# The markovchain Package: A Package for Easily Handling Discrete Markov Chains in R

**Giorgio Alfredo Spedicato, Tae Seung Kang, Sai Bhargav Yalamanchi, Deepak Yadav, Ignacio Cordón**

**Abstract**

The **markovchain** package aims to fill a gap within the R framework providing S4 classes and methods for easily handling discrete time Markov chains, homogeneous and simple inhomogeneous ones as well as continuous time Markov chains. The S4 classes for handling and analysing discrete and continuous time Markov chains are presented, as well as functions and method for performing probabilistic and statistical analysis. Finally, some examples in which the package's functions are applied to Economics, Finance and Natural Sciences topics are shown.

*Keywords*: discrete time Markov chains, continuous time Markov chains, transition matrices, communicating classes, periodicity, first passage time, stationary distributions.

## 1. Introduction

Markov chains represent a class of stochastic processes of great interest for the wide spectrum of practical applications. In particular, discrete time Markov chains (DTMC) permit to model the transition probabilities between discrete states by the aid of matrices.Various R packages deal with models that are based on Markov chains:

- **msm** (Jackson 2011) handles Multi-State Models for panel data.
- **mcmcR** (Geyer and Johnson 2013) implements Monte Carlo Markov Chain approach.
- **hmm** (Himmelmann and www.linhi.com 2010) fits hidden Markov models with covariates.
- **mstate** fits 'Multi-State Models based on Markov chains for survival analysis (de Wreede, Fiocco, and Putter 2011).

Nevertheless, the R statistical environment (R Core Team 2013) seems to lack a simple package that coherently defines S4 classes for discrete Markov chains and allows to perform probabilistic analysis, statistical inference and applications. For the sake of completeness, **markovchain** is the second package specifically dedicated to DTMC analysis, being **DTMCPack** (Nicholson 2013) the first one. Notwithstanding, **markovchain** package (Spedicato 2017) aims to offer more flexibility in handling DTMC than other existing solutions, providing S4 classes for both homogeneous and non-homogeneous Markov chains as well as methods suited to perform statistical and probabilistic analysis.

The **markovchain** package depends on the following R packages: **expm** (Goulet, Dutang, Maechler, Firth, Shapira, Stadelmann, and expm-developers@lists.R-forge.R-project.org 2013) to perform efficient matrices powers; **igraph** (Csardi and Nepusz 2006) to perform pretty plotting of `markovchain` objects and **matlab** (Roebuck 2011), that contains functions for matrix management and calculations that emulate those within MATLAB environment. Moreover, other scientific softwares provide functions specifically designed to analyze DTMC, as Mathematica 9 (Wolfram Research 2013b).

The paper is structured as follows: Section 2 briefly reviews mathematics and definitions regarding DTMC, Section 3 discusses how to handle and manage Markov chain objects within the package, Section 4 and Section 5 show how to perform probabilistic and statistical modelling, while Section 6 presents some applied examples from various fields analyzed by means of the **markovchain** package.

# 2. Review of core mathematical concepts

## 2.1. General Definitions

A DTMC is a sequence of random variables $X_1,\, X_2\,, \ldots,\, X_n, \ldots$ characterized by the Markov property (also known as memoryless property, see Equation 1). The Markov property states that the distribution of the forthcoming state $X_{n+1}$ depends only on the current state $X_n$ and doesn't depend on the previous ones $X_{n-1},\, X_{n-2}, \ldots,\, X_1$.

$$Pr\left(X_{n+1}=x_{n+1}\left|X_1=x_1, X_2=x_{2,\ldots}, X_n=x_n\right.\right)=Pr\left(X_{n+1}=x_{n+1}\left|X_n=x_n\right.\right). \tag{1}$$

The set of possible states $S=\{s_1, s_2, ..., s_r\}$ of $X_n$ can be finite or countable and it is named the state space of the chain.

The chain moves from one state to another (this change is named either 'transition' or 'step') and the probability $p_{ij}$ to move from state $s_i$ to state $s_j$ in one step is named transition probability:

$$p_{ij}=Pr\left(X_1=s_j\left|X_0=s_i\right.\right). \tag{2}$$

The probability of moving from state $i$ to $j$ in $n$ steps is denoted by $p_{ij}^{(n)}=Pr\left(X_n=s_j\left|X_0=s_i\right.\right)$.

A DTMC is called time-homogeneous if the property shown in Equation 3 holds. Time homogeneity implies no change in the underlying transition probabilities as time goes on.

$$Pr\left(X_{n+1}=s_j\left|X_n=s_i\right.\right)=Pr\left(X_n=s_j\left|X_{n-1}=s_i\right.\right). \tag{3}$$

If the Markov chain is time-homogeneous, then $p_{ij}=Pr\left(X_{k+1}=s_j\left|X_k=s_i\right.\right)$ and $p_{ij}^{(n)}=Pr\left(X_{n+k}=s_j\left|X_k=s_i\right.\right)$, where $k>0$.

The probability distribution of transitions from one state to another can be represented into a transition matrix $P=(p_{ij})_{i,j}$, where each element of position $(i,j)$ represents the transition probability $p_{ij}$. E.g., if $r=3$ the transition matrix $P$ is shown in Equation 4

$$P=\left[\begin{array}{ccc} p_{11} & p_{12} & p_{13}\\ p_{21} & p_{22} & p_{23}\\ p_{31} & p_{32} & p_{33} \end{array}\right]. \tag{4}$$

The distribution over the states can be written in the form of a stochastic row vector $x$ (the term stochastic means that $\sum_i x_i = 1, x_i \geq 0$): e.g., if the current state of $x$ is $s_2$, $x = (0\,1\,0)$. As a consequence, the relation between $x^{(1)}$ and $x^{(0)}$ is $x^{(1)} = x^{(0)}P$ and, recursively, we get $x^{(2)} = x^{(0)}P^2$ and $x^{(n)} = x^{(0)}P^n$, $n > 0$.

DTMC are explained in most theory books on stochastic processes, see Brémaud (1999) and Dobrow (2016) for example. Valuable references online available are: Konstantopoulos (2009), Snell (1999) and Bard (2000).

