.0000000
3	0.3333333	0.3333333	0.3333333

Markovchain 500

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.3333333	0.3333333	0.3333333
2	1.0000000	0.0000000	0.0000000
3	1.0000000	0.0000000	0.0000000

Markovchain 501

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

	1
1	1

Markovchain 502

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

```

1
The transition matrix (by rows) is defined as follows:
1
1 1

Markovchain 503
Unnamed Markov chain
A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
1
1 1

Markovchain 504
Unnamed Markov chain
A 2 - dimensional discrete Markov Chain defined by the following states:
1, 2
The transition matrix (by rows) is defined as follows:
1 2
1 0.8 0.2
2 0.5 0.5

Markovchain 505
Unnamed Markov chain
A 2 - dimensional discrete Markov Chain defined by the following states:
1, 2
The transition matrix (by rows) is defined as follows:
1 2
1 1 0
2 1 0

Markovchain 506
Unnamed Markov chain
A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
1
1 1

Markovchain 507
Unnamed Markov chain
A 3 - dimensional discrete Markov Chain defined by the following states:
1, 2, 3
The transition matrix (by rows) is defined as follows:
1 2 3
1 0.6000000 0.2000000 0.2000000
2 0.3333333 0.3333333 0.3333333

```

3 0.3333333 0.3333333 0.3333333

Markovchain 508

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

1 2 3

1 1 0 0

2 1 0 0

3 1 0 0

Markovchain 509

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 510

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 511

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 512

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 0.8 0.2

2 0.5 0.5

Markovchain 513

Unnamed Markov chain

```
A 2 - dimensional discrete Markov Chain defined by the following states:
1, 2
The transition matrix (by rows) is defined as follows:
  1 2
1 1 0
2 1 0
```

Markovchain 514

Unnamed Markov chain

```
A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
  1
1 1
```

Markovchain 515

Unnamed Markov chain

```
A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
  1
1 1
```

Markovchain 516

Unnamed Markov chain

```
A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
  1
1 1
```

Markovchain 517

Unnamed Markov chain

```
A 2 - dimensional discrete Markov Chain defined by the following states:
1, 3
The transition matrix (by rows) is defined as follows:
  1 3
1 0.8 0.2
3 0.5 0.5
```

Markovchain 518

Unnamed Markov chain

```
A 2 - dimensional discrete Markov Chain defined by the following states:
1, 3
The transition matrix (by rows) is defined as follows:
  1 3
1 0 1
```

3 0 1

Markovchain 519

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

3

The transition matrix (by rows) is defined as follows:

3

3 1

Markovchain 520

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

1 3

1 0.5 0.5

3 1.0 0.0

Markovchain 521

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 522

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 0.6 0.4

2 0.5 0.5

Markovchain 523

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 1 0

2 1 0

Markovchain 524

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:  
1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.0000000	0.2000000	0.8000000
2	0.3333333	0.3333333	0.3333333
3	0.3333333	0.3333333	0.3333333

Markovchain 525

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:  
1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.3333333	0.3333333	0.3333333
2	1.0000000	0.0000000	0.0000000
3	0.0000000	0.5000000	0.5000000

Markovchain 526

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:  
1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	1.0	0.0	0
2	1.0	0.0	0
3	0.5	0.5	0

Markovchain 527

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 2

The transition matrix (by rows) is defined as follows:

	1	2
1	0.75	0.25
2	1.00	0.00

Markovchain 528

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 2

The transition matrix (by rows) is defined as follows:

	1	2
1	0	1
2	0	1

Markovchain 529

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

	1	2
1	0.5	0.5
2	1.0	0.0

Markovchain 530

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

	1
1	1

Markovchain 531

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

	1	3
1	0.0	1.0
3	0.5	0.5

Markovchain 532

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

	1	3
1	0.5	0.5
3	1.0	0.0

Markovchain 533

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

	1
1	1

Markovchain 534

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```

      1  2
1 0.6 0.4
2 0.5 0.5

```

Markovchain 535

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

```

      1      2      3
1 0.0000000 0.0000000 1.0000000
2 0.0000000 0.0000000 1.0000000
3 0.3333333 0.3333333 0.3333333

```

Markovchain 536

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

```

      1      2      3
1 0.3333333 0.3333333 0.3333333
2 0.3333333 0.3333333 0.3333333
3 0.8000000 0.2000000 0.0000000

```

Markovchain 537

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

```

      1      2      3
1 0.0000000 0.0000000 1.0000000
2 0.0000000 0.0000000 1.0000000
3 0.3333333 0.3333333 0.3333333

```

Markovchain 538

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

```

      1  3
1 0.5 0.5
3 1.0 0.0

```

Markovchain 539

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```

    1  2
1 0.6 0.4
2 0.5 0.5

```

Markovchain 540

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```

    1  2
1 1 0
2 1 0

```

Markovchain 541

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```

    1
1 1

```

Markovchain 542

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```

    1
1 1

```

Markovchain 543

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

```

    1  3
1 0.0 1.0
3 0.5 0.5

```

Markovchain 544

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

```

    1  3
1 0.5 0.5
3 1.0 0.0

```

Markovchain 545

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 546

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 547

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 548

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

1 2 3

1 0.0000000 0.4000000 0.6000000

2 0.3333333 0.3333333 0.3333333

3 0.3333333 0.3333333 0.3333333

Markovchain 549

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

1 2 3

1 0.3333333 0.3333333 0.3333333

2 1.0000000 0.0000000 0.0000000

3 1.0000000 0.0000000 0.0000000

Markovchain 550

Unnamed Markov chain

```

A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
1
1 1

```

Markovchain 551

Unnamed Markov chain

```

A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
1
1 1

```

Markovchain 552

Unnamed Markov chain

```

A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
1
1 1

```

Markovchain 553

Unnamed Markov chain

```

A 3 - dimensional discrete Markov Chain defined by the following states:
1, 2, 3
The transition matrix (by rows) is defined as follows:
      1      2      3
1 0.4000000 0.4000000 0.2000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

```

Markovchain 554

Unnamed Markov chain

```

A 3 - dimensional discrete Markov Chain defined by the following states:
1, 2, 3
The transition matrix (by rows) is defined as follows:
  1 2 3
1 1 0 0
2 1 0 0
3 1 0 0

```

Markovchain 555

Unnamed Markov chain

```

A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:

```

```
1
1 1
```

Markovchain 556

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

```
1 3
1 0.0 1.0
3 0.5 0.5
```

Markovchain 557

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

```
1 3
1 0.5 0.5
3 1.0 0.0
```

Markovchain 558

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```
1 2
1 0.8 0.2
2 0.5 0.5
```

Markovchain 559

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```
1 2
1 1 0
2 1 0
```

Markovchain 560

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```
1
1 1
```

Markovchain 561

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 562

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 563

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 0.6 0.4

2 0.5 0.5

Markovchain 564

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 1 0

2 1 0

Markovchain 565

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 566

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```
1
1 1
```

Markovchain 567

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```
1 2
1 0.8 0.2
2 0.5 0.5
```

Markovchain 568

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```
1 2
1 0.5 0.5
2 0.0 1.0
```

Markovchain 569

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

```
1 2 3
1 0.0000000 0.0000000 1.0000000
2 0.0000000 0.0000000 1.0000000
3 0.3333333 0.3333333 0.3333333
```

Markovchain 570

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

```
1 3
1 0.5 0.5
3 1.0 0.0
```

Markovchain 571

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```
1
1 1
```

Markovchain 572

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 573

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

1 3

1 0.0 1.0

3 0.5 0.5

Markovchain 574

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

1 3

1 0.5 0.5

3 1.0 0.0

Markovchain 575

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 0.2 0.8

2 0.5 0.5

Markovchain 576

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 1 0

2 1 0

Markovchain 577

Unnamed Markov chain

```

A 2 - dimensional discrete Markov Chain defined by the following states:
1, 2
The transition matrix (by rows) is defined as follows:
  1  2
1 0.0 1.0
2 0.5 0.5

```

```
Markovchain 578
```

```
Unnamed Markov chain
```

```

A 2 - dimensional discrete Markov Chain defined by the following states:
1, 2
The transition matrix (by rows) is defined as follows:
  1  2
1 0.5 0.5
2 1.0 0.0

```

```
Markovchain 579
```

```
Unnamed Markov chain
```

```

A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
  1
1 1

```

```
Markovchain 580
```

```
Unnamed Markov chain
```

```

A 2 - dimensional discrete Markov Chain defined by the following states:
1, 2
The transition matrix (by rows) is defined as follows:
  1  2
1 0.2 0.8
2 0.5 0.5

```

```
Markovchain 581
```

```
Unnamed Markov chain
```

```

A 3 - dimensional discrete Markov Chain defined by the following states:
1, 2, 3
The transition matrix (by rows) is defined as follows:
  1      2      3
1 0.0000000 0.0000000 1.0000000
2 0.0000000 0.0000000 1.0000000
3 0.3333333 0.3333333 0.3333333

```

```
Markovchain 582
```

```
Unnamed Markov chain
```

```

A 2 - dimensional discrete Markov Chain defined by the following states:
1, 3

```

The transition matrix (by rows) is defined as follows:

```

    1  3
1 0.5 0.5
3 1.0 0.0

```

Markovchain 583

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```

    1
1 1

```

Markovchain 584

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```

    1
1 1

```

Markovchain 585

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```

    1
1 1

```

Markovchain 586

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```

    1  2
1 0.8 0.2
2 0.5 0.5

```

Markovchain 587

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```

    1  2
1 1 0
2 1 0

```

Markovchain 588

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.2000000	0.6000000	0.2000000
2	0.3333333	0.3333333	0.3333333
3	0.3333333	0.3333333	0.3333333

Markovchain 589

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	1	0	0
2	1	0	0
3	1	0	0

Markovchain 590

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.0000000	0.2000000	0.8000000
2	0.3333333	0.3333333	0.3333333
3	0.3333333	0.3333333	0.3333333

Markovchain 591

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.3333333	0.3333333	0.3333333
2	0.0000000	0.0000000	1.0000000
3	0.5000000	0.2500000	0.2500000

Markovchain 592

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	1	0	0

2 1 0 0  
3 1 0 0

Markovchain 593

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 594

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 595

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 596

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 597

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 598

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```
1
1 1
```

Markovchain 599

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

```
1
The transition matrix (by rows) is defined as follows:
```

```
1
1 1
```

Markovchain 600

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

```
1
The transition matrix (by rows) is defined as follows:
```

```
1
1 1
```

Markovchain 601

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

```
1
The transition matrix (by rows) is defined as follows:
```

```
1
1 1
```

Markovchain 602

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

```
1
The transition matrix (by rows) is defined as follows:
```

```
1
1 1
```

Markovchain 603

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

```
1
The transition matrix (by rows) is defined as follows:
```

```
1
1 1
```

Markovchain 604

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

```

1
The transition matrix (by rows) is defined as follows:
1
1 1

Markovchain 605
Unnamed Markov chain
A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
1
1 1

Markovchain 606
Unnamed Markov chain
A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
1
1 1

Markovchain 607
Unnamed Markov chain
A 2 - dimensional discrete Markov Chain defined by the following states:
1, 3
The transition matrix (by rows) is defined as follows:
1 3
1 0.0 1.0
3 0.5 0.5

Markovchain 608
Unnamed Markov chain
A 2 - dimensional discrete Markov Chain defined by the following states:
1, 3
The transition matrix (by rows) is defined as follows:
1 3
1 0.5 0.5
3 1.0 0.0

Markovchain 609
Unnamed Markov chain
A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
1
1 1

```

Markovchain 610

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 611

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

1 3

1 0.0 1.0

3 0.5 0.5

Markovchain 612

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

1 3

1 0.5 0.5

3 1.0 0.0

Markovchain 613

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 614

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 615

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.0000000	0.4000000	0.6000000
2	0.3333333	0.3333333	0.3333333
3	0.3333333	0.3333333	0.3333333

Markovchain 616

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
2, 3

The transition matrix (by rows) is defined as follows:

	2	3
2	0.5	0.5
3	1.0	0.0

Markovchain 617

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:  
1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.3333333	0.3333333	0.3333333
2	0.2500000	0.5000000	0.2500000
3	0.0000000	1.0000000	0.0000000

Markovchain 618

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:  
1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	1	0	0
2	1	0	0
3	1	0	0

Markovchain 619

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:  
1

The transition matrix (by rows) is defined as follows:

	1
1	1

Markovchain 620

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:  
1

The transition matrix (by rows) is defined as follows:

```
1
1 1
```

Markovchain 621

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```
1 2
1 0.2 0.8
2 0.5 0.5
```

Markovchain 622

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```
1 2
1 1.00 0.00
2 0.75 0.25
```

Markovchain 623

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```
1 2
1 1 0
2 1 0
```

Markovchain 624

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```
1 2
1 0.2 0.8
2 0.5 0.5
```

Markovchain 625

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```
1 2
1 1 0
2 1 0
```

Markovchain 626

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.0000000	0.6000000	0.4000000
2	0.3333333	0.3333333	0.3333333
3	0.3333333	0.3333333	0.3333333

Markovchain 627

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.3333333	0.3333333	0.3333333
2	1.0000000	0.0000000	0.0000000
3	1.0000000	0.0000000	0.0000000

Markovchain 628

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

	1
1	1

Markovchain 629

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

	1
1	1

Markovchain 630

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

	1
1	1

Markovchain 631

Unnamed Markov chain