## 2.2. Properties and classification of states

A state $s_j$ is said accessible from state $s_i$ (written $s_i \rightarrow s_j$) if a system starting in state $s_i$ has a positive probability to reach the state $s_j$ at a certain point, i.e., $\exists n > 0 : p_{ij}^n > 0$. If both $s_i \rightarrow s_j$ and $s_j \rightarrow s_i$, then $s_i$ and $s_j$ are said to communicate.

A communicating class is defined to be a set of states that communicate. A DTMC can be composed by one or more communicating classes. If the DTMC is composed by only one communicating class (i.e., if all states in the chain communicate), then it is said irreducible. A communicating class is said to be closed if no states outside of the class can be reached from any state inside it.

If $p_{ii} = 1$, $s_i$ is defined as absorbing state: an absorbing state corresponds to a closed communicating class composed by one state only.

The canonical form of a DTMC transition matrix is a matrix having a block form, where the closed communicating classes are shown at the beginning of the diagonal matrix.

A state $s_i$ has period $k_i$ if any return to state $s_i$ must occur in multiplies of $k_i$ steps, that is $k_i = gcd\left\{n : Pr\left(X_n = s_i \left| X_0 = s_i\right.\right) > 0\right\}$, where $gcd$ is the greatest common divisor. If $k_i = 1$ the state $s_i$ is said to be aperiodic, else if $k_i > 1$ the state $s_i$ is periodic with period $k_i$. Loosely speaking, $s_i$ is periodic if it can only return to itself after a fixed number of transitions $k_i > 1$ (or multiple of $k_i$), else it is aperiodic.

If states $s_i$ and $s_j$ belong to the same communicating class, then they have the same period $k_i$. As a consequence, each of the states of an irreducible DTMC share the same periodicity. This periodicity is also considered the DTMC periodicity. It is possible to classify states according to their periodicity. Let $T^{x \rightarrow x}$ is the number of periods to go back to state $x$ knowing that the chain starts in $x$.

- A state $x$ is recurrent if $P(T^{x \rightarrow x} < +\infty) = 1$ (equivalently $P(T^{x \rightarrow x} = +\infty) = 0$). In addition:
  1. A state $x$ is null recurrent if in addition $E(T^{x \rightarrow x}) = +\infty$.
  2. A state $x$ is positive recurrent if in addition $E(T^{x \rightarrow x}) < +\infty$.
  3. A state $x$ is absorbing if in addition $P(T^{x \rightarrow x} = 1) = 1$.
- A state $x$ is transient if $P(T^{x \rightarrow x} < +\infty) < 1$ (equivalently $P(T^{x \rightarrow x} = +\infty) > 0$).

It is possible to analyze the timing to reach a certain state. The first passage time (or hitting time) from state $s_i$ to state $s_j$ is the number $T_{ij}$ of steps taken by the chain until it arrives for the first time to state $s_j$, given that $X_0 = s_i$. The probability distribution of $T_{ij}$ is defined by Equation 5

$$h_{ij}{}^{(n)} = Pr\left(T_{ij} = n\right) = Pr\left(X_n = s_j, X_{n-1} \neq s_j, \ldots, X_1 \neq s_j | X_0 = s_i\right) \tag{5}$$

and can be found recursively using Equation 6, given that $h_{ij}{}^{(n)} = p_{ij}$.

$$h_{ij}{}^{(n)} = \sum_{k \in S - \{s_j\}} p_{ik} h_{kj}{}^{(n-1)}. \tag{6}$$

A commonly used quantity related to $h$ is its average value, i.e. the *mean first passage time* (also expected hitting time), namely $\bar{h}_{ij} = \sum_{n=1\ldots\infty} n\, h_{ij}^{(n)}$.

If in the definition of the first passage time we let $s_i = s_j$, we obtain the first recurrence time $T_i = \inf\{n \geq 1 : X_n = s_i | X_0 = s_i\}$. We could also ask ourselves which is the *mean recurrence time*, an average of the mean first recurrence times:

$$r_i = \sum_{k=1}^{\infty} k \cdot P(T_i = k)$$

Revisiting the definition of recurrence and transience: a state $s_i$ is said to be recurrent if it is visited infinitely often, i.e., $Pr(T_i < +\infty | X_0 = s_i) = 1$. On the opposite, $s_i$ is called transient if there is a positive probability that the chain will never return to $s_i$, i.e., $Pr(T_i = +\infty | X_0 = s_i) > 0$.

Given a time homogeneous Markov chain with transition matrix $P$, a stationary distribution $z$ is a stochastic row vector such that $z = z \cdot P$, where $0 \leq z_j \leq 1 \, \forall j$ and $\sum_j z_j = 1$.

If a DTMC $\{X_n\}$ is irreducible and aperiodic, then it has a limit distribution and this distribution is stationary. As a consequence, if $P$ is the $k \times k$ transition matrix of the chain and $z = (z_1, ..., z_k)$ is the unique eigenvector of $P$ such that $\sum_{i=1}^{k} z_i = 1$, then we get

$$\underset{n \to \infty}{lim} P^n = Z, \tag{7}$$

where $Z$ is the matrix having all rows equal to $z$. The stationary distribution of $\{X_n\}$ is represented by $z$.

A matrix $A$ is called primitive if all of its entries are strictly positive, and we write it $A > 0$. If the transition matrix $P$ for a DTMC has some primitive power, i.e. it exists $m > 0 : P^m > 0$, then the DTMC is said to be regular. In fact being regular is equivalent to being irreducible and aperiodic. All regular DTMCs are irreducible. The counterpart is not true.

Given two absorbing states $s_A$ (source) and $s_B$ (sink), the *committor probability* $q_j^{(AB)}$ is the probability that a process starting in state $s_i$ is absorbed in state $s_B$ (rather than $s_A$) (Noé, Schütte, Vanden-Eijnden, Reich, and Weikl 2009). It can be computed via

$$q_j^{(AB)} = \sum_{k \ni A,B} P_{jk} q_k^{(AB)} \quad \text{with} \quad q_A^{(AB)} = 0 \quad \text{and} \quad q_B^{(AB)} = 1 \tag{8}$$

Note we can also define the hitting probability from $i$ to $j$ as the probability of ever reaching the state $j$ if our initial state is $i$:

$$h_{i,j} = Pr(T_{ij} < \infty) = \sum_{n=0}^{\infty} h_{ij}^{(n)} \tag{9}$$

In a DTMC with finite set of states, we know that a transient state communicates at least with one recurrent state. If the chain starts in a transient element, once it hits a recurrent state, it is going to be caught in its recurrent state, and we cannot expect it would go back to the initial state. Given a transient state $i$ we can define the *absorption probability* to the recurrent state $j$ as the probability that the first recurrent state that the Markov chain visits (and therefore gets absorbed by its recurrent class) is $j$, $f_i^* j$. We can also define the *mean absorption time* as the mean number of steps the transient state $i$ would take until it hits any recurrent state, $b_i$.