```

A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
1
1 1

```

```
Markovchain 632
```

```
Unnamed Markov chain
```

```

A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
1
1 1

```

```
Markovchain 633
```

```
Unnamed Markov chain
```

```

A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
1
1 1

```

```
Markovchain 634
```

```
Unnamed Markov chain
```

```

A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
1
1 1

```

```
Markovchain 635
```

```
Unnamed Markov chain
```

```

A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
1
1 1

```

```
Markovchain 636
```

```
Unnamed Markov chain
```

```

A 3 - dimensional discrete Markov Chain defined by the following states:
1, 2, 3
The transition matrix (by rows) is defined as follows:
      1      2      3
1 0.4000000 0.4000000 0.2000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

```

Markovchain 637

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	1	0	0
2	1	0	0
3	1	0	0

Markovchain 638

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.0000000	0.2000000	0.8000000
2	0.3333333	0.3333333	0.3333333
3	0.3333333	0.3333333	0.3333333

Markovchain 639

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

2, 3

The transition matrix (by rows) is defined as follows:

	2	3
2	1	0
3	1	0

Markovchain 640

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

	1	2
1	0.5	0.5
2	1.0	0.0

Markovchain 641

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

	1
1	1

Markovchain 642

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 643

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 644

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

1 2 3

1 0.2000000 0.2000000 0.6000000

2 0.3333333 0.3333333 0.3333333

3 0.3333333 0.3333333 0.3333333

Markovchain 645

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

1 2 3

1 1 0 0

2 1 0 0

3 1 0 0

Markovchain 646

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

1 3

1 0.0 1.0

3 0.5 0.5

Markovchain 647

Unnamed Markov chain

```

A 2 - dimensional discrete Markov Chain defined by the following states:
1, 3
The transition matrix (by rows) is defined as follows:
      1      3
1 0.5 0.5
3 1.0 0.0

```

Markovchain 648

Unnamed Markov chain

```

A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
      1
1 1

```

Markovchain 649

Unnamed Markov chain

```

A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
      1
1 1

```

Markovchain 650

Unnamed Markov chain

```

A 3 - dimensional discrete Markov Chain defined by the following states:
1, 2, 3
The transition matrix (by rows) is defined as follows:
      1      2      3
1 0.0000000 0.8000000 0.2000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

```

Markovchain 651

Unnamed Markov chain

```

A 3 - dimensional discrete Markov Chain defined by the following states:
1, 2, 3
The transition matrix (by rows) is defined as follows:
      1      2      3
1 0.3333333 0.3333333 0.3333333
2 1.0000000 0.0000000 0.0000000
3 1.0000000 0.0000000 0.0000000

```

Markovchain 652

Unnamed Markov chain

```

A 1 - dimensional discrete Markov Chain defined by the following states:
1

```

The transition matrix (by rows) is defined as follows:

```
1
1 1
```

Markovchain 653

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```
1 2
1 0.0 1.0
2 0.5 0.5
```

Markovchain 654

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

2, 3

The transition matrix (by rows) is defined as follows:

```
2 3
2 0.2 0.8
3 0.5 0.5
```

Markovchain 655

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

```
1 2 3
1 0.3333333 0.3333333 0.3333333
2 1.0000000 0.0000000 0.0000000
3 1.0000000 0.0000000 0.0000000
```

Markovchain 656

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```
1 2
1 0.4 0.6
2 0.5 0.5
```

Markovchain 657

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```
1 2
```

```

1 1 0
2 1 0

```

Markovchain 658

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```

1
1 1

```

Markovchain 659

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```

1
1 1

```

Markovchain 660

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```

1 2
1 0.4 0.6
2 0.5 0.5

```

Markovchain 661

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```

1 2
1 1.0000000 0.0000000
2 0.6666667 0.3333333

```

Markovchain 662

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```

1 2
1 1 0
2 1 0

```

Markovchain 663

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

	1	2
1	0.0	1.0
2	0.5	0.5

Markovchain 664

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

	1	2
1	0.5	0.5
2	1.0	0.0

Markovchain 665

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

	1
1	1

Markovchain 666

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.0000000	0.6000000	0.4000000
2	0.3333333	0.3333333	0.3333333
3	0.3333333	0.3333333	0.3333333

Markovchain 667

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.3333333	0.3333333	0.3333333
2	1.0000000	0.0000000	0.0000000
3	1.0000000	0.0000000	0.0000000

Markovchain 668

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 3

The transition matrix (by rows) is defined as follows:

```

1 3
1 0.0 1.0
3 0.5 0.5
```

Markovchain 669

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:  
3

The transition matrix (by rows) is defined as follows:

```

3
3 1
```

Markovchain 670

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 3

The transition matrix (by rows) is defined as follows:

```

1 3
1 0.5 0.5
3 1.0 0.0
```

Markovchain 671

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 3

The transition matrix (by rows) is defined as follows:

```

1 3
1 0.0 1.0
3 0.5 0.5
```

Markovchain 672

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 3

The transition matrix (by rows) is defined as follows:

```

1 3
1 0.5 0.5
3 1.0 0.0
```

Markovchain 673

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:  
1

The transition matrix (by rows) is defined as follows:

```

1
1 1

```

Markovchain 674

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```

1
1 1

```

Markovchain 675

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```

1
1 1

```

Markovchain 676

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```

1
1 1

```

Markovchain 677

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```

1
1 1

```

Markovchain 678

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

```

      1      2      3
1 0.0000000 0.6000000 0.4000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

```

Markovchain 679

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:  
1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.3333333	0.3333333	0.3333333
2	1.0000000	0.0000000	0.0000000
3	1.0000000	0.0000000	0.0000000

Markovchain 680

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 2

The transition matrix (by rows) is defined as follows:

	1	2
1	0.6	0.4
2	0.5	0.5

Markovchain 681

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 2

The transition matrix (by rows) is defined as follows:

	1	2
1	0.0	1.0
2	0.5	0.5

Markovchain 682

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 2

The transition matrix (by rows) is defined as follows:

	1	2
1	1	0
2	1	0

Markovchain 683

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:  
1

The transition matrix (by rows) is defined as follows:

	1
1	1

Markovchain 684

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 2

The transition matrix (by rows) is defined as follows:

```
  1  2
1 0.4 0.6
2 0.5 0.5
```

Markovchain 685

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```
  1  2
1 1 0
2 1 0
```

Markovchain 686

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```
  1
1 1
```

Markovchain 687

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```
  1
1 1
```

Markovchain 688

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```
  1
1 1
```

Markovchain 689

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```
  1
1 1
```

Markovchain 690

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 0.6 0.4

2 0.5 0.5

Markovchain 691

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 1 0

2 1 0

Markovchain 692

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 693

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 0.8 0.2

2 0.5 0.5

Markovchain 694

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

1 2 3

1 0.2500000 0.5000000 0.2500000

2 0.0000000 1.0000000 0.0000000

3 0.3333333 0.3333333 0.3333333

Markovchain 695

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

```

1, 2, 3
The transition matrix (by rows) is defined as follows:
  1 2 3
1 0 1 0
2 0 1 0
3 1 0 0

Markovchain 696
Unnamed Markov chain
A 2 - dimensional discrete Markov Chain defined by the following states:
1, 2
The transition matrix (by rows) is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain 697
Unnamed Markov chain
A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
  1
1 1

Markovchain 698
Unnamed Markov chain
A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
  1
1 1

Markovchain 699
Unnamed Markov chain
A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
  1
1 1

Markovchain 700
Unnamed Markov chain
A 2 - dimensional discrete Markov Chain defined by the following states:
1, 3
The transition matrix (by rows) is defined as follows:
  1 3
1 0.0 1.0

```

3 0.5 0.5

Markovchain 701

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

1 3

1 0.5 0.5

3 1.0 0.0

Markovchain 702

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 703

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 704

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 705

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 706

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```
1
1 1
```

Markovchain 707

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```
1 2
1 0.4 0.6
2 0.5 0.5
```

Markovchain 708

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```
1 2
1 1 0
2 1 0
```

Markovchain 709

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```
1
1 1
```

Markovchain 710

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```
1
1 1
```

Markovchain 711

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```
1
1 1
```

Markovchain 712

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1  
1 1

Markovchain 713

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1  
1 1

Markovchain 714

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.0000000	0.2000000	0.8000000
2	0.3333333	0.3333333	0.3333333
3	0.3333333	0.3333333	0.3333333

Markovchain 715

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.3333333	0.3333333	0.3333333
2	1.0000000	0.0000000	0.0000000
3	1.0000000	0.0000000	0.0000000

Markovchain 716

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1  
1 1

Markovchain 717

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```
1
1 1
```

Markovchain 718

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

```
1
The transition matrix (by rows) is defined as follows:
```

```
1
1 1
```

Markovchain 719

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

```
1
The transition matrix (by rows) is defined as follows:
```

```
1
1 1
```

Markovchain 720

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

```
1
The transition matrix (by rows) is defined as follows:
```

```
1
1 1
```

Markovchain 721

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

```
1
The transition matrix (by rows) is defined as follows:
```

```
1
1 1
```

Markovchain 722

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

```
1
The transition matrix (by rows) is defined as follows:
```

```
1
1 1
```

Markovchain 723

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

```

1
The transition matrix (by rows) is defined as follows:
1
1 1

Markovchain 724
Unnamed Markov chain
A 3 - dimensional discrete Markov Chain defined by the following states:
1, 2, 3
The transition matrix (by rows) is defined as follows:
      1      2      3
1 0.4000000 0.4000000 0.2000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

Markovchain 725
Unnamed Markov chain
A 3 - dimensional discrete Markov Chain defined by the following states:
1, 2, 3
The transition matrix (by rows) is defined as follows:
  1 2 3
1 1 0 0
2 1 0 0
3 1 0 0

Markovchain 726
Unnamed Markov chain
A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
1
1 1

Markovchain 727
Unnamed Markov chain
A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
1
1 1

Markovchain 728
Unnamed Markov chain
A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
1

```

```
1 1
```

```
Markovchain 729
```

```
Unnamed Markov chain
```

```
A 1 - dimensional discrete Markov Chain defined by the following states:
```

```
1
```

```
The transition matrix (by rows) is defined as follows:
```

```
1
```

```
1 1
```

```
Markovchain 730
```

```
Unnamed Markov chain
```

```
A 1 - dimensional discrete Markov Chain defined by the following states:
```

```
1
```

```
The transition matrix (by rows) is defined as follows:
```

```
1
```

```
1 1
```

```
Markovchain 731
```

```
Unnamed Markov chain
```

```
A 2 - dimensional discrete Markov Chain defined by the following states:
```

```
1, 2
```

```
The transition matrix (by rows) is defined as follows:
```

```
1 2
```

```
1 0.8 0.2
```

```
2 0.5 0.5
```

```
Markovchain 732
```

```
Unnamed Markov chain
```

```
A 3 - dimensional discrete Markov Chain defined by the following states:
```

```
1, 2, 3
```

```
The transition matrix (by rows) is defined as follows:
```

```
1 2 3
1 0.2500000 0.7500000 0.0000000
```

```
2 0.0000000 0.0000000 1.0000000
```

```
3 0.3333333 0.3333333 0.3333333
```

```
Markovchain 733
```

```
Unnamed Markov chain
```

```
A 3 - dimensional discrete Markov Chain defined by the following states:
```

```
1, 2, 3
```

```
The transition matrix (by rows) is defined as follows:
```

```
1 2 3
1 1 0 0
```

```
2 1 0 0
```

```
3 1 0 0
```

Markovchain 734

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 735

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

1 2 3

1 0.000000 0.600000 0.400000

2 0.333333 0.333333 0.333333

3 0.333333 0.333333 0.333333

Markovchain 736

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

1 2 3

1 0.333333 0.333333 0.333333

2 1.000000 0.000000 0.000000

3 1.000000 0.000000 0.000000

Markovchain 737

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 738

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 739

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

```

1, 2
The transition matrix (by rows) is defined as follows:
  1  2
1 0.6 0.4
2 0.5 0.5

Markovchain 740
Unnamed Markov chain
A 3 - dimensional discrete Markov Chain defined by the following states:
1, 2, 3
The transition matrix (by rows) is defined as follows:
  1      2      3
1 0.0000000 0.0000000 1.0000000
2 0.0000000 0.0000000 1.0000000
3 0.3333333 0.3333333 0.3333333

Markovchain 741
Unnamed Markov chain
A 2 - dimensional discrete Markov Chain defined by the following states:
1, 3
The transition matrix (by rows) is defined as follows:
  1  3
1 0.5 0.5
3 1.0 0.0

Markovchain 742
Unnamed Markov chain
A 2 - dimensional discrete Markov Chain defined by the following states:
1, 2
The transition matrix (by rows) is defined as follows:
  1  2
1 0.4 0.6
2 0.5 0.5

Markovchain 743
Unnamed Markov chain
A 3 - dimensional discrete Markov Chain defined by the following states:
1, 2, 3
The transition matrix (by rows) is defined as follows:
  1      2      3
1 0.0000000 0.0000000 1.0000000
2 0.0000000 0.0000000 1.0000000
3 0.3333333 0.3333333 0.3333333

Markovchain 744
Unnamed Markov chain
A 2 - dimensional discrete Markov Chain defined by the following states:

```

```

2, 3
The transition matrix (by rows) is defined as follows:
  2  3
2 0.5 0.5
3 0.2 0.8

Markovchain 745
Unnamed Markov chain
A 2 - dimensional discrete Markov Chain defined by the following states:
2, 3
The transition matrix (by rows) is defined as follows:
  2  3
2 1 0
3 1 0

Markovchain 746
Unnamed Markov chain
A 2 - dimensional discrete Markov Chain defined by the following states:
1, 2
The transition matrix (by rows) is defined as follows:
  1  2
1 0.5 0.5
2 1.0 0.0

Markovchain 747
Unnamed Markov chain
A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
  1
1 1

Markovchain 748
Unnamed Markov chain
A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
  1
1 1

Markovchain 749
Unnamed Markov chain
A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
  1
1 1

```

Markovchain 750

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 751

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 0.6 0.4

2 0.5 0.5

Markovchain 752

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 1 0

2 1 0

Markovchain 753

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 754

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 0.2 0.8

2 0.5 0.5

Markovchain 755

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

```

1, 2
The transition matrix (by rows) is defined as follows:
  1  2
1 0.0 1.0
2 0.5 0.5

Markovchain 756
Unnamed Markov chain
A 2 - dimensional discrete Markov Chain defined by the following states:
1, 2
The transition matrix (by rows) is defined as follows:
  1  2
1 1 0
2 1 0