## 2.3. A short example

Consider the following numerical example. Suppose we have a DTMC with a set of 3 possible states $S = \{s_1, s_2, s_3\}$. Let the transition matrix be:

$$P = \begin{bmatrix} 0.5 & 0.2 & 0.3 \\ 0.15 & 0.45 & 0.4 \\ 0.25 & 0.35 & 0.4 \end{bmatrix}. \tag{10}$$

In $P$, $p_{11} = 0.5$ is the probability that $X_1 = s_1$ given that we observed $X_0 = s_1$ is 0.5, and so on.It is easy to see that the chain is irreducible since all the states communicate (it is made by one communicating class only).

Suppose that the current state of the chain is $X_0 = s_2$, i.e., $x^{(0)} = (0\,1\,0)$, then the probability distribution of states after 1 and 2 steps can be computed as shown in Equations (11) and (12).

$$x^{(1)} = (0\;1\;0) \begin{bmatrix} 0.5 & 0.2 & 0.3 \\ 0.15 & 0.45 & 0.4 \\ 0.25 & 0.35 & 0.4 \end{bmatrix} = (0.15\;0.45\;0.4)\,. \tag{11}$$

$$x^{(n)} = x^{(n-1)} P \to (0.15\;0.45\;0.4) \begin{bmatrix} 0.5 & 0.2 & 0.3 \\ 0.15 & 0.45 & 0.4 \\ 0.25 & 0.35 & 0.4 \end{bmatrix} = (0.2425\;0.3725\;0.385)\,. \tag{12}$$

If we were interested in the probability of being in the state $s_3$ in the second step, then $Pr\left(X_2 = s_3 \,|X_0 = s_2\right) = 0.385$.

# 3. The structure of the package

## 3.1. Creating markovchain objects

The package is loaded within the R command line as follows:

```
R> library("markovchain")
```

```
Loading required package: matlab

Attaching package: 'matlab'

The following object is masked from 'package:stats':

    reshape

The following objects are masked from 'package:utils':

    find, fix

The following object is masked from 'package:base':

    sum
```

The `markovchain` and `markovchainList` S4 classes (Chambers 2008) are defined within the **markovchain** package as displayed:

```
Class "markovchain" [package "markovchain"]

Slots:

Name:            states            byrow transitionMatrix             name
Class:        character          logical           matrix        character

Class "markovchainList" [package "markovchain"]

Slots:

Name:  markovchains         name
Class:         list    character
```

The first class has been designed to handle homogeneous Markov chain processes, while the latter (which is itself a list of `markovchain` objects) has been designed to handle non-homogeneous Markov chains processes.

Any element of `markovchain` class is comprised by following slots:

1. `states`: a character vector, listing the states for which transition probabilities are defined.
2. `byrow`: a logical element, indicating whether transition probabilities are shown by row or by column.
3. `transitionMatrix`: the probabilities of the transition matrix.
4. `name`: optional character element to name the DTMC.

The `markovchainList` objects are defined by following slots:

1. `markovchains`: a list of `markovchain` objects.
2. `name`: optional character element to name the DTMC.

The `markovchain` objects can be created either in a long way, as the following code shows

```
R> weatherStates <- c("sunny", "cloudy", "rain")
R> byRow <- TRUE
R> weatherMatrix <- matrix(data = c(0.70, 0.2, 0.1,
R+                         0.3, 0.4, 0.3,
R+                         0.2, 0.45, 0.35), byrow = byRow, nrow = 3,
R+                       dimnames = list(weatherStates, weatherStates))
R> mcWeather <- new("markovchain", states = weatherStates, byrow = byRow,
R+                 transitionMatrix = weatherMatrix, name = "Weather")
```

or in a shorter way, displayed below

```
R> mcWeather <- new("markovchain", states = c("sunny", "cloudy", "rain"),
R+                   transitionMatrix = matrix(data = c(0.70, 0.2, 0.1,
R+                         0.3, 0.4, 0.3,
R+                         0.2, 0.45, 0.35), byrow = byRow, nrow = 3),
R+                   name = "Weather")
```

When `new("markovchain")` is called alone, a default Markov chain is created.

```
R> defaultMc <- new("markovchain")
```

The quicker way to create `markovchain` objects is made possible thanks to the implemented `initialize` S4 method that checks that:

- the `transitionMatrix` to be a transition matrix, i.e., all entries to be probabilities and either all rows or all columns to sum up to one.
- the columns and rows names of `transitionMatrix` to be defined and to coincide with `states` vector slot.

The `markovchain` objects can be collected in a list within `markovchainList` S4 objects as following example shows.

```
R> mcList <- new("markovchainList", markovchains = list(mcWeather, defaultMc),
R+                 name = "A list of Markov chains")
```

### 3.2. Handling markovchain objects

Table 1 lists which methods handle and manipulate `markovchain` objects.

| Method | Purpose |
|---|---|
| `*` | Direct multiplication for transition matrices. |
| `^` | Compute the power `markovchain` of a given one. |
| `[` | Direct access to the elements of the transition matrix. |
| `==` | Equality operator between two transition matrices. |
| `!=` | Inequality operator between two transition matrices. |
| `as` | Operator to convert `markovchain` objects into `data.frame` and `table` object. |
| `dim` | Dimension of the transition matrix. |
| `names` | Equal to `states`. |
| `names<-` | Change the `states` name. |
| `name` | Get the name of `markovchain object`. |
| `name<-` | Change the name of `markovchain object`. |
| `plot` | `plot` method for `markovchain` objects. |
| `print` | `print` method for `markovchain` objects. |
| `show` | `show` method for `markovchain` objects. |
| `sort` | `sort` method for `markovchain` objects, in terms of their states. |
| `states` | Name of the transition states. |
| `t` | Transposition operator (which switches `byrow` ‘slot value and modifies the transition matrix coherently). |

Table 1: **markovchain** methods for handling `markovchain` objects.