Markovchain 757
Unnamed Markov chain
A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
  1
1 1

Markovchain 758
Unnamed Markov chain
A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
  1
1 1

Markovchain 759
Unnamed Markov chain
A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
  1
1 1

Markovchain 760
Unnamed Markov chain
A 2 - dimensional discrete Markov Chain defined by the following states:
1, 2
The transition matrix (by rows) is defined as follows:
  1  2
1 0.6 0.4
2 0.5 0.5

```

Markovchain 761

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

	1	2
1	0.6666667	0.3333333
2	0.5000000	0.5000000

Markovchain 762

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

	1	2
1	1	0
2	1	0

Markovchain 763

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

	1	2
1	0.4	0.6
2	0.5	0.5

Markovchain 764

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

	1	2
1	0.5000000	0.5000000
2	0.6666667	0.3333333

Markovchain 765

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

	1	2
1	1	0
2	1	0

Markovchain 766

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.0000000	0.4000000	0.6000000
2	0.3333333	0.3333333	0.3333333
3	0.3333333	0.3333333	0.3333333

Markovchain 767

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.3333333	0.3333333	0.3333333
2	1.0000000	0.0000000	0.0000000
3	1.0000000	0.0000000	0.0000000

Markovchain 768

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

	1	3
1	0.0	1.0
3	0.5	0.5

Markovchain 769

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

	1	3
1	0.5	0.5
3	1.0	0.0

Markovchain 770

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.0000000	0.2000000	0.8000000
2	0.3333333	0.3333333	0.3333333
3	0.3333333	0.3333333	0.3333333

Markovchain 771

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.3333333	0.3333333	0.3333333
2	0.0000000	1.0000000	0.0000000
3	0.7500000	0.2500000	0.0000000

Markovchain 772

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

	1	2
1	0.6666667	0.3333333
2	0.5000000	0.5000000

Markovchain 773

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

	1	2
1	1	0
2	1	0

Markovchain 774

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

	1
1	1

Markovchain 775

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

	1	2
1	0.4	0.6
2	0.5	0.5

Markovchain 776

Unnamed Markov chain

```

A 2 - dimensional discrete Markov Chain defined by the following states:
1, 2
The transition matrix (by rows) is defined as follows:
  1 2
1 1 0
2 1 0

```

Markovchain 777

Unnamed Markov chain

```

A 2 - dimensional discrete Markov Chain defined by the following states:
1, 2
The transition matrix (by rows) is defined as follows:
  1 2
1 0.2 0.8
2 0.5 0.5

```

Markovchain 778

Unnamed Markov chain

```

A 2 - dimensional discrete Markov Chain defined by the following states:
1, 2
The transition matrix (by rows) is defined as follows:
  1 2
1 0 1
2 0 1

```

Markovchain 779

Unnamed Markov chain

```

A 2 - dimensional discrete Markov Chain defined by the following states:
2, 3
The transition matrix (by rows) is defined as follows:
  2 3
2 0.6 0.4
3 0.5 0.5

```

Markovchain 780

Unnamed Markov chain

```

A 2 - dimensional discrete Markov Chain defined by the following states:
2, 3
The transition matrix (by rows) is defined as follows:
      2      3
2 0.6666667 0.3333333
3 0.5000000 0.5000000

```

Markovchain 781

Unnamed Markov chain

```

A 3 - dimensional discrete Markov Chain defined by the following states:
1, 2, 3

```

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.3333333	0.3333333	0.3333333
2	1.0000000	0.0000000	0.0000000
3	1.0000000	0.0000000	0.0000000

Markovchain 782

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

	1	2
1	0.4	0.6
2	0.5	0.5

Markovchain 783

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

	1	2
1	1	0
2	1	0

Markovchain 784

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

	1
1	1

Markovchain 785

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

	1
1	1

Markovchain 786

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.0000000	0.6000000	0.4000000

```

2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

```

Markovchain 787

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:  
1, 2, 3

The transition matrix (by rows) is defined as follows:

```

      1      2      3
1 0.3333333 0.3333333 0.3333333
2 1.0000000 0.0000000 0.0000000
3 1.0000000 0.0000000 0.0000000

```

Markovchain 788

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 3

The transition matrix (by rows) is defined as follows:

```

      1      3
1 0.0 1.0
3 0.5 0.5

```

Markovchain 789

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 3

The transition matrix (by rows) is defined as follows:

```

      1      3
1 0.5 0.5
3 1.0 0.0

```

Markovchain 790

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 3

The transition matrix (by rows) is defined as follows:

```

      1      3
1 0.0 1.0
3 0.5 0.5

```

Markovchain 791

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 3

The transition matrix (by rows) is defined as follows:

```

      1      3
1 0.5 0.5

```

```
3 1.0 0.0
```

```
Markovchain 792
```

```
Unnamed Markov chain
```

```
A 2 - dimensional discrete Markov Chain defined by the following states:
1, 3
```

```
The transition matrix (by rows) is defined as follows:
```

```
      1      3
1 0.0 1.0
3 0.5 0.5
```

```
Markovchain 793
```

```
Unnamed Markov chain
```

```
A 2 - dimensional discrete Markov Chain defined by the following states:
1, 3
```

```
The transition matrix (by rows) is defined as follows:
```

```
      1      3
1 0.5 0.5
3 1.0 0.0
```

```
Markovchain 794
```

```
Unnamed Markov chain
```

```
A 1 - dimensional discrete Markov Chain defined by the following states:
1
```

```
The transition matrix (by rows) is defined as follows:
```

```
      1
1 1
```

```
Markovchain 795
```

```
Unnamed Markov chain
```

```
A 3 - dimensional discrete Markov Chain defined by the following states:
1, 2, 3
```

```
The transition matrix (by rows) is defined as follows:
```

```
      1      2      3
1 0.0000000 0.8000000 0.2000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333
```

```
Markovchain 796
```

```
Unnamed Markov chain
```

```
A 3 - dimensional discrete Markov Chain defined by the following states:
1, 2, 3
```

```
The transition matrix (by rows) is defined as follows:
```

```
      1      2      3
1 0.3333333 0.3333333 0.3333333
2 1.0000000 0.0000000 0.0000000
3 1.0000000 0.0000000 0.0000000
```

Markovchain 797

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 798

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 799

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

1 2 3

1 0.0000000 0.6000000 0.4000000

2 0.3333333 0.3333333 0.3333333

3 0.3333333 0.3333333 0.3333333

Markovchain 800

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

1 2 3

1 0.3333333 0.3333333 0.3333333

2 1.0000000 0.0000000 0.0000000

3 1.0000000 0.0000000 0.0000000

Markovchain 801

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

1 3

1 0.0 1.0

3 0.5 0.5

Markovchain 802

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

```

      1   3
1 0.5 0.5
3 1.0 0.0
```

Markovchain 803

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```

      1
1 1
```

Markovchain 804

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```

      1   2
1 0.4 0.6
2 0.5 0.5
```

Markovchain 805

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```

      1   2
1 1 0
2 1 0
```

Markovchain 806

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

```

      1       2       3
1 0.2000000 0.4000000 0.4000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333
```

Markovchain 807

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

```

1, 2, 3
The transition matrix (by rows) is defined as follows:
  1 2 3
1 1 0 0
2 1 0 0
3 1 0 0

Markovchain 808
Unnamed Markov chain
A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
  1
1 1

Markovchain 809
Unnamed Markov chain
A 2 - dimensional discrete Markov Chain defined by the following states:
1, 2
The transition matrix (by rows) is defined as follows:
  1 2
1 0.0 1.0
2 0.5 0.5

Markovchain 810
Unnamed Markov chain
A 2 - dimensional discrete Markov Chain defined by the following states:
2, 3
The transition matrix (by rows) is defined as follows:
  2 3
2 0.0 1.0
3 0.5 0.5

Markovchain 811
Unnamed Markov chain
A 2 - dimensional discrete Markov Chain defined by the following states:
1, 3
The transition matrix (by rows) is defined as follows:
  1 3
1 0.5 0.5
3 1.0 0.0

Markovchain 812
Unnamed Markov chain
A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:

```

```

1
1 1

```

Markovchain 813

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

```

1
The transition matrix (by rows) is defined as follows:
1
1 1

```

Markovchain 814

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

```

1
The transition matrix (by rows) is defined as follows:
1
1 1

```

Markovchain 815

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

```

1
The transition matrix (by rows) is defined as follows:
1
1 1

```

Markovchain 816

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

```

1
The transition matrix (by rows) is defined as follows:
1
1 1

```

Markovchain 817

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

```

1
The transition matrix (by rows) is defined as follows:
1
1 1

```

Markovchain 818

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

```

1, 2

```

The transition matrix (by rows) is defined as follows:

```

    1  2
1 0.6 0.4
2 0.5 0.5

```

Markovchain 819

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```

    1 2
1 1 0
2 1 0

```

Markovchain 820

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```

    1
1 1

```

Markovchain 821

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```

    1
1 1

```

Markovchain 822

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```

    1
1 1

```

Markovchain 823

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```

    1
1 1

```

Markovchain 824

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 825

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 826

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 827

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 828

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 0.8 0.2

2 0.5 0.5

Markovchain 829

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 1 0

2 1 0

Markovchain 830

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 0.6 0.4

2 0.5 0.5

Markovchain 831

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 1 0

2 1 0

Markovchain 832

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 0.8 0.2

2 0.5 0.5

Markovchain 833

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 0.5 0.5

2 1.0 0.0

Markovchain 834

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

1 2 3

1 0.0000000 0.3333333 0.6666667

2 1.0000000 0.0000000 0.0000000

3 0.3333333 0.3333333 0.3333333

Markovchain 835

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	1	0	0
2	1	0	0
3	1	0	0

Markovchain 836

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

	1	3
1	0.0	1.0
3	0.5	0.5

Markovchain 837

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.3333333	0.3333333	0.3333333
2	0.3333333	0.3333333	0.3333333
3	0.2000000	0.8000000	0.0000000

Markovchain 838

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

	1	2
1	1	0
2	1	0

Markovchain 839

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

	1	2
1	0.4	0.6
2	0.5	0.5

Markovchain 840

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 1 0

2 1 0

Markovchain 841

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.2000000	0.6000000	0.2000000
2	0.3333333	0.3333333	0.3333333
3	0.3333333	0.3333333	0.3333333

Markovchain 842

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	1	0	0
2	1	0	0
3	1	0	0

Markovchain 843

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1	1
---	---

Markovchain 844

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1	1
---	---

Markovchain 845

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 846

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 847

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 848

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 849

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 0.6 0.4

2 0.5 0.5

Markovchain 850

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

1 2 3

1 0.000000 0.000000 1.000000

```

2 0.0000000 0.0000000 1.0000000
3 0.3333333 0.3333333 0.3333333

```

Markovchain 851

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 3

The transition matrix (by rows) is defined as follows:

```

      1  3
1 0.5 0.5
3 1.0 0.0

```

Markovchain 852

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 2

The transition matrix (by rows) is defined as follows:

```

      1  2
1 0.8 0.2
2 0.5 0.5

```

Markovchain 853

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 2

The transition matrix (by rows) is defined as follows:

```

      1  2
1 1 0
2 1 0

```

Markovchain 854

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:  
1

The transition matrix (by rows) is defined as follows:

```

      1
1 1

```

Markovchain 855

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:  
1, 2, 3

The transition matrix (by rows) is defined as follows:

```

      1      2      3
1 0.0000000 0.8000000 0.2000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

```

Markovchain 856

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.3333333	0.3333333	0.3333333
2	1.0000000	0.0000000	0.0000000
3	1.0000000	0.0000000	0.0000000

Markovchain 857

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.0000000	0.4000000	0.6000000
2	0.3333333	0.3333333	0.3333333
3	0.3333333	0.3333333	0.3333333

Markovchain 858

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.3333333	0.3333333	0.3333333
2	1.0000000	0.0000000	0.0000000
3	1.0000000	0.0000000	0.0000000

Markovchain 859

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

	1
1	1

Markovchain 860

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

	1
1	1

Markovchain 861

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 862

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 863

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 864

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 865

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 866

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 867

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 0.4 0.6

2 0.5 0.5

Markovchain 868

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 1 0

2 1 0

Markovchain 869

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 0.0 1.0

2 0.5 0.5

Markovchain 870

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 0.5 0.5

2 1.0 0.0

Markovchain 871

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 872

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:  
 1  
 The transition matrix (by rows) is defined as follows:  
 1  
 1 1

Markovchain 873

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:  
 1  
 The transition matrix (by rows) is defined as follows:  
 1  
 1 1

Markovchain 874

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:  
 1  
 The transition matrix (by rows) is defined as follows:  
 1  
 1 1

Markovchain 875

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
 1, 3  
 The transition matrix (by rows) is defined as follows:  
 1 3  
 1 0.0 1.0  
 3 0.5 0.5

Markovchain 876

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
 1, 3  
 The transition matrix (by rows) is defined as follows:  
 1 3  
 1 0.5 0.5  
 3 1.0 0.0

Markovchain 877

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:  
 1, 2  
 The transition matrix (by rows) is defined as follows:  
 1 2  
 1 0.2 0.8

```
2 0.5 0.5
```

```
Markovchain 878
```

```
Unnamed Markov chain
```

```
A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 2
```

```
The transition matrix (by rows) is defined as follows:
```

```
1 2  
1 1 0  
2 1 0
```

```
Markovchain 879
```

```
Unnamed Markov chain
```

```
A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 2
```

```
The transition matrix (by rows) is defined as follows:
```

```
1 2  
1 0.4 0.6  
2 0.5 0.5
```

```
Markovchain 880
```

```
Unnamed Markov chain
```

```
A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 2
```

```
The transition matrix (by rows) is defined as follows:
```

```
1 2  
1 1 0  
2 1 0
```

```
Markovchain 881
```

```
Unnamed Markov chain
```

```
A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 2
```

```
The transition matrix (by rows) is defined as follows:
```

```
1 2  
1 0.8 0.2  
2 0.5 0.5
```

```
Markovchain 882
```

```
Unnamed Markov chain
```

```
A 2 - dimensional discrete Markov Chain defined by the following states:  
1, 2
```