The examples that follow shows how operations on `markovchain` objects can be easily performed. For example, using the previously defined matrix we can find what is the probability distribution of expected weather states in two and seven days, given the actual state to be cloudy.

```
R> initialState <- c(0, 1, 0)
R> after2Days <- initialState * (mcWeather * mcWeather)
R> after7Days <- initialState * (mcWeather ^ 7)
R> after2Days

     sunny cloudy  rain
[1,]  0.39  0.355 0.255

R> round(after7Days, 3)

     sunny cloudy  rain
[1,] 0.462  0.319 0.219
```

A similar answer could have been obtained defining the vector of probabilities as a column vector. A column - defined probability matrix could be set up either creating a new matrix or transposing an existing `markovchain` object thanks to the `t` method.

```
R> initialState <- c(0, 1, 0)
R> after2Days <- (t(mcWeather) * t(mcWeather)) * initialState
R> after7Days <- (t(mcWeather) ^ 7) * initialState
R> after2Days

        [,1]
sunny  0.390
cloudy 0.355
rain   0.255

R> round(after7Days, 3)

        [,1]
sunny  0.462
cloudy 0.319
rain   0.219
```

The initial state vector previously shown can not necessarily be a probability vector, as the code that follows shows:

```
R> fvals<-function(mchain,initialstate,n) {
R+   out<-data.frame()
R+   names(initialstate)<-names(mchain)
R+   for (i in 0:n)
R+   {
R+     iteration<-initialstate*mchain^(i)
R+     out<-rbind(out,iteration)
R+   }
R+   out<-cbind(out, i=seq(0,n))
R+   out<-out[,c(4,1:3)]
R+   return(out)
R+ }
R> fvals(mchain=mcWeather,initialstate=c(90,5,5),n=4)

  i    sunny   cloudy     rain
1 0 90.00000  5.00000  5.00000
2 1 65.50000 22.25000 12.25000
3 2 54.97500 27.51250 17.51250
4 3 50.23875 29.88063 19.88062
5 4 48.10744 30.94628 20.94628
```

Basic methods have been defined for `markovchain` objects to quickly get states and transition matrix dimension.

```
R> states(mcWeather)
```

```
[1] "sunny"  "cloudy" "rain"
```

```
R> names(mcWeather)
```

```
[1] "sunny"  "cloudy" "rain"
```

```
R> dim(mcWeather)
```

```
[1] 3
```

Methods are available to set and get the name of `markovchain` object.

```
R> name(mcWeather)
```

```
[1] "Weather"
```

```
R> name(mcWeather) <- "New Name"
R> name(mcWeather)
```

```
[1] "New Name"
```

Also it is possible to alphabetically sort the transition matrix:

```
R> markovchain:::sort(mcWeather)
```

```
New Name
 A  3 - dimensional discrete Markov Chain defined by the following states:
 cloudy, rain, sunny
 The transition matrix  (by rows)  is defined as follows:
       cloudy rain sunny
cloudy   0.40 0.30   0.3
rain     0.45 0.35   0.2
sunny    0.20 0.10   0.7
```

A direct access to transition probabilities is provided both by `transitionProbability` method and `"["` method.

```
R> transitionProbability(mcWeather, "cloudy", "rain")
```

```
[1] 0.3
```

```
R> mcWeather[2,3]
```

```
[1] 0.3
```

The transition matrix of a `markovchain` object can be displayed using `print` or `show` methods (the latter being less verbose). Similarly, the underlying transition probability diagram can be plotted by the use of `plot` method (as shown in Figure 1) which is based on **igraph** package (Csardi and Nepusz 2006). `plot` method for `markovchain` objects is a wrapper of `plot.igraph` for `igraph` S4 objects defined within the **igraph** package. Additional parameters can be passed to `plot` function to control the network graph layout. There are also **diagram** and **DiagrammeR** ways available for plotting as shown in Figure 2. The `plot` function also uses `communicatingClasses` function to separate out states of different communicating classes. All states that belong to one class have same color.

```
R> print(mcWeather)

       sunny cloudy rain
sunny    0.7   0.20 0.10
cloudy   0.3   0.40 0.30
rain     0.2   0.45 0.35
```

```
R> show(mcWeather)

New Name
 A  3 - dimensional discrete Markov Chain defined by the following states:
 sunny, cloudy, rain
 The transition matrix  (by rows)  is defined as follows:
       sunny cloudy rain
sunny    0.7   0.20 0.10
cloudy   0.3   0.40 0.30
rain     0.2   0.45 0.35

Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 0, 1, 2
 The transition matrix  (by rows)  is defined as follows:
          0         1         2
0 0.0000000 0.5000000 0.5000000
1 0.5000000 0.0000000 0.5000000
2 0.3333333 0.3333333 0.3333333
```

Coerce from `matrix` method, as the code below shows, represents another approach to create a `markovchain` method starting from a given squared probability matrix.

```
R> myMatr<-matrix(c(.1,.8,.1,.2,.6,.2,.3,.4,.3), byrow=TRUE, ncol=3)
```

```
R> myMc<-as(myMatr, "markovchain")
R> myMc

Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 s1, s2, s3
 The transition matrix  (by rows)  is defined as follows:
   s1  s2  s3
s1 0.1 0.8 0.1
s2 0.2 0.6 0.2
s3 0.3 0.4 0.3
```