```
The transition matrix (by rows) is defined as follows:
```

```
1 2  
1 0.75 0.25  
2 1.00 0.00
```

Markovchain 883

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 1 0

2 1 0

Markovchain 884

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 885

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 886

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

1 2 3

1 0.4000000 0.4000000 0.2000000

2 0.3333333 0.3333333 0.3333333

3 0.3333333 0.3333333 0.3333333

Markovchain 887

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

1 2 3

1 1 0 0

2 1 0 0

3 0 1 0

Markovchain 888

Unnamed Markov chain

```

A 2 - dimensional discrete Markov Chain defined by the following states:
1, 2
The transition matrix (by rows) is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain 889
```

```
Unnamed Markov chain
```

```

A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
  1
1 1

```

```
Markovchain 890
```

```
Unnamed Markov chain
```

```

A 2 - dimensional discrete Markov Chain defined by the following states:
1, 2
The transition matrix (by rows) is defined as follows:
  1 2
1 0.6 0.4
2 0.5 0.5

```

```
Markovchain 891
```

```
Unnamed Markov chain
```

```

A 2 - dimensional discrete Markov Chain defined by the following states:
1, 2
The transition matrix (by rows) is defined as follows:
      1      2
1 0.3333333 0.6666667
2 0.0000000 1.0000000

```

```
Markovchain 892
```

```
Unnamed Markov chain
```

```

A 2 - dimensional discrete Markov Chain defined by the following states:
1, 2
The transition matrix (by rows) is defined as follows:
  1 2
1 1 0
2 1 0

```

```
Markovchain 893
```

```
Unnamed Markov chain
```

```

A 2 - dimensional discrete Markov Chain defined by the following states:
1, 3
The transition matrix (by rows) is defined as follows:

```

```

      1  3
1 0.2 0.8
3 0.5 0.5

```

Markovchain 894

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

```

      1      2      3
1 0.0000000 1.0000000 0.0000000
2 0.3333333 0.3333333 0.3333333
3 0.7500000 0.2500000 0.0000000

```

Markovchain 895

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

```

      1      2      3
1 0.0000000 0.0000000 1.0000000
2 0.0000000 0.0000000 1.0000000
3 0.3333333 0.3333333 0.3333333

```

Markovchain 896

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

3

The transition matrix (by rows) is defined as follows:

```

      3
3 1

```

Markovchain 897

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

```

      1  3
1 0.5 0.5
3 1.0 0.0

```

Markovchain 898

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```

      1

```

```
1 1
```

```
Markovchain 899
```

```
Unnamed Markov chain
```

```
A 1 - dimensional discrete Markov Chain defined by the following states:
```

```
1
```

```
The transition matrix (by rows) is defined as follows:
```

```
1
```

```
1 1
```

```
Markovchain 900
```

```
Unnamed Markov chain
```

```
A 1 - dimensional discrete Markov Chain defined by the following states:
```

```
1
```

```
The transition matrix (by rows) is defined as follows:
```

```
1
```

```
1 1
```

```
Markovchain 901
```

```
Unnamed Markov chain
```

```
A 1 - dimensional discrete Markov Chain defined by the following states:
```

```
1
```

```
The transition matrix (by rows) is defined as follows:
```

```
1
```

```
1 1
```

```
Markovchain 902
```

```
Unnamed Markov chain
```

```
A 2 - dimensional discrete Markov Chain defined by the following states:
```

```
1, 3
```

```
The transition matrix (by rows) is defined as follows:
```

```
1 3
```

```
1 0.0 1.0
```

```
3 0.5 0.5
```

```
Markovchain 903
```

```
Unnamed Markov chain
```

```
A 2 - dimensional discrete Markov Chain defined by the following states:
```

```
1, 3
```

```
The transition matrix (by rows) is defined as follows:
```

```
1 3
```

```
1 0.5 0.5
```

```
3 1.0 0.0
```

```
Markovchain 904
```

```
Unnamed Markov chain
```

```
A 2 - dimensional discrete Markov Chain defined by the following states:
```

```

1, 3
The transition matrix (by rows) is defined as follows:
  1  3
1 0.0 1.0
3 0.5 0.5

Markovchain 905
Unnamed Markov chain
A 2 - dimensional discrete Markov Chain defined by the following states:
1, 3
The transition matrix (by rows) is defined as follows:
  1  3
1 0.5 0.5
3 1.0 0.0

Markovchain 906
Unnamed Markov chain
A 2 - dimensional discrete Markov Chain defined by the following states:
1, 2
The transition matrix (by rows) is defined as follows:
  1  2
1 0.0 1.0
2 0.5 0.5

Markovchain 907
Unnamed Markov chain
A 2 - dimensional discrete Markov Chain defined by the following states:
1, 2
The transition matrix (by rows) is defined as follows:
  1  2
1 0.5 0.5
2 0.8 0.2

Markovchain 908
Unnamed Markov chain
A 3 - dimensional discrete Markov Chain defined by the following states:
1, 2, 3
The transition matrix (by rows) is defined as follows:
  1      2      3
1 0.0000000 0.0000000 1.0000000
2 0.0000000 0.0000000 1.0000000
3 0.3333333 0.3333333 0.3333333

Markovchain 909
Unnamed Markov chain
A 3 - dimensional discrete Markov Chain defined by the following states:
1, 2, 3

```

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.3333333	0.3333333	0.3333333
2	0.3333333	0.3333333	0.3333333
3	0.4000000	0.6000000	0.0000000

Markovchain 910

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

	1	2
1	1	0
2	1	0

Markovchain 911

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

	1
1	1

Markovchain 912

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

	1	3
1	0.0	1.0
3	0.5	0.5

Markovchain 913

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

	1	3
1	0.5	0.5
3	1.0	0.0

Markovchain 914

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

	1
1	1

1 1

Markovchain 915

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 0.8 0.2

2 0.5 0.5

Markovchain 916

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 1 0

2 1 0

Markovchain 917

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 0.8 0.2

2 0.5 0.5

Markovchain 918

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

1 2 3

1 0.2500000 0.0000000 0.7500000

2 0.0000000 0.0000000 1.0000000

3 0.3333333 0.3333333 0.3333333

Markovchain 919

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

1 2 3

1 1.0000000 0.0000000 0.0000000

2 0.3333333 0.3333333 0.3333333

```
3 0.7500000 0.2500000 0.0000000
```

```
Markovchain 920
```

```
Unnamed Markov chain
```

```
A 2 - dimensional discrete Markov Chain defined by the following states:
1, 2
```

```
The transition matrix (by rows) is defined as follows:
```

```
1 2
1 1 0
2 1 0
```

```
Markovchain 921
```

```
Unnamed Markov chain
```

```
A 3 - dimensional discrete Markov Chain defined by the following states:
1, 2, 3
```

```
The transition matrix (by rows) is defined as follows:
```

```
1 2 3
1 0.6000000 0.2000000 0.2000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333
```

```
Markovchain 922
```

```
Unnamed Markov chain
```

```
A 3 - dimensional discrete Markov Chain defined by the following states:
1, 2, 3
```

```
The transition matrix (by rows) is defined as follows:
```

```
1 2 3
1 0 0 1
2 0 1 0
3 0 1 0
```

```
Markovchain 923
```

```
Unnamed Markov chain
```

```
A 3 - dimensional discrete Markov Chain defined by the following states:
1, 2, 3
```

```
The transition matrix (by rows) is defined as follows:
```

```
1 2 3
1 0.3333333 0.3333333 0.3333333
2 0.5000000 0.5000000 0.0000000
3 0.0000000 1.0000000 0.0000000
```

```
Markovchain 924
```

```
Unnamed Markov chain
```

```
A 2 - dimensional discrete Markov Chain defined by the following states:
1, 2
```

```
The transition matrix (by rows) is defined as follows:
```

```
1 2
```

```

1 1 0
2 1 0

```

Markovchain 925

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```

1
1 1

```

Markovchain 926

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

```

1
1 1

```

Markovchain 927

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```

1 2
1 0.8 0.2
2 0.5 0.5

```

Markovchain 928

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```

1 2
1 0.75 0.25
2 1.00 0.00

```

Markovchain 929

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```

1 2
1 1 0
2 1 0

```

Markovchain 930

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 931

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 932

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 933

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 0.2 0.8

2 0.5 0.5

Markovchain 934

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 1 0

2 1 0

Markovchain 935

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 936

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 0.2 0.8

2 0.5 0.5

Markovchain 937

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

1 2 3

1 0.0000000 1.0000000 0.0000000

2 0.0000000 0.2500000 0.7500000

3 0.3333333 0.3333333 0.3333333

Markovchain 938

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

1 2 3

1 0.3333333 0.3333333 0.3333333

2 1.0000000 0.0000000 0.0000000

3 1.0000000 0.0000000 0.0000000

Markovchain 939

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 940

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

1 2 3

1 0.0000000 0.6000000 0.4000000

2 0.3333333 0.3333333 0.3333333

```
3 0.3333333 0.3333333 0.3333333
```

```
Markovchain 941
```

```
Unnamed Markov chain
```

```
A 3 - dimensional discrete Markov Chain defined by the following states:
1, 2, 3
```

```
The transition matrix (by rows) is defined as follows:
```

```
      1      2      3
1 0.3333333 0.3333333 0.3333333
2 0.3333333 0.3333333 0.3333333
3 1.0000000 0.0000000 0.0000000
```

```
Markovchain 942
```

```
Unnamed Markov chain
```

```
A 3 - dimensional discrete Markov Chain defined by the following states:
1, 2, 3
```

```
The transition matrix (by rows) is defined as follows:
```

```
  1 2 3
1 1 0 0
2 1 0 0
3 1 0 0
```

```
Markovchain 943
```

```
Unnamed Markov chain
```

```
A 2 - dimensional discrete Markov Chain defined by the following states:
1, 2
```

```
The transition matrix (by rows) is defined as follows:
```

```
  1 2
1 0.6 0.4
2 0.5 0.5
```

```
Markovchain 944
```

```
Unnamed Markov chain
```

```
A 2 - dimensional discrete Markov Chain defined by the following states:
1, 2
```

```
The transition matrix (by rows) is defined as follows:
```

```
  1 2
1 1 0
2 1 0
```

```
Markovchain 945
```

```
Unnamed Markov chain
```

```
A 1 - dimensional discrete Markov Chain defined by the following states:
1
```

```
The transition matrix (by rows) is defined as follows:
```

```
  1
1 1
```

Markovchain 946

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 947

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 948

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 949

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 950

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 951

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

```
1 0.2 0.8
2 0.5 0.5
```

Markovchain 952

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```
1 2
1 1 0
2 1 0
```

Markovchain 953

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```
1 2
1 0.4 0.6
2 0.5 0.5
```

Markovchain 954

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```
1 2
1 1 0
2 1 0
```

Markovchain 955

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

```
1 2
1 0.0 1.0
2 0.5 0.5
```

Markovchain 956

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

2, 3

The transition matrix (by rows) is defined as follows:

```
2 3
2 0.0 1.0
3 0.5 0.5
```

Markovchain 957

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 3

The transition matrix (by rows) is defined as follows:

1 3

1 0.5 0.5

3 1.0 0.0

Markovchain 958

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 959

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

1

1 1

Markovchain 960

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 0.8 0.2

2 0.5 0.5

Markovchain 961

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

1 2

1 1 0

2 1 0

Markovchain 962

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

```

1
The transition matrix (by rows) is defined as follows:
1
1 1

Markovchain 963
Unnamed Markov chain
A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
1
1 1

Markovchain 964
Unnamed Markov chain
A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
1
1 1

Markovchain 965
Unnamed Markov chain
A 2 - dimensional discrete Markov Chain defined by the following states:
1, 2
The transition matrix (by rows) is defined as follows:
1 2
1 0.8 0.2
2 0.5 0.5

Markovchain 966
Unnamed Markov chain
A 2 - dimensional discrete Markov Chain defined by the following states:
1, 2
The transition matrix (by rows) is defined as follows:
1 2
1 1 0
2 1 0

Markovchain 967
Unnamed Markov chain
A 1 - dimensional discrete Markov Chain defined by the following states:
1
The transition matrix (by rows) is defined as follows:
1
1 1

```

Markovchain 968

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.0000000	0.6000000	0.4000000
2	0.3333333	0.3333333	0.3333333
3	0.3333333	0.3333333	0.3333333

Markovchain 969

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

1, 2, 3

The transition matrix (by rows) is defined as follows:

	1	2	3
1	0.3333333	0.3333333	0.3333333
2	1.0000000	0.0000000	0.0000000
3	1.0000000	0.0000000	0.0000000

Markovchain 970

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

	1
1	1

Markovchain 971

Unnamed Markov chain

A 1 - dimensional discrete Markov Chain defined by the following states:

1

The transition matrix (by rows) is defined as follows:

	1
1	1

Markovchain 972

Unnamed Markov chain

A 2 - dimensional discrete Markov Chain defined by the following states:

1, 2

The transition matrix (by rows) is defined as follows:

	1	2
1	0.8	0.2
2	0.5	0.5

Markovchain 973

Unnamed Markov chain

```

A 2 - dimensional discrete Markov Chain defined by the following states:
1, 2
The transition matrix (by rows) is defined as follows:

c 0 1
```

Markovchain 6

Unnamed Markov chain

A 3 - dimensional discrete Markov Chain defined by the following states:

a, b, c

The transition matrix (by rows) is defined as follows:

```
      a      b      c
a 0.3333333 0.3333333 0.3333333
b 0.3333333 0.3333333 0.3333333
c 0.5000000 0.5000000 0.0000000
```

If any transition contains NA, it will be ignored in the results as the above example showed.

### 5.3. Prediction

The  $n$ -step forward predictions can be obtained using the `predict` methods explicitly written for `markovchain` and `markovchainList` objects. The prediction is the mode of the conditional distribution of  $X_{t+1}$  given  $X_t = s_j$ , being  $s_j$  the last realization of the DTMC (homogeneous or non-homogeneous).

#### *Predicting from a markovchain object*

The 3-days forward predictions from `markovchain` object can be generated as follows, assuming that the last two days were respectively “cloudy” and “sunny”.