Non-homogeneous Markov chains can be created with the aid of `markovchainList` object. The example that follows arises from health insurance, where the costs associated to patients in a Continuous Care Health Community (CCHC) are modeled by a non-homogeneous Markov Chain, since the transition probabilities change by year. Methods explicitly written for `markovchainList` objects are: `print`, `show`, `dim` and `[`.

```
R> stateNames = c("H", "I", "D")
R> Q0 <- new("markovchain", states = stateNames,
R+         transitionMatrix =matrix(c(0.7, 0.2, 0.1,0.1, 0.6, 0.3,0, 0, 1),
R+         byrow = TRUE, nrow = 3), name = "state t0")
R> Q1 <- new("markovchain", states = stateNames,
R+         transitionMatrix = matrix(c(0.5, 0.3, 0.2,0, 0.4, 0.6,0, 0, 1),
R+         byrow = TRUE, nrow = 3), name = "state t1")
R> Q2 <- new("markovchain", states = stateNames,
R+         transitionMatrix = matrix(c(0.3, 0.2, 0.5,0, 0.2, 0.8,0, 0, 1),
R+         byrow = TRUE,nrow = 3), name = "state t2")
R> Q3 <- new("markovchain", states = stateNames,
R+           transitionMatrix = matrix(c(0, 0, 1, 0, 0, 1, 0, 0, 1),
R+         byrow = TRUE, nrow = 3), name = "state t3")
R> mcCCRC <- new("markovchainList",markovchains = list(Q0,Q1,Q2,Q3),
R+       name = "Continuous Care Health Community")
R> print(mcCCRC)

The `markovchain` package contains some data found in the literature related to DTMC models (see Section 6. Table 2 lists datasets and tables included within the current release of the package.

| Dataset | Description |
|---|---|
| `blanden` | Mobility across income quartiles, Jo Blanden and Machin (2005). |
| `craigsendi` | CD4 cells, B. A. Craig and A. A. Sendi (2002). |
| `kullback` | raw transition matrices for testing homogeneity, Kullback, Kupperman, and Ku (1962). |
| `preproglucacon` | Preproglucacon DNA basis, P. J. Avery and D. A. Henderson (1999). |
| `rain` | Alofi Island rains, P. J. Avery and D. A. Henderson (1999). |
| `holson` | Individual states trajectories. |
| `sales` | Sales of six beverages in Hong Kong Ching, Ng, and Fung (2008). |

Table 2: The **markovchain** `data.frame` and `table`.

Finally, Table 3 lists the demos included in the demo directory of the package.

| R Code File | Description |
|---|---|
| `bard.R` | Structural analysis of Markov chains from Bard PPT. |
| `examples.R` | Notable Markov chains, e.g., The Gambler Ruin chain. |
| `quickStart.R` | Generic examples. |
| `extractMatrices.R` | Generic examples. |

Table 3: The **markovchain** demos.

# 4. Probability with markovchain objects

The **markovchain** package contains functions to analyse DTMC from a probabilistic perspective. For example, the package provides methods to find stationary distributions and identifying absorbing and transient states. Many of these methods come from MATLAB listings that have been ported into R. For a full description of the underlying theory and algorithm the interested reader can overview the original MATLAB listings, Feres (2007) and Montgomery (2009).

Table 4 shows methods that can be applied on `markovchain` objects to perform probabilistic analysis.

## 4.1. Conditional distributions

The conditional distribution of weather states, given that current day's weather is sunny, is given by following code.

```
R> conditionalDistribution(mcWeather, "sunny")

sunny cloudy   rain
  0.7    0.2    0.1
```

| Method | Returns |
|---|---|
| `absorbingStates` | the absorbing states of the transition matrix, if any. |
| `steadyStates` | the vector(s) of steady state(s) in matrix form. |
| `meanFirstPassageTime` | matrix or vector of mean first passage times. |
| `meanRecurrenceTime` | vector of mean number of steps to return to each recurrent state |
| `hittingProbabilities` | matrix of hitting probabilities for a Markov chain. |
| `meanAbsorptionTime` | expected number of steps for a transient state to be absorbed by any recurrent class |
| `absorptionProbabilities` | probabilities of transient states of being absorbed by each recurrent state |
| `committorAB` | committor probabilities |
| `communicatingClasses` | list of communicating classes. |
| | $s_j$, given actual state $s_i$. |
| `canonicForm` | the transition matrix into canonic form. |
| `is.accessible` | checks whether a state j is reachable from state i. |
| `is.irreducible` | checks whether a DTMC is irreducible. |
| `is.regular` | checks whether a DTMC is regular. |
| `period` | the period of an irreducible DTMC. |
| `recurrentClasses` | list of recurrent communicating classes. |
| `transientClasses` | list of transient communicating classes. |
| `recurrentStates` | the recurrent states of the transition matrix. |
| `transientStates` | the transient states of the transition matrix, if any. |
| `summary` | DTMC summary. |

Table 4: **markovchain** methods: statistical operations.

### 4.2. Stationary states

A stationary (steady state, or equilibrium) vector is a probability vector such that Equation 13 holds

$$\begin{matrix} 0 \leq \pi_j \leq 1 \\ \sum_{j \in S} \pi_j = 1 \\ \pi \cdot P = \pi \end{matrix} \tag{13}$$

Steady states are associated to $P$ eigenvalues equal to one. We could be tempted to compute them solving the eigen values / vectors of the matrix and taking real parts (since if $u + iv$ is a eigen vector, for the matrix $P$, then $Re(u + iv) = u$ and $Im(u + iv) = v$ are eigen vectors) and normalizing by the vector sum, this carries some concerns:

1. If $u, v \in \mathbb{R}^n$ are linearly independent eigen vectors associated to 1 eigen value, $u + iv$, $u + iu$ are also linearly independent eigen vectors, and their real parts coincide. Clearly if we took real parts, we would be loosing an eigen vector, because we cannot know in advance if the underlying algorithm to compute the eigen vectors is going to output something similar to what we described. We should be agnostic to the underlying eigen vector computation algorithm.

2. Imagine the identity $P$ of dimensions $2 \times 2$. Its eigen vectors associated to the 1 eigen

value are $u = (1, 0)$ and $v = (0, 1)$. However, the underlying algorithm to compute eigen vectors could return $(1, -2)$ and $(-2, 1)$ instead, that are linear combinations of the aforementioned ones, and therefore eigen vectors. Normalizing by their sum, we would get: $(-1, 2)$ and $(2, -1)$, which obviously are not probability measures. Again, we should be agnostic to the underlying eigen computation algorithm.

3. Algorithms to compute eigen values / vectors are computationally expensive: they are iterative, and we cannot predict a fixed number of iterations for them. Moreover, each iteration takes $\mathcal{O}(m^2)$ or $\mathcal{O}(m^3)$ algorithmic complexity, with $m$ the number of states.

We are going to use that every irreducible DTMC has a unique steady state, that is, if $M$ is the matrix for an irreducible DTMC (all states communicate with each other), then it exists a unique $v \in \mathbb{R}^m$ such that:

$$v \cdot M = v, \qquad \sum_{i=1}^{m} v_i = 1$$

Also, we'll use that a steady state for a DTMC assigns 0 to the transient states. The canonical form of a (by row) stochastic matrix looks alike:

$$\left(\begin{array}{c|c|c|c|c} M_1 & 0 & 0 & \ldots & 0 \\ \hline 0 & M_2 & 0 & \ldots & 0 \\ \hline 0 & 0 & M_3 & \ldots & 0 \\ \hline \vdots & \vdots & \vdots & \ddots & \vdots \\ \hline A_1 & A_2 & A_3 & \ldots & R \end{array}\right)$$

where $M_i$ corresponds to irreducible sub-chains, the blocks $A_i$ correspond to the transitions from transient states to each of the recurrent classes and $R$ are the transitions from the transient states to themselves.

Also, we should note that a Markov chain has exactly the same name of steady states as recurrent classes. Therefore, we have coded the following algorithm [1]:

1. Identify the recurrent classes $[C_1, \ldots, C_l]$ with `recurrentClasses` function.
2. Take each class $C_i$, compute the sub-matrix corresponding to it $M_i$.
3. Solve the system $v \cdot C_i = v$, $\sum_{j=1}^{|C_i|} v_j = 1$ which has a unique solution, for each $i = 1, \ldots, l$.
4. Map each state $v_i$ to the original order in $P$ and assign a 0 to the slots corresponding to transient states in the matrix.

The result is returned in matrix form.

```
R> steadyStates(mcWeather)
```

[1] We would like to thank Prof. Christophe Dutang for his contributions to the development of this method. He coded a first improvement of the original `steadyStates` method and we could not have reached the current correctness without his previous work

```
         sunny    cloudy      rain
[1,] 0.4636364 0.3181818 0.2181818
```

It is possible for a Markov chain to have more than one stationary distribution, as the gambler ruin example shows.

```
R> gamblerRuinMarkovChain <- function(moneyMax, prob = 0.5) {
R+   m <- matlab::zeros(moneyMax + 1)
R+   m[1,1] <- m[moneyMax + 1,moneyMax + 1] <- 1
R+   states <- as.character(0:moneyMax)
R+   rownames(m) <- colnames(m) <- states
R+
R+   for(i in 2:moneyMax){
R+     m[i,i-1] <- 1 - prob
R+     m[i, i + 1] <- prob
R+   }
R+
R+   new("markovchain", transitionMatrix = m,
R+       name = paste("Gambler ruin", moneyMax, "dim", sep = " "))
R+ }
R>
R> mcGR4 <- gamblerRuinMarkovChain(moneyMax = 4, prob = 0.5)
R> steadyStates(mcGR4)
```

```
     0 1 2 3 4
[1,] 0 0 0 0 1
[2,] 1 0 0 0 0
```

## 4.3. Classification of states

Absorbing states are determined by means of `absorbingStates` method.

```
R> absorbingStates(mcGR4)
```

```
[1] "0" "4"
```

```
R> absorbingStates(mcWeather)
```

```
character(0)
```

The key function in methods which need knowledge about communicating classes, recurrent states, transient states, is `.commclassKernel`, which is a modification of Tarjan's algorithm from Tarjan (1972). This `.commclassKernel` method gets a transition matrix of dimension $n$ and returns a list of two items:

1. `classes`, an matrix whose $(i, j)$ entry is `true` if $s_i$ and $s_j$ are in the same communicating class.

2. `closed`, a vector whose $i$ -th entry indicates whether the communicating class to which $i$ belongs is closed.

These functions are used by two other internal functions on which the `summary` method for `markovchain` objects works.

The example matrix used in Feres (2007) well exemplifies the purpose of the function.

```
R> P <- matlab::zeros(10)
R> P[1, c(1, 3)] <- 1/2;
R> P[2, 2] <- 1/3; P[2,7] <- 2/3;
R> P[3, 1] <- 1;
R> P[4, 5] <- 1;
R> P[5, c(4, 5, 9)] <- 1/3;
R> P[6, 6] <- 1;
R> P[7, 7] <- 1/4; P[7,9] <- 3/4;
R> P[8, c(3, 4, 8, 10)] <- 1/4;
R> P[9, 2] <- 1;
R> P[10, c(2, 5, 10)] <- 1/3;
R> rownames(P) <- letters[1:10]
R> colnames(P) <- letters[1:10]
R> probMc <- new("markovchain", transitionMatrix = P,
R+               name = "Probability MC")
R> summary(probMc)
```

```
Probability MC  Markov chain that is composed by:
Closed classes:
a c
b g i
f
Recurrent classes:
{a,c},{b,g,i},{f}
Transient classes:
{d,e},{h},{j}
The Markov chain is not irreducible
The absorbing states are: f
```

All states that pertain to a transient class are named "transient" and a specific method has been written to elicit them.

```
R> transientStates(probMc)
```

```
[1] "d" "e" "h" "j"
```

`canonicForm` method that turns a Markov chain into its canonic form, reordering the states to have first the recurrent classes and then the transient states.

```
R> probMcCanonic <- canonicForm(probMc)
R> probMc

Probability MC

d 0.0 0.00 0.0000000 0.0000000 0.0000000 0 0.0000000 1.0000000 0.00 0.0000000
e 0.0 0.00 0.0000000 0.0000000 0.3333333 0 0.3333333 0.3333333 0.00 0.0000000
h 0.0 0.25 0.0000000 0.0000000 0.0000000 0 0.2500000 0.0000000 0.25 0.2500000
j 0.0 0.00 0.3333333 0.0000000 0.0000000 0 0.0000000 0.3333333 0.00 0.3333333
```

The function `is.accessible` permits to investigate whether a state $s_j$ is accessible from state $s_i$, that is whether the probability to eventually reach $s_j$ starting from $s_i$ is greater than zero.