```
R> predict(object = weatherFittedMLE$estimate, newdata = c("cloudy", "sunny"),
R+      n.ahead = 3)
```

```
[1] "sunny" "sunny" "sunny"
```

#### *Predicting from a markovchainList object*

Given an initial two year Healty status, the 5-year ahead prediction of any CCRC guest is

```
R> predict(mcCCRC, newdata = c("H", "H"), n.ahead = 5)
```

```
[1] "H" "D" "D"
```

The prediction has stopped at time sequence since the underlying non-homogeneous Markov chain has a length of four. In order to continue five years ahead, the `continue=TRUE` parameter setting makes the `predict` method keeping to use the last `markovchain` in the sequence list.

```
R> predict(mcCCRC, newdata = c("H", "H"), n.ahead = 5, continue = TRUE)
```

```
[1] "H" "D" "D" "D" "D"
```

## 5.4. Statistical Tests

In this section, we describe the statistical tests: assessing the Markov property (`verifyMarkovProperty`), the order (`assessOrder`), the stationarity (`assessStationarity`) of a Markov chain sequence, and the divergence test for empirically estimated transition matrices (`divergenceTest`). Most of such tests are based on the  $\chi^2$  statistics. Relevant references are [Kullback \*et al.\* \(1962\)](#) and [Anderson and Goodman \(1957\)](#).

All such tests have been designed for small samples, since it is easy to detect departures from Markov property as long as the sample size increases. In addition, the accuracy of the statistical inference functions has been questioned and will be thoroughly investigated in future versions of the package.

### *Assessing the Markov property of a Markov chain sequence*

The `verifyMarkovProperty` function verifies whether the Markov property holds for the given chain. The test implemented in the package looks at triplets of successive observations. If  $x_1, x_2, \dots, x_N$  is a set of observations and  $n_{ijk}$  is the number of times  $t$  ( $1 \leq t \leq N - 2$ ) such that  $x_t = i, x_{t+1} = j, x_{t+2} = k$ , then if the Markov property holds  $n_{ijk}$  follows a Binomial distribution with parameters  $n_{ij}$  and  $p_{jk}$ . A classical  $\chi^2$  test can check this distributional assumption, since  $\sum_i \sum_j \sum_k \frac{n_{ijk} - n_{ij}p_{jk}}{n_{ij}p_{jk}} \sim \chi^2(|S|^3)$  where  $|S|$  is the cardinality of the state space.

```
R> sample_sequence<-c("a", "b", "a", "a", "a", "a", "b", "a", "b", "a",
R+                    "b", "a", "a", "b", "b", "b", "a")
R> verifyMarkovProperty(sample_sequence)
```

```
Warning in verifyMarkovProperty(sample_sequence): The accuracy of the
statistical inference functions has been questioned. It will be thoroughly
investigated in future versions of the package.
```

```
Testing markovianity property on given data sequence
Chi - square statistic is: 0.28
Degrees of freedom are: 8
And corresponding p-value is: 0.9999857
```

### *Assessing the order of a Markov chain sequence*

The `assessOrder` function checks whether the given chain is of first order or of second order. For each possible present state, we construct a contingency table of the frequency of the future state for each past to present state transition as shown in Table 6.

Using the table, the function performs the  $\chi^2$  test by calling the `chisq.test` function. This test returns a list of the chi-squared value and the p-value. If the p-value is greater than the given significance level, we cannot reject the hypothesis that the sequence is of first order.

past	present	future a	future b
a	a	2	2
b	a	2	2

Table 6: Contingency table to assess the order for the present state a.

```
R> data(rain)
R> assessOrder(rain$rain)
```

Warning in `assessOrder(rain$rain)`: The accuracy of the statistical inference functions has been questioned. It will be thoroughly investigated in future versions of the package.

The `assessOrder` test statistic is: 26.09575  
 The Chi-Square d.f. are: 12  
 The p-value is: 0.01040395

#### *Assessing the stationarity of a Markov chain sequence*

The `assessStationarity` function assesses if the transition probabilities of the given chain change over time. To be more specific, the chain is stationary if the following condition meets.

$$p_{ij}(t) = p_{ij} \quad \text{for all } t \quad (21)$$

For each possible state, we construct a contingency table of the estimated transition probabilities over time as shown in Table 7.

time (t)	probability of transition to a	probability of transition to b
1	0	1
2	0	1
.	.	.
.	.	.
.	.	.
16	0.44	0.56

Table 7: Contingency table to assess the stationarity of the state a.

Using the table, the function performs the  $\chi^2$  test by calling the `chisq.test` function. This test returns a list of the chi-squared value and the p-value. If the p-value is greater than the given significance level, we cannot reject the hypothesis that the sequence is stationary.

```
R> assessStationarity(rain$rain, 10)
```

Warning in `assessStationarity(rain$rain, 10)`: The accuracy of the statistical inference functions has been questioned. It will be thoroughly investigated in future versions of the package.

Warning in chisq.test(mat): Chi-squared approximation may be incorrect

Warning in chisq.test(mat): Chi-squared approximation may be incorrect

Warning in chisq.test(mat): Chi-squared approximation may be incorrect

The assessStationarity test statistic is: 4.181815

The Chi-Square d.f. are: 54

The p-value is: 1

### *Divergence tests for empirically estimated transition matrices*

This section discusses tests developed to verify whether:

1. An empirical transition matrix is consistent with a theoretical one.
2. Two or more empirical transition matrices belongs to the same DTMC.

The first test is implemented by the `verifyEmpiricalToTheoretical` function. Bein  $f_{ij}$  the raw transition count, [Kullback et al. \(1962\)](#) shows that  $2 * \sum_{i=1}^r \sum_{j=1}^r f_{ij} \ln \frac{f_{ij}}{f_{i.} P(E_j|E_i)} \sim \chi^2(r * (r - 1))$ . The following example is taken from [Kullback et al. \(1962\)](#):

```
R> sequence<-c(0,1,2,2,1,0,0,0,0,0,0,1,2,2,2,1,0,0,1,0,0,0,0,0,0,1,1,
R+ 2,0,0,2,1,1,0,0,0,0,0,0,0,0,0,0,0,0,0,0,0,1,1,1,1,0,0,0,0,2,1,0,
R+ 0,2,1,0,0,0,0,0,0,1,1,1,2,2,0,0,2,1,1,1,1,2,1,1,1,1,1,1,1,1,0,2,
R+ 0,1,1,0,0,0,1,2,2,0,0,0,0,0,0,0,2,2,2,1,1,1,1,0,1,1,1,1,0,0,2,1,1,
R+ 0,0,0,0,0,2,2,1,1,1,1,1,2,1,2,0,0,0,1,2,2,2,0,0,0,1,1)
R> mc=matrix(c(5/8,1/4,1/8,1/4,1/2,1/4,1/4,3/8,3/8),byrow=TRUE, nrow=3)
R> rownames(mc)<-colnames(mc)<-0:2; theoreticalMc<-as(mc, "markovchain")
R> verifyEmpiricalToTheoretical(data=sequence,object=theoreticalMc)
```

Warning in `verifyEmpiricalToTheoretical(data = sequence, object = theoreticalMc)`: The accuracy of the statistical inference functions has been questioned. It will be thoroughly investigated in future versions of the package.

Testing whether the

```
  0  1  2
0 51 11  8
1 12 31  9
2  6 11 10
```

transition matrix is compatible with

```
  0      1      2
0 0.625 0.250 0.125
1 0.250 0.500 0.250
2 0.250 0.375 0.375
```

```
[1] "theoretical transition matrix"
```

ChiSq statistic is 6.551795 d.o.f are 6 corresponding p-value is 0.3642899

```

$statistic
      0
6.551795

$dof
[1] 6

$pvalue
      0
0.3642899

```

The second one is implemented by the `verifyHomogeneity` function, inspired by (Kullback *et al.* 1962, section 9). Assuming that  $i = 1, 2, \dots, s$  DTMC samples are available and that the cardinality of the state space is  $r$  it verifies whether the  $s$  chains belongs to the same unknown one. Kullback *et al.* (1962) shows that its test statistics follows a chi-square law,  $2 * \sum_{i=1}^s \sum_{j=1}^r \sum_{k=1}^r f_{ijk} \ln \frac{n * f_{ijk}}{f_{i..} f_{.jk}} \sim \chi^2(r * (s - 1))$ . Also the following example is taken from Kullback *et al.* (1962):

```

R> data(kullback)
R> verifyHomogeneity(inputList=kullback, verbose=TRUE)

```

Warning in `verifyHomogeneity(inputList = kullback, verbose = TRUE)`: The accuracy of the statistical inference functions has been questioned. It will be thoroughly investigated in future versions of the package.

```

Testing homogeneity of DTMC underlying input list
ChiSq statistic is 275.9963 d.o.f are 35 corresponding p-value is 0

```

```

$statistic
[1] 275.9963

$dof

```

## 5.5. Continuous Times Markov Chains

### Intro

The **markovchain** package provides functionality for continuous time Markov chains (CTMCs). CTMCs are a generalisation of discrete time Markov chains (DTMCs) in that we allow time to be continuous. We assume a finite state space  $S$  (for an infinite state space wouldn't fit in memory). We can think of CTMCs as Markov chains in which state transitions can happen at any time.

More formally, we would like our CTMCs to satisfy the following two properties:

- The Markov property - let  $F_{X(s)}$  denote the information about  $X$  upto time  $s$ . Let  $j \in S$  and  $s \leq t$ . Then,  $P(X(t) = j | F_{X(s)}) = P(X(t) = j | X(s))$ .
- Time homogeneity -  $P(X(t) = j | X(s) = k) = P(X(t-s) = j | X(0) = k)$ .

If both the above properties are satisfied, it is referred to as a time-homogeneous CTMC. If a transition occurs at time  $t$ , then  $X(t)$  denotes the new state and  $X(t) \neq X(t-)$ .

Now, let  $X(0) = x$  and let  $T_x$  be the time a transition occurs from this state. We are interested in the distribution of  $T_x$ . For  $s, t \geq 0$ , it can be shown that  $P(T_x > s+t | T_x > s) = P(T_x > t)$

This is the memory less property that only the exponential random variable exhibits. Therefore, this is the sought distribution, and each state  $s \in S$  has an exponential holding parameter  $\lambda(s)$ . Since  $ET_x = \frac{1}{\lambda(x)}$ , higher the rate  $\lambda(x)$ , smaller the expected time of transitioning out of the state  $x$ .

However, specifying this parameter alone for each state would only paint an incomplete picture of our CTMC. To see why, consider a state  $x$  that may transition to either state  $y$  or  $z$ . The holding parameter enables us to predict when a transition may occur if we start off in state  $x$ , but tells us nothing about which state will be next.

To this end, we also need transition probabilities associated with the process, defined as follows (for  $y \neq x$ ) -  $p_{xy} = P(X(T_x) = y | X(0) = x)$ . Note that  $\sum_{y \neq x} p_{xy} = 1$ . Let  $Q$  denote this transition matrix ( $Q_{ij} = p_{ij}$ ). What is key here is that  $T_x$  and the state  $y$  are independent random variables. Let's define  $\lambda(x, y) = \lambda(x)p_{xy}$

We now look at Kolmogorov's backward equation. Let's define  $P_{ij}(t) = P(X(t) = j | X(0) = i)$  for  $i, j \in S$ . The backward equation is given by (it can be proved)  $P_{ij}(t) = \delta_{ij}e^{-\lambda(i)t} + \int_0^t \lambda(i)e^{-\lambda(i)s} \sum_{k \neq i} Q_{ik}P_{kj}(t-s)ds$ . Basically, the first term is non-zero if and only if  $i = j$  and represents the probability that the first transition from state  $i$  occurs after time  $t$ . This would mean that at  $t$ , the state is still  $i$ . The second term accounts for any transitions that may occur before time  $t$  and denotes the probability that at time  $t$ , when the smoke clears, we are in state  $j$ .

This equation can be represented compactly as follows  $P'(t) = AP(t)$  where  $A$  is the *generator* matrix.

$$A(i, j) = \begin{cases} \lambda(i, j) & \text{if } i \neq j \\ -\lambda(i) & \text{else.} \end{cases}$$

Observe that the sum of each row is 0. A CTMC can be completely specified by the generator matrix.

### Stationary Distributions

The following theorem guarantees the existence of a unique stationary distribution for CTMCs. Note that  $X(t)$  being irreducible and recurrent is the same as  $X_n(t)$  being irreducible and recurrent.

Suppose that  $X(t)$  is irreducible and recurrent. Then  $X(t)$  has an invariant measure  $\eta$ , which is unique up to multiplicative factors. Moreover, for each  $k \in S$ , we have

$$\eta_k = \frac{\pi_k}{\lambda(k)}$$

where  $\pi$  is the unique invariant measure of the embedded discrete time Markov chain  $X_n$ . Finally,  $\eta$  satisfies

$$0 < \eta_j < \infty, \forall j \in S$$

and if  $\sum_i \eta_i < \infty$  then  $\eta$  can be normalised to get a stationary distribution.

### Estimation

Let the data set be  $D = \{(s_0, t_0), (s_1, t_1), \dots, (s_{N-1}, t_{N-1})\}$  where  $N = |D|$ . Each  $s_i$  is a state from the state space  $S$  and during the time  $[t_i, t_{i+1}]$  the chain is in state  $s_i$ . Let the parameters be represented by  $\theta = \{\lambda, P\}$  where  $\lambda$  is the vector of holding parameters for each state and  $P$  the transition matrix of the embedded discrete time Markov chain.

Then the probability is given by

$$Pr(D|\theta) \propto \lambda(s_0)e^{-\lambda(s_0)(t_1-t_0)} Pr(s_1|s_0) \cdot \dots \cdot \lambda(s_{N-2})e^{-\lambda(s_{N-2})(t_{N-1}-t_{N-2})} Pr(s_{N-1}|s_{N-2})$$

Let  $n(j|i)$  denote the number of  $i \rightarrow j$  transitions in  $D$ , and  $n(i)$  the number of times  $s_i$  occurs in  $D$ . Let  $t(s_i)$  denote the total time the chain spends in state  $s_i$ .

Then the MLEs are given by

$$\hat{\lambda}(s) = \frac{n(s)}{t(s)}, Pr(\hat{j}|i) = \frac{n(j|i)}{n(i)}$$

### Expected Hitting Time

The package provides a function **ExpectedTime** to calculate average hitting time from one state to another. Let the final state be  $j$ , then for every state  $i \in S$ , where  $S$  is the set of all states and holding time  $q_i > 0$  for every  $i \neq j$ . Assuming the conditions to be true, expected hitting time is equal to minimal non-negative solution vector  $p$  to the system of linear equations:

$$\begin{cases} p_k = 0 & k = j \\ -\sum_{l \in I} q_{kl} p_k = 1 & k \neq j \end{cases} \quad (22)$$

### Probability at time $t$

The package provides a function **probabilityatT** to calculate probability of every state according to given **ctmc** object. Here we use Kolmogorov's backward equation  $P(t) = P(0)e^{tQ}$  for  $t \geq 0$  and  $P(0) = I$ . Here  $P(t)$  is the transition function at time  $t$ . The value  $P(t)[i][j]$  at time  $P(t)$  describes the probability of the state at time  $t$  to be equal to  $j$  if it was equal to  $i$  at time  $t = 0$ . It takes care of the case when **ctmc** object has a generator represented by columns. If initial state is not provided, the function returns the whole transition matrix  $P(t)$ .

### Examples

To create a CTMC object, you need to provide a valid generator matrix, say  $Q$ . The CTMC object has the following slots - states, generator, byrow, name (look at the documentation object for further details). Consider the following example in which we aim to model the transition of a molecule from the  $\sigma$  state to the  $\sigma^*$  state. When in the former state, if it absorbs sufficient energy, it can make the jump to the latter state and remains there for some time before transitioning back to the original state. Let us model this by a CTMC:

```
R> energyStates <- c("sigma", "sigma_star")
R> byRow <- TRUE
R> gen <- matrix(data = c(-3, 3,
R+                      1, -1), nrow = 2,
R+                      byrow = byRow, dimnames = list(energyStates, energyStates))
R> molecularCTMC <- new("ctmc", states = energyStates,
R+                      byrow = byRow, generator = gen,
R+                      name = "Molecular Transition Model")
```

To generate random CTMC transitions, we provide an initial distribution of the states. This must be in the same order as the dimnames of the generator. The output can be returned either as a list or a data frame.

```
R> statesDist <- c(0.8, 0.2)
R> rctmc(n = 3, ctmc = molecularCTMC, initDist = statesDist, out.type = "df", include.T0 = FALSE)

  states      time
1 sigma_star 0.477366830117871
2   sigma    0.487286495735041
3 sigma_star 0.569292154387675
```

$n$  represents the number of samples to generate. There is an optional argument  $T$  for `rctmc`. It represents the time of termination of the simulation. To use this feature, set  $n$  to a very high value, say `Inf` (since we do not know the number of transitions before hand) and set  $T$  accordingly.

```
R> statesDist <- c(0.8, 0.2)
R> rctmc(n = Inf, ctmc = molecularCTMC, initDist = statesDist, T = 2)

[[1]]
[1] "sigma"      "sigma_star" "sigma"      "sigma_star" "sigma"

[[2]]
[1] 0.00000000 0.07572635 0.42583737 1.50738635 1.71622954
```

To obtain the stationary distribution simply invoke the `steadyStates` function

```
R> steadyStates(molecularCTMC)
```

```

      sigma sigma_star
[1,]  0.25      0.75

```

For fitting, use the `ctmcFit` function. It returns the MLE values for the parameters along with the confidence intervals.

```

R> data <- list(c("a", "b", "c", "a", "b", "a", "c", "b", "c"),
R+           c(0, 0.8, 2.1, 2.4, 4, 5, 5.9, 8.2, 9))
R> ctmcFit(data)

```

```

One approach to obtain the generator matrix is to apply the `logm` function from the **expm** package on a transition matrix. Numeric issues arise, see [Israel, Rosenthal, and Wei \(2001\)](#). For example, applying the standard `method` ('Higham08') on `mcWeather` raises an error, whilst the alternative method (eigenvalue decomposition) is ok. The following code estimates the generator matrix of the `mcWeather` transition matrix.

```
R> mcWeatherQ <- expm::logm(mcWeather@transitionMatrix,method='Eigen')
R> mcWeatherQ
```

```
      sunny    cloudy    rain
sunny -0.863221  2.428723 -1.565502
cloudy 4.284592 -20.116312 15.831720
rain   -4.414019 24.175251 -19.761232
```

Therefore, the “half - day” transition probability for `mcWeather` DTMC is

```
R> mcWeatherHalfDayTM <- expm::expm(mcWeatherQ*.5)
R> mcWeatherHalfDay <- new("markovchain",transitionMatrix=mcWeatherHalfDayTM,name="Half Day")
R> mcWeatherHalfDay
```

Half Day Weather Transition Matrix

A 3 - dimensional discrete Markov Chain defined by the following states:

sunny, cloudy, rain

The transition matrix (by rows) is defined as follows:

```
      sunny    cloudy    rain
sunny 0.81598647 0.1420068 0.04200677
cloudy 0.21970167 0.4401492 0.34014916
rain   0.07063048 0.5146848 0.41468476
```

The **ctmcd** package ([Pfeuffer 2017](#)) provides various functions to estimate the generator matrix (GM) of a CTMC process using different methods. The following code provides a way to join **markovchain** and **ctmcd** computations.

```
R> require(ctmcd)
```

Loading required package: ctmcd

```
R> require(expm)
```

Loading required package: expm

Loading required package: Matrix

Attaching package: 'expm'

The following object is masked from 'package:Matrix':

expm

```
R> #defines a function to transform a GM into a TM
R> gm_to_markovchain<-function(object, t=1) {
R+   if(!(class(object) %in% c("gm","matrix","Matrix")))
R+     stop("Error! Expecting either a matrix or a gm object")
R+   if ( class(object) %in% c("matrix","Matrix")) generator_matrix<-object else generator
R+   #must add importClassesFrom("markovchain",markovchain) in the NAMESPACE
R+   #must add importFrom(expm, "expm")
R+   transitionMatrix<-expm(generator_matrix*t)
R+   out<-as(transitionMatrix,"markovchain")
R+   return(out)
R+ }
R> #loading ctmc dataset
R> data(tm_abs)
R> gm0=matrix(1,8,8) #initializing
R> diag(gm0)=0
R> diag(gm0)=-rowSums(gm0)
R> gm0[8,]=0
R> gmem=gm(tm_abs,te=1,method="EM",gmguess=gm0) #estimating GM
R> mc_at_2=gm_to_markovchain(object=gmem, t=2) #converting to TM at time 2
```

## 5.6. Pseudo - Bayesian Estimation

Hu, Kiesel, and Perraudin (2002) shows an empirical quasi-bayesian method to estimate transition matrices, given an empirical  $\hat{P}$  transition matrix (estimated using the classical approach) and an a - priori estimate  $Q$ . In particular, each row of the matrix is estimated using the linear combination  $\alpha \cdot Q + (1 - \alpha) \cdot P$ , where  $\alpha$  is defined for each row as Equation 23 shows

$$\begin{cases} \hat{\alpha}_i = \frac{\hat{K}_i}{v(i) + \hat{K}_i} \\ \hat{K}_i = \frac{v(i)^2 - \sum_j Y_{ij}^2}{\sum_j (Y_{ij} - v(i) \cdot q_{ij})^2} \end{cases} \quad (23)$$

The following code returns the pseudo bayesian estimate of the transition matrix:

```
R> pseudoBayesEstimator <- function(raw, apriori){
R+   v_i <- rowSums(raw)
R+   K_i <- numeric(nrow(raw))
```

```

R+  sumSquaredY <- rowSums(raw^2)
R+  #get numerator
R+  K_i_num <- v_i^2-sumSquaredY
R+  #get denominator
R+  VQ <- matrix(0,nrow= nrow(apriori),ncol=ncol(apriori))
R+  for (i in 1:nrow(VQ)) {
R+    VQ[i,]<-v_i[i]*apriori[i,]
R+  }
R+
R+  K_i_den<-rowSums((raw - VQ)^2)
R+
R+  K_i <- K_i_num/K_i_den
R+
R+  #get the alpha vector
R+  alpha <- K_i / (v_i+K_i)
R+
R+  #empirical transition matrix
R+  Emp<-raw/rowSums(raw)
R+
R+  #get the estimate
R+  out<-matrix(0, nrow= nrow(raw),ncol=ncol(raw))
R+  for (i in 1:nrow(out)) {
R+    out[i,]<-alpha[i]*apriori[i,]+(1-alpha[i])*Emp[i,]
R+  }
R+  return(out)
R+ }

```

We then apply it to the weather example:

```

R> trueMc<-as(matrix(c(0.1, .9,.7,.3),nrow = 2, byrow = 2),"markovchain")
R> aprioriMc<-as(matrix(c(0.5, .5,.5,.5),nrow = 2, byrow = 2),"markovchain")
R>
R> smallSample<-rmarkovchain(n=20,object = trueMc)
R> smallSampleRawTransitions<-createSequenceMatrix(stringchar = smallSample)
R> pseudoBayesEstimator(
R+  raw = smallSampleRawTransitions,
R+  apriori = aprioriMc@transitionMatrix
R+ ) - trueMc@transitionMatrix

           s1          s2
s1 0.03742072 -0.03742072
s2 0.05471698 -0.05471698

R> biggerSample<-rmarkovchain(n=100,object = trueMc)
R> biggerSampleRawTransitions<-createSequenceMatrix(stringchar = biggerSample)
R> pseudoBayesEstimator(
R+  raw = biggerSampleRawTransitions,

```

```

R+  apriori = aprioriMc@transitionMatrix
R+ ) - trueMc@transitionMatrix

          s1          s2
s1  0.02873557 -0.02873557
s2 -0.12533702  0.12533702

R> bigSample<-rmarkovchain(n=1000,object = trueMc)
R> bigSampleRawTransitions<-createSequenceMatrix(stringchar = bigSample)
R> pseudoBayesEstimator(
R+  raw = bigSampleRawTransitions,
R+  apriori = aprioriMc@transitionMatrix
R+ ) - trueMc@transitionMatrix

          s1          s2
s1 -0.01047377  0.01047377
s2  0.04405698 -0.04405698

```

## 5.7. Bayesian Estimation

The **markovchain** package provides functionality for maximum a posteriori (MAP) estimation of the chain parameters (at the time of writing this document, only first order models are supported) by Bayesian inference. It also computes the probability of observing a new data set, given a (different) data set. This vignette provides the mathematical description for the methods employed by the package.

### *Notation and set-up*

The data is denoted by  $D$ , the model parameters (transition matrix) by  $\theta$ . The object of interest is  $P(\theta|D)$  (posterior density).  $\mathcal{A}$  represents an alphabet class, each of whose members represent a state of the chain. Therefore

$$D = s_0 s_1 \dots s_{N-1}, s_t \in \mathcal{A}$$

where  $N$  is the length of the data set. Also,

$$\theta = \{p(s|u), s \in \mathcal{A}, u \in \mathcal{A}\}$$

where  $\sum_{s \in \mathcal{A}} p(s|u) = 1$  for each  $u \in \mathcal{A}$ .

Our objective is to find  $\theta$  which maximises the posterior. That is, if our solution is denoted by  $\hat{\theta}$ , then

$$\hat{\theta} = \underset{\theta}{\operatorname{argmax}} P(\theta|D)$$

where the search space is the set of right stochastic matrices of dimension  $|\mathcal{A}| \times |\mathcal{A}|$ .

$n(u, s)$  denotes the number of times the word  $us$  occurs in  $D$  and  $n(u) = \sum_{s \in \mathcal{A}} n(u, s)$ . The hyperparameters are similarly denoted by  $\alpha(u, s)$  and  $\alpha(u)$  respectively.

### Methods

Given  $D$ , its likelihood conditioned on the observed initial state in  $D$  is given by

$$P(D|\theta) = \prod_{s \in \mathcal{A}} \prod_{u \in \mathcal{A}} p(s|u)^{n(u,s)}$$

Conjugate priors are used to model the prior  $P(\theta)$ . The reasons are two fold:

1. Exact expressions can be derived for the MAP estimates, expectations and even variances
2. Model order selection/comparison can be implemented easily (available in a future release of the package)

The hyperparameters determine the form of the prior distribution, which is a product of Dirichlet distributions

$$P(\theta) = \prod_{u \in \mathcal{A}} \left\{ \frac{\Gamma(\alpha(u))}{\prod_{s \in \mathcal{A}} \Gamma(\alpha(u, s))} \prod_{s \in \mathcal{A}} p(s|u)^{\alpha(u,s)-1} \right\}$$

where  $\Gamma(\cdot)$  is the Gamma function. The hyperparameters are specified using the `hyperparam` argument in the `markovchainFit` function. If this argument is not specified, then a default value of 1 is assigned to each hyperparameter resulting in the prior distribution of each chain parameter to be uniform over  $[0, 1]$ .