```
R> is.accessible(object = probMc, from = "a", to = "c")

[1] TRUE

R> is.accessible(object = probMc, from = "g", to = "c")

[1] FALSE
```

In Section 2.2 we observed that, if a DTMC is irreducible, all its states share the same periodicity. Then, the `period` function returns the periodicity of the DTMC, provided that it is irreducible. The example that follows shows how to find if a DTMC is reducible or irreducible by means of the function `is.irreducible` and, in the latter case, the method `period` is used to compute the periodicity of the chain.

```
R> E <- matrix(0, nrow = 4, ncol = 4)
R> E[1, 2] <- 1
R> E[2, 1] <- 1/3; E[2, 3] <- 2/3
R> E[3,2] <- 1/4; E[3, 4] <- 3/4
R> E[4, 3] <- 1
R>
R> mcE <- new("markovchain", states = c("a", "b", "c", "d"),
R+      transitionMatrix = E,
R+      name = "E")
R> is.irreducible(mcE)

[1] TRUE

R> period(mcE)

[1] 2
```

The example Markov chain found in Mathematica web site (Wolfram Research 2013a) has been used, and is plotted in Figure 4.

```
R> require(matlab)
R> mathematicaMatr <- zeros(5)
R> mathematicaMatr[1,] <- c(0, 1/3, 0, 2/3, 0)
R> mathematicaMatr[2,] <- c(1/2, 0, 0, 0, 1/2)
R> mathematicaMatr[3,] <- c(0, 0, 1/2, 1/2, 0)
R> mathematicaMatr[4,] <- c(0, 0, 1/2, 1/2, 0)
R> mathematicaMatr[5,] <- c(0, 0, 0, 0, 1)
R> statesNames <- letters[1:5]
R> mathematicaMc <- new("markovchain", transitionMatrix = mathematicaMatr,
R+                    name = "Mathematica MC", states = statesNames)

Mathematica MC  Markov chain that is composed by:
Closed classes:
c d
e
Recurrent classes:
{c,d},{e}
Transient classes:
{a,b}
The Markov chain is not irreducible
The absorbing states are: e
```

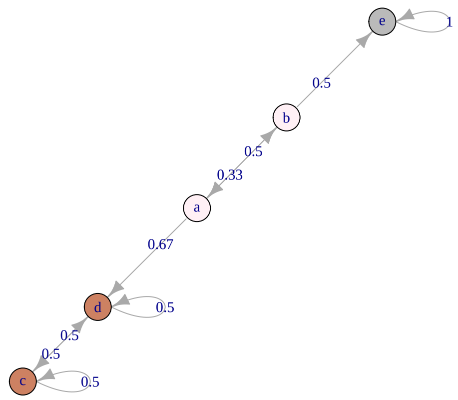

Figure 4: Mathematica 9 example. Markov chain plot.

### 4.4. First passage time distributions and means

Feres (2007) provides code to compute first passage time (within $1, 2, \ldots, n$ steps) given the initial state to be $i$. The MATLAB listings translated into R on which the `firstPassage` function is based are:

```
R> .firstpassageKernel <- function(P, i, n){
R>   G <- P
R>   H <- P[i,]
R>   E <- 1 - diag(size(P)[2])
R>   for (m in 2:n) {
R>     G <- P %*% (G * E)
R>     H <- rbind(H, G[i,])
R>   }
R>   return(H)
R> }
```

We conclude that the probability for the *first* rainy day to be the third one, given that the current state is sunny, is given by:

```
R> firstPassagePdF <- firstPassage(object = mcWeather, state = "sunny",
R+                                 n = 10)
R> firstPassagePdF[3, 3]
```

```
[1] 0.121
```

To compute the *mean* first passage times, i.e. the expected number of days before it rains given that today is sunny, we can use the `meanFirstPassageTime` function:

```
R> meanFirstPassageTime(mcWeather)

          sunny   cloudy     rain
sunny  0.000000 4.285714 6.666667
cloudy 3.725490 0.000000 5.000000
rain   4.117647 2.857143 0.000000
```

indicating e.g. that the average number of days of sun or cloud before rain is 6.67 if we start counting from a sunny day, and 5 if we start from a cloudy day. Note that we can also specify one or more destination states:

```
R> meanFirstPassageTime(mcWeather,"rain")

   sunny   cloudy
6.666667 5.000000
```

The implementation follows the matrix solutions by (Grinstead and Snell 2006). We can check the result by averaging the first passage probability density function:

```
R> firstPassagePdF.long <- firstPassage(object = mcWeather, state = "sunny",  n = 100)
R> sum(firstPassagePdF.long[,"rain"] * 1:100)

[1] 6.666664
```

### 4.5. Mean recurrence time

The `meanRecurrenceTime` method gives the first mean recurrence time (expected number of steps to go back to a state if it was the initial one) for each recurrent state in the transition probabilities matrix for a DTMC. Let's see an example:

```
R> meanRecurrenceTime(mcWeather)

   sunny   cloudy     rain
2.156863 3.142857 4.583333
```

Another example, with not all of its states being recurrent:

```
R> recurrentStates(probMc)

[1] "a" "b" "c" "f" "g" "i"

R> meanRecurrenceTime(probMc)

       f        b        g        i        a        c
1.000000 2.555556 2.875000 3.833333 1.500000 3.000000
```

### 4.6. Absorption probabilities and mean absorption time

We are going to use the Drunkard's random walk from (Grinstead and Snell 2006). We have a drunk person walking through the street. Each move the person does, if they have not arrived to either home (corner 1) or to the bar (corner 5) could be to the left corner or to the right one, with equal probability. In case of arrival to the bar or to home, the person stays there.