Given the likelihood and the prior as described above, the evidence  $P(D)$  is simply given by

$$P(D) = \int P(D|\theta)P(\theta)d\theta$$

which simplifies to

$$P(D) = \prod_{u \in \mathcal{A}} \left\{ \frac{\Gamma(\alpha(u))}{\prod_{s \in \mathcal{A}} \Gamma(\alpha(u, s))} \frac{\prod_{s \in \mathcal{A}} \Gamma(n(u, s) + \alpha(u, s))}{\Gamma(\alpha(u) + n(u))} \right\}$$

Using Bayes' theorem, the posterior now becomes (thanks to the choice of conjugate priors)

$$P(\theta|D) = \prod_{u \in \mathcal{A}} \left\{ \frac{\Gamma(n(u) + \alpha(u))}{\prod_{s \in \mathcal{A}} \Gamma(n(u, s) + \alpha(u, s))} \prod_{s \in \mathcal{A}} p(s|u)^{n(u,s)+\alpha(u,s)-1} \right\}$$

Since this is again a product of Dirichlet distributions, the marginalised distribution of a particular parameter  $P(s|u)$  of our chain is given by

$$P(s|u) \sim \text{Beta}(n(u, s) + \alpha(u, s), n(u) + \alpha(u) - n(u, s) - \alpha(u, s))$$

Thus, the MAP estimate  $\hat{\theta}$  is given by

$$\hat{\theta} = \left\{ \frac{n(u, s) + \alpha(u, s) - 1}{n(u) + \alpha(u) - |\mathcal{A}|}, s \in \mathcal{A}, u \in \mathcal{A} \right\}$$

The function also returns the expected value, given by

$$E_{\text{post}}p(s|u) = \left\{ \frac{n(u, s) + \alpha(u, s)}{n(u) + \alpha(u)}, s \in \mathcal{A}, u \in \mathcal{A} \right\}$$

The variance is given by

$$\text{Var}_{\text{post}}p(s|u) = \frac{n(u, s) + \alpha(u, s)}{(n(u) + \alpha(u))^2} \frac{n(u) + \alpha(u) - n(u, s) - \alpha(u, s)}{n(u) + \alpha(u) + 1}$$

The square root of this quantity is the standard error, which is returned by the function.

The confidence intervals are constructed by computing the inverse of the beta integral.

### *Predictive distribution*

Given the old data set, the probability of observing new data is  $P(D'|D)$  where  $D'$  is the new data set. Let  $m(u, s), m(u)$  denote the corresponding counts for the new data. Then,

$$P(D'|D) = \int P(D'|\theta)P(\theta|D)d\theta$$

We already know the expressions for both quantities in the integral and it turns out to be similar to evaluating the evidence

$$P(D'|D) = \prod_{u \in \mathcal{A}} \left\{ \frac{\Gamma(\alpha(u))}{\prod_{s \in \mathcal{A}} \Gamma(\alpha(u, s))} \frac{\prod_{s \in \mathcal{A}} \Gamma(n(u, s) + m(u, s) + \alpha(u, s))}{\Gamma(\alpha(u) + n(u) + m(u))} \right\}$$

### *Choosing the hyperparameters*

The hyperparameters model the shape of the parameters' prior distribution. These must be provided by the user. The package offers functionality to translate a given prior belief transition matrix into the hyperparameter matrix. It is assumed that this belief matrix corresponds to the mean value of the parameters. Since the relation

$$E_{\text{prior}}p(s|u) = \frac{\alpha(u, s)}{\alpha(u)}$$

holds, the function accepts as input the belief matrix as well as a scaling vector (serves as a proxy for  $\alpha(\cdot)$ ) and proceeds to compute  $\alpha(\cdot, \cdot)$ .

Alternatively, the function accepts a data sample and infers the hyperparameters from it. Since the mode of a parameter (with respect to the prior distribution) is proportional to one less than the corresponding hyperparameter, we set

$$\alpha(u, s) - 1 = m(u, s)$$

where  $m(u, s)$  is the  $u \rightarrow s$  transition count in the data sample. This is regarded as a 'fake count' which helps  $\alpha(u, s)$  to reflect knowledge of the data sample.

### *Usage and examples*

```

R> weatherStates <- c("sunny", "cloudy", "rain")
R> byRow <- TRUE
R> weatherMatrix <- matrix(data = c(0.7, 0.2, 0.1,
R+                               0.3, 0.4, 0.3,
R+                               0.2, 0.4, 0.4),
R+                               byrow = byRow, nrow = 3,
R+                               dimnames = list(weatherStates, weatherStates))
R> mcWeather <- new("markovchain", states = weatherStates,
R+                               byrow = byRow, transitionMatrix = weatherMatrix,
R+                               name = "Weather")
R> weathersOfDays <- rmarkovchain(n = 365, object = mcWeather, t0 = "sunny")

```

For the purpose of this section, we shall continue to use the weather of days example introduced in the main vignette of the package (reproduced above for convenience).

Let us invoke the fit function to estimate the MAP parameters with 92% confidence bounds and hyperparameters as shown below, based on the first 200 days of the weather data. Additionally, let us find out what the probability is of observing the weather data for the next 165 days. The usage would be as follows

```

R> hyperMatrix<-matrix(c(1, 1, 2,
R+                       3, 2, 1,
R+                       2, 2, 3),
R+                       nrow = 3, byrow = TRUE,
R+                       dimnames = list(weatherStates,weatherStates))
R> markovchainFit(weathersOfDays[1:200], method = "map",
R+               confidencelevel = 0.92, hyperparam = hyperMatrix)

```

\$estimate

[1,] 0.6308590 0.3839137 0.3349244
[2,] 0.5128115 0.4813020 0.4215969
[3,] 0.3238439 0.1291460 1.0000000

$logLikelihood
[1] -187.6174

R> predictiveDistribution(weathersOfDays[1:200],
R+      weathersOfDays[201:365],hyperparam = hyperMatrix2)

[1] -146.5089

```

Note that the predictive probability is very small. However, this can be useful when comparing model orders. Suppose we have an idea of the (prior) transition matrix corresponding to the expected value of the parameters, and have a data set from which we want to deduce the MAP estimates. We can infer the hyperparameters from this known transition matrix itself, and use this to obtain our MAP estimates.

```
R> inferHyperparam(transMatr = weatherMatrix, scale = c(10, 10, 10))
```

```

$scaledInference
      cloudy rain sunny

```

cloudy	4	3	3
rain	4	4	2
sunny	2	1	7

Alternatively, we can use a data sample to infer the hyperparameters.

```
R> inferHyperparam(data = weathersOfDays[1:15])
```

```
$dataInference
      cloudy rain sunny
cloudy    4    4    2
rain      4    2    2
sunny     2    2    1
```

In order to use the inferred hyperparameter matrices, we do

```
R> hyperMatrix3 <- inferHyperparam(transMatr = weatherMatrix,
R+                               scale = c(10, 10, 10))
R> hyperMatrix3 <- hyperMatrix3$scaledInference
R> hyperMatrix4 <- inferHyperparam(data = weathersOfDays[1:15])
R> hyperMatrix4 <- hyperMatrix4$dataInference
```

Now we can safely use `hyperMatrix3` and `hyperMatrix4` with `markovchainFit` (in the `hyperparam` argument).

Supposing we don't provide any hyperparameters, then the prior is uniform. This is the same as maximum likelihood.

```
R> data(preproglucacon)
R> preproglucacon <- preproglucacon[[2]]
R> MLEest <- markovchainFit(preproglucacon, method = "mle")
R> MAPest <- markovchainFit(preproglucacon, method = "map")
R> MLEest$estimate
```

MLE Fit

## 6. Applications

This section shows applications of DTMC in various fields.

### 6.1. Weather forecasting

Markov chains provide a simple model to predict the next day's weather given the current meteorological condition. The first application herewith shown is the “Land of Oz example” from [J. G. Kemeny, J. L. Snell, and G. L. Thompson \(1974\)](#), the second is the “Alofi Island Rainfall” from [P. J. Avery and D. A. Henderson \(1999\)](#).

#### *Land of Oz*

The Land of Oz is acknowledged not to have ideal weather conditions at all: the weather is snowy or rainy very often and, once more, there are never two nice days in a row. Consider three weather states: rainy, nice and snowy. Let the transition matrix be as in the following:

```
R> mcWP <- new("markovchain", states = c("rainy", "nice", "snowy"),
R+       transitionMatrix = matrix(c(0.5, 0.25, 0.25,
R+                               0.5, 0, 0.5,
R+                               0.25, 0.25, 0.5), byrow = T, nrow = 3))
```

Given that today it is a nice day, the corresponding stochastic row vector is  $w_0 = (0, 1, 0)$  and the forecast after 1, 2 and 3 days are given by

```
R> W0 <- t(as.matrix(c(0, 1, 0)))
R> W1 <- W0 * mcWP; W1
```

```
      rainy nice snowy
[1,]  0.5    0   0.5
```

```
R> W2 <- W0 * (mcWP ^ 2); W2
```

```
      rainy nice snowy
[1,] 0.375 0.25 0.375
```

```
R> W3 <- W0 * (mcWP ^ 3); W3
```

```
      rainy    nice    snowy
[1,] 0.40625 0.1875 0.40625
```

As can be seen from  $w_1$ , if in the Land of Oz today is a nice day, tomorrow it will rain or snow with probability 1. One week later, the prediction can be computed as

```
R> W7 <- W0 * (mcWP ^ 7)
R> W7
```

```
      rainy      nice      snowy
[1,] 0.4000244 0.1999512 0.4000244
```

The steady state of the chain can be computed by means of the `steadyStates` method.

```
R> q <- steadyStates(mcWP)
R> q
```

```
      rainy nice snowy
[1,]   0.4   0.2   0.4
```

Note that, from the seventh day on, the predicted probabilities are substantially equal to the steady state of the chain and they don't depend from the starting point, as the following code shows.

```
R> R0 <- t(as.matrix(c(1, 0, 0)))
R> R7 <- R0 * (mcWP ^ 7); R7
```

```
      rainy      nice      snowy
[1,] 0.4000244 0.2000122 0.3999634
```

```
R> S0 <- t(as.matrix(c(0, 0, 1)))
R> S7 <- S0 * (mcWP ^ 7); S7
```

```
      rainy      nice      snowy
[1,] 0.3999634 0.2000122 0.4000244
```

### *Alofi Island Rainfall*

Alofi Island daily rainfall data were recorded from January 1st, 1987 until December 31st, 1989 and classified into three states: “0” (no rain), “1-5” (from non zero until 5 mm) and “6+” (more than 5mm). The corresponding dataset is provided within the **markovchain** package.

```
R> data("rain", package = "markovchain")
R> table(rain$rain)
```

```

0 1-5 6+
548 295 253

```

The underlying transition matrix is estimated as follows.

```

R> mcAlofi <- markovchainFit(data = rain$rain, name = "Alofi MC")$estimate
R> mcAlofi

```

Alofi MC

A 3 - dimensional discrete Markov Chain defined by the following states:  
0, 1-5, 6+

The transition matrix (by rows) is defined as follows:

```

          0          1-5          6+
0    0.6605839 0.2299270 0.1094891
1-5  0.4625850 0.3061224 0.2312925
6+   0.1976285 0.3122530 0.4901186

```

The long term daily rainfall distribution is obtained by means of the `steadyStates` method.

```

R> steadyStates(mcAlofi)

          0          1-5          6+
[1,] 0.5008871 0.2693656 0.2297473

```

## 6.2. Finance and Economics

Other relevant applications of DTMC can be found in Finance and Economics.

### *Finance*

Credit ratings transitions have been successfully modelled with discrete time Markov chains. Some rating agencies publish transition matrices that show the empirical transition probabilities across credit ratings. The example that follows comes from **CreditMetrics** R package ([Wittmann 2007](#)), carrying Standard & Poor's published data.

```

R> rc <- c("AAA", "AA", "A", "BBB", "BB", "B", "CCC", "D")
R> creditMatrix <- matrix(
R+   c(90.81, 8.33, 0.68, 0.06, 0.08, 0.02, 0.01, 0.01,
R+     0.70, 90.65, 7.79, 0.64, 0.06, 0.13, 0.02, 0.01,
R+     0.09, 2.27, 91.05, 5.52, 0.74, 0.26, 0.01, 0.06,
R+     0.02, 0.33, 5.95, 85.93, 5.30, 1.17, 1.12, 0.18,
R+     0.03, 0.14, 0.67, 7.73, 80.53, 8.84, 1.00, 1.06,
R+     0.01, 0.11, 0.24, 0.43, 6.48, 83.46, 4.07, 5.20,
R+     0.21, 0, 0.22, 1.30, 2.38, 11.24, 64.86, 19.79,
R+     0, 0, 0, 0, 0, 0, 0, 100
R+   )/100, 8, 8, dimnames = list(rc, rc), byrow = TRUE)

```

It is easy to convert such matrices into `markovchain` objects and to perform some analyses

```
R> creditMc <- new("markovchain", transitionMatrix = creditMatrix,
R+           name = "S&P Matrix")
R> absorbingStates(creditMc)

[1] "D"
```

### *Economics*

For a recent application of `markovchain` in Economic, see [Jacob \(2014\)](#).

A dynamic system generates two kinds of economic effects ([Bard 2000](#)):

1. those incurred when the system is in a specified state, and
2. those incurred when the system makes a transition from one state to another.

Let the monetary amount of being in a particular state be represented as a  $m$ -dimensional column vector  $c^S$ , while let the monetary amount of a transition be embodied in a  $C^R$  matrix in which each component specifies the monetary amount of going from state  $i$  to state  $j$  in a single step. Henceforth, Equation (24) represents the monetary of being in state  $i$ .

$$c_i = c_i^S + \sum_{j=1}^m C_{ij}^R p_{ij}. \quad (24)$$

Let  $\bar{c} = [c_i]$  and let  $e_i$  be the vector valued 1 in the initial state and 0 in all other, then, if  $f_n$  is the random variable representing the economic return associated with the stochastic process at time  $n$ , Equation (25) holds:

$$E[f_n(X_n) | X_0 = i] = e_i P^n \bar{c}. \quad (25)$$

The following example assumes that a telephone company models the transition probabilities between customer/non-customer status by matrix  $P$  and the cost associated to states by matrix  $M$ .

```
R> statesNames <- c("customer", "non customer")
R> P <- zeros(2); P[1, 1] <- .9; P[1, 2] <- .1; P[2, 2] <- .95; P[2, 1] <- .05;
R> rownames(P) <- statesNames; colnames(P) <- statesNames
R> mcP <- new("markovchain", transitionMatrix = P, name = "Telephone company")
R> M <- zeros(2); M[1, 1] <- -20; M[1, 2] <- -30; M[2, 1] <- -40; M[2, 2] <- 0
```

If the average revenue for existing customer is +100, the cost per state is computed as follows.

```
R> c1 <- 100 + conditionalDistribution(mcP, state = "customer") %*% M[1,]
R> c2 <- 0 + conditionalDistribution(mcP, state = "non customer") %*% M[2,]
```

For an existing customer, the expected gain (loss) at the fifth year is given by the following code.

```
R> as.numeric((c(1, 0)* mcP ^ 5) %*% (as.vector(c(c1, c2))))

[1] 48.96009
```

### 6.3. Actuarial science

Markov chains are widely applied in the field of actuarial science. Two classical applications are policyholders' distribution across Bonus Malus classes in Motor Third Party Liability (MTPL) insurance (Section 6.3.1) and health insurance pricing and reserving (Section 6.3.2).

#### *MTPL Bonus Malus*

Bonus Malus (BM) contracts grant the policyholder a discount (enworsen) as a function of the number of claims in the experience period. The discount (enworsen) is applied on a premium that already allows for known (a priori) policyholder characteristics (Denuit, Maréchal, Pitrebois, and Walhin 2007) and it usually depends on vehicle, territory, the demographic profile of the policyholder, and policy coverages deep (deductible and policy limits). Since the proposed BM level depends on the claim on the previous period, it can be modelled by a discrete Markov chain. A very simplified example follows. Assume a BM scale from 1 to 5, where 4 is the starting level. The evolution rules are shown in Equation 26:

$$bm_{t+1} = \max(1, bm_t - 1) * (\tilde{N} = 0) + \min(5, bm_t + 2 * \tilde{N}) * (\tilde{N} \geq 1). \quad (26)$$

The number of claim  $\tilde{N}$  is a random variable that is assumed to be Poisson distributed.

```
R> getBonusMalusMarkovChain <- function(lambda) {
R+   bmMatr <- zeros(5)
R+   bmMatr[1, 1] <- dpois(x = 0, lambda)
R+   bmMatr[1, 3] <- dpois(x = 1, lambda)
R+   bmMatr[1, 5] <- 1 - ppois(q = 1, lambda)
R+
R+   bmMatr[2, 1] <- dpois(x = 0, lambda)
R+   bmMatr[2, 4] <- dpois(x = 1, lambda)
R+   bmMatr[2, 5] <- 1 - ppois(q = 1, lambda)
R+
R+   bmMatr[3, 2] <- dpois(x = 0, lambda)
R+   bmMatr[3, 5] <- 1 - dpois(x=0, lambda)
R+
R+   bmMatr[4, 3] <- dpois(x = 0, lambda)
R+   bmMatr[4, 5] <- 1 - dpois(x = 0, lambda)
R+
R+   bmMatr[5, 4] <- dpois(x = 0, lambda)
R+   bmMatr[5, 5] <- 1 - dpois(x = 0, lambda)
```

```

R> stateNames <- as.character(1:5)
R> out <- new("markovchain", transitionMatrix = bmMatr,
R>           states = stateNames, name = "BM Matrix")
R> return(out)
R> }

```

Assuming that the a-priori claim frequency per car-year is 0.05 in the class (being the class the group of policyholders that share the same common characteristics), the underlying BM transition matrix and its underlying steady state are as follows.

```

R> bmMc <- getBonusMalusMarkovChain(0.05)
R> as.numeric(steadyStates(bmMc))

```

```
[1] 0.895836079 0.045930498 0.048285405 0.005969247 0.003978772
```

If the underlying BM coefficients of the class are 0.5, 0.7, 0.9, 1.0, 1.25, this means that the average BM coefficient applied on the long run to the class is given by

```
R> sum(as.numeric(steadyStates(bmMc)) * c(0.5, 0.7, 0.9, 1, 1.25))
```

```
[1] 0.534469
```

This means that the average premium paid by policyholders in the portfolio almost halves in the long run.

### *Health insurance example*

Actuaries quantify the risk inherent in insurance contracts evaluating the premium of insurance contract to be sold (therefore covering future risk) and evaluating the actuarial reserves of existing portfolios (the liabilities in terms of benefits or claims payments due to policyholder arising from previously sold contracts), see [Deshmukh \(2012\)](#) for details.

An applied example can be performed using the data from [De Angelis, Paolo and Di Falco, L. \(2016\)](#) that has been saved in the `exdata` folder.

```

R> ltcDemoPath<-system.file("extdata", "ltdItaData.txt",
R>                           package = "markovchain")
R> ltcDemo<-read.table(file = ltcDemoPath, header=TRUE,
R>                     sep = ";", dec = ".")
R> head(ltcDemo)

```

	age	pAD	pID	pAI	pAA
1	20	0.0004616002	0.01083364	0.0001762467	0.9993622
2	21	0.0004824888	0.01079719	0.0001710577	0.9993465
3	22	0.0004949938	0.01177076	0.0001592333	0.9993458
4	23	0.0005042935	0.01159394	0.0001605731	0.9993351
5	24	0.0005074193	0.01260574	0.0001606504	0.9993319
6	25	0.0005154267	0.01526364	0.0001643603	0.9993202

The data shows the probability of transition between the state of (A)ctive, to (I)ll and Dead. It is easy to complete the transition matrix.

```
R> ltcDemo<-transform(ltcDemo,
R+                      pIA=0,
R+                      pII=1-pID,
R+                      pDD=1,
R+                      pDA=0,
R+                      pDI=0)
```

Now we build a function that returns the transition during the  $t + 1$  th year, assuming that the subject has attained year  $t$ .

```
R> possibleStates<-c("A","I","D")
R> getMc4Age<-function(age) {
R+   transitionsAtAge<-ltcDemo[ltcDemo$age==age,]
R+
R+   myTransMatr<-matrix(0, nrow=3,ncol = 3,
R+                       dimnames = list(possibleStates, possibleStates))
R+   myTransMatr[1,1]<-transitionsAtAge$pAA[1]
R+   myTransMatr[1,2]<-transitionsAtAge$pAI[1]
R+   myTransMatr[1,3]<-transitionsAtAge$pAD[1]
R+   myTransMatr[2,2]<-transitionsAtAge$pII[1]
R+   myTransMatr[2,3]<-transitionsAtAge$pID[1]
R+   myTransMatr[3,3]<-1
R+
R+   myMc<-new("markovchain", transitionMatrix = myTransMatr,
R+             states = possibleStates,
R+             name = paste("Age",age,"transition matrix"))
R+
R+   return(myMc)
R+ }
```

Cause transitions are not homogeneous across ages, we use a `markovchainList` object to describe the transition probabilities for a guy starting at age 100.

```
R> getFullTransitionTable<-function(age){
R+   ageSequence<-seq(from=age, to=120)
R+   k=1
R+   myList=list()
R+   for ( i in ageSequence) {
R+     mc_age_i<-getMc4Age(age = i)
R+     myList[[k]]<-mc_age_i
R+     k=k+1
R+   }
```

```

R+ myMarkovChainList<-new("markovchainList", markovchains = myList,
R+                           name = paste("TransitionsSinceAge", age, sep = ""))
R+ return(myMarkovChainList)
R+ }
R> transitionsSince100<-getFullTransitionTable(age=100)

```

We can use such transition for simulating ten life trajectories for a guy that begins “active” (A) aged 100:

```

R> rmarkovchain(n = 10, object = transitionsSince100,
R+               what = "matrix", t0 = "A", include.t0 = TRUE)

```

[10,]	"D"	"D"	"D"	"D"	"D"	"D"	"D"	"D"	"D"

Lets consider 1000 simulated live trajectories, for a healthy guy aged 80. We can compute the expected time a guy will be disabled starting active at age 80.

```

R> transitionsSince80<-getFullTransitionTable(age=80)
R> lifeTrajectories<-rmarkovchain(n=1e3, object=transitionsSince80,
R+                               what="matrix",t0="A",include.t0=TRUE)
R> temp<-matrix(0,nrow=nrow(lifeTrajectories),ncol = ncol(lifeTrajectories))
R> temp[lifeTrajectories=="I"]<-1
R> expected_period_disabled<-mean(rowSums((temp)))
R> expected_period_disabled

```

```
[1] 1.271
```

Assuming that the health insurance will pay a benefit of 12000 per year disabled and that the real interest rate is 0.02, we can compute the lump sum premium at 80.

```
R> mean(rowMeans(12000*temp%*( matrix((1+0.02)^-seq(from=0, to=ncol(temp)-1))))))
[1] 12672.27
```

## 6.4. Sociology

Markov chains have been actively used to model progressions and regressions between social classes. The first study was performed by [Glass and Hall \(1954\)](#), while a more recent application can be found in [Jo Blanden and Machin \(2005\)](#). The table that follows shows the income quartile of the father when the son was 16 (in 1984) and the income quartile of the son when aged 30 (in 2000) for the 1970 cohort.

```
R> data("blanden")
R> mobilityMc <- as(blanden, "markovchain")
R> mobilityMc
```

Unnamed Markov chain

A 4 - dimensional discrete Markov Chain defined by the following states:

Bottom, 2nd, 3rd, Top

The transition matrix (by rows) is defined as follows:

	2nd	3rd	Bottom	Top
Bottom	0.2900000	0.2200000	0.3800000	0.1100000
2nd	0.2772277	0.2574257	0.2475248	0.2178218
3rd	0.2626263	0.2828283	0.2121212	0.2424242
Top	0.1700000	0.2500000	0.1600000	0.4200000

The underlying transition graph is plotted in [Figure 5](#).

The steady state distribution is computed as follows. Since transition across quartiles are shown, the probability function is evenly 0.25.

```
R> round(steadyStates(mobilityMc), 2)
```

```
      Bottom 2nd 3rd Top
[1,]  0.25 0.25 0.25 0.25
```

## 6.5. Genetics and Medicine

This section contains two examples: the first shows the use of Markov chain models in genetics, the second shows an application of Markov chains in modelling diseases' dynamics.

### *Genetics*

[P. J. Avery and D. A. Henderson \(1999\)](#) discusses the use of Markov chains in model Preproglucacon gene protein bases sequence. The `preproglucacon` dataset in **markovchain** contains the dataset shown in the package.

Figure 5: 1970 UK cohort mobility data.

```
R> data("preproglucacon", package = "markovchain")
```

It is possible to model the transition probabilities between bases as shown in the following code.

```
R> mcProtein <- markovchainFit(preproglucacon$preproglucacon,
R+                               name = "Preproglucacon MC")$estimate
R> mcProtein
```

Preproglucacon MC

A 4 - dimensional discrete Markov Chain defined by the following states:

A, C, G, T

The transition matrix (by rows) is defined as follows:

	A	C	G	T
A	0.3585271	0.1434109	0.16666667	0.3313953
C	0.3840304	0.1558935	0.02281369	0.4372624
G	0.3053097	0.1991150	0.15044248	0.3451327
T	0.2844523	0.1819788	0.17667845	0.3568905

## Medicine

Discrete-time Markov chains are also employed to study the progression of chronic diseases. The following example is taken from [B. A. Craig and A. A. Sendi \(2002\)](#). Starting from six month follow-up data, the maximum likelihood estimation of the monthly transition matrix is obtained. This transition matrix aims to describe the monthly progression of CD4-cell counts of HIV infected subjects.

```

R> craigSendiMatr <- matrix(c(682, 33, 25,
R+      154, 64, 47,
R+      19, 19, 43), byrow = T, nrow = 3)
R> hivStates <- c("0-49", "50-74", "75-UP")
R> rownames(craigSendiMatr) <- hivStates
R> colnames(craigSendiMatr) <- hivStates
R> craigSendiTable <- as.table(craigSendiMatr)
R> mcM6 <- as(craigSendiTable, "markovchain")
R> mcM6@name <- "Zero-Six month CD4 cells transition"
R> mcM6

```

Zero-Six month CD4 cells transition

A 3 - dimensional discrete Markov Chain defined by the following states:

0-49, 50-74, 75-UP

The transition matrix (by rows) is defined as follows:

	0-49	50-74	75-UP
0-49	0.9216216	0.04459459	0.03378378
50-74	0.5811321	0.24150943	0.17735849
75-UP	0.2345679	0.23456790	0.53086420

As shown in the paper, the second passage consists in the decomposition of  $M_6 = V \cdot D \cdot V^{-1}$  in order to obtain  $M_1$  as  $M_1 = V \cdot D^{1/6} \cdot V^{-1}$ .

```

R> eig <- eigen(mcM6@transitionMatrix)
R> D <- diag(eig$values)

```

```

R> V <- eig$vectors
R> V %*% D %*% solve(V)

```

	[,1]	[,2]	[,3]
[1,]	0.9216216	0.04459459	0.03378378
[2,]	0.5811321	0.24150943	0.17735849
[3,]	0.2345679	0.23456790	0.53086420

```

R> d <- D ^ (1/6)
R> M <- V %*% d %*% solve(V)
R> mcM1 <- new("markovchain", transitionMatrix = M, states = hivStates)

```

## 7. Discussion, issues and future plans

The **markovchain** package has been designed in order to provide easily handling of DTMC and communication with alternative packages.

The package has known several improvements in the recent years: many functionalities added, porting the software in Rcpp **Rcpp** package ([Eddelbuettel 2013](#)) and many methodological improvements that have improved the software reliability.

## 8. Acknowledgments

The package was selected for Google Summer of Code 2015 support. The authors wish to thank Michael Cole, Tobi Gutman and Mildenerger Thoralf for their suggestions and bug checks. A final thanks also to Dr. Simona C. Minotti and Dr. Mirko Signorelli for their support in drafting this version of the vignettes.