```
R> drunkProbs <- matlab::zeros(5, 5)
R> drunkProbs[1,1] <- drunkProbs[5,5] <- 1
R> drunkProbs[2,1] <- drunkProbs[2,3] <- 1/2
R> drunkProbs[3,2] <- drunkProbs[3,4] <- 1/2
R> drunkProbs[4,3] <- drunkProbs[4,5] <- 1/2
R>
R> drunkMc <- new("markovchain", transitionMatrix = drunkProbs)
R> drunkMc
```

```
Unnamed Markov chain
 A  5 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3, 4, 5
 The transition matrix  (by rows)  is defined as follows:
    1   2   3   4   5
1 1.0 0.0 0.0 0.0 0.0
2 0.5 0.0 0.5 0.0 0.0
3 0.0 0.5 0.0 0.5 0.0
4 0.0 0.0 0.5 0.0 0.5
5 0.0 0.0 0.0 0.0 1.0
```

Recurrent (in fact absorbing states) are:

```
R> recurrentStates(drunkMc)
```

```
[1] "1" "5"
```

Transient states are the rest:

```
R> transientStates(drunkMc)
```

```
[1] "2" "3" "4"
```

The probability of either being absorbed by the bar or by the sofa at home are:

```
R> absorptionProbabilities(drunkMc)
```

```
     1    5
2 0.75 0.25
3 0.50 0.50
4 0.25 0.75
```

which means that the probability of arriving home / bar is inversely proportional to the distance to each one.

But we also would like to know how much time does the person take to arrive there, which can be done with `meanAbsorptionTime`:

```
R> meanAbsorptionTime(drunkMc)
```

```
2 3 4
3 4 3
```

So it would take `3` steps to arrive to the destiny if the person is either in the second or fourth corner, and `4` steps in case of being at the same distance from home than to the bar.

## 4.7. Committor probability

The committor probability tells us the probability to reach a given state before another given. Suppose that we start in a cloudy day, the probabilities of experiencing a rainy day before a sunny one is 0.5:

```
R> committorAB(mcWeather,3,1)
```

```
 sunny cloudy   rain
   0.0    0.5    1.0
```

## 4.8. Hitting probabilities

Rewriting the system (9) as:

$$A = \left(\begin{array}{c|c|c|c} A_1 & 0 & \dots & 0 \\ \hline 0 & A_2 & \dots & 0 \\ \hline \vdots & \vdots & \ddots & 0 \\ \hline 0 & 0 & \dots & A_n \end{array}\right)$$

$$
\begin{aligned}
A_1 &= \begin{pmatrix} -1 & p_{1,2} & p_{1,3} & \cdots & p_{1,n} \\ 0 & (p_{2,2}-1) & p_{2,3} & \cdots & p_{2,n} \\ \vdots & \vdots & \vdots & \ddots & \vdots \\ 0 & p_{n,2} & p_{n,3} & \cdots & (p_{n,n}-1) \end{pmatrix} \\
A_2 &= \begin{pmatrix} (p_{1,1}-1) & 0 & p_{1,3} & \cdots & p_{1,n} \\ p_{2,1} & -1 & p_{2,3} & \cdots & p_{2,n} \\ \vdots & \vdots & \vdots & \ddots & \vdots \\ p_{n,1} & 0 & p_{n,3} & \cdots & (p_{n,n}-1) \end{pmatrix} \\
\vdots & \qquad\qquad\qquad \vdots \\
A_n &= \begin{pmatrix} (p_{1,1}-1) & p_{1,2} & p_{1,3} & \cdots & 0 \\ p_{2,1} & (p_{2,2}-1) & p_{2,3} & \cdots & 0 \\ \vdots & \vdots & \vdots & \ddots & \vdots \\ p_{n,1} & p_{n,2} & p_{n,3} & \cdots & -1 \end{pmatrix}
\end{aligned}
$$

$$
X_j = \begin{pmatrix} h_{1,j} \\ h_{2,j} \\ \vdots \\ h_{n,j} \end{pmatrix} \quad C_j = - \begin{pmatrix} p_{1,j} \\ p_{2,j} \\ \vdots \\ p_{n,j} \end{pmatrix}
$$

we end up having to solve the block systems:

$$
A_j \cdot X_j = C_j \tag{14}
$$

Let us imagine the $i$ -th state has transition probabilities: $(0,\ldots,0,\underset{i)}{1},0,\ldots,0)$. Then that same row would turn into $(0,0,\ldots,0)$ for some block, thus obtaining a singular matrix. Another case which may give us problems could be: state $i$ has the following transition probabilities: $(0,\ldots,0,\underset{j)}{1},0,\ldots,0)$ and the state $j$ has the following transition probabilities: $(0,\ldots,0,\underset{i)}{1},0,\ldots,0)$. Then when building some blocks we will end up with rows:

$$
\begin{gathered}
(0,\ldots,0,\underset{i)}{-1},0,\ldots,0,\underset{j)}{1},0,\ldots,0) \\
(0,\ldots,0,\underset{i)}{1},0,\ldots,0,\underset{j)}{-1},0,\ldots,0)
\end{gathered}
$$

which are linearly dependent. Our hypothesis is that if we treat the closed communicating classes differently, we *might* delete the linearity in the system. If we have a closed communicating class $C_u$, then $h_{i,j} = 1$ for all $i,j \in C_u$ and $h_{k,j} = 0$ for all $k \notin C_u$. Then we can set $X_u$ appropriately and solve the other $X_v$ using those values.

The method in charge of that in `markovchain` package is `hittingProbabilities`, which receives a Markov chain and computes the matrix $(h_{ij})_{i,j=1,\ldots,n}$ where $S = \{s_1,\ldots,s_n\}$ is the set of all states of the chain.

For the following chain:

```
R> M <- matlab::zeros(5, 5)
R> M[1,1] <- M[5,5] <- 1
R> M[2,1] <- M[2,3] <- 1/2
R> M[3,2] <- M[3,4] <- 1/2
R> M[4,2] <- M[4,5] <- 1/2
R>
R> hittingTest <- new("markovchain", transitionMatrix = M)
R> hittingProbabilities(hittingTest)
```

```
    1     2     3         4   5
1 1.0 0.000 0.000 0.0000000 0.0
2 0.8 0.375 0.500 0.3333333 0.2
3 0.6 0.750 0.375 0.6666667 0.4
4 0.4 0.500 0.250 0.1666667 0.6
5 0.0 0.000 0.000 0.0000000 1.0
```

we want to compute the hitting probabilities. That can be done with:

```
R> hittingProbabilities(hittingTest)
```

```
    1     2     3         4   5
1 1.0 0.000 0.000 0.0000000 0.0
2 0.8 0.375 0.500 0.3333333 0.2
3 0.6 0.750 0.375 0.6666667 0.4
4 0.4 0.500 0.250 0.1666667 0.6
5 0.0 0.000 0.000 0.0000000 1.0
```

In the case of the `mcWeather` Markov chain we would obtain a matrix with all its elements set to 1. That makes sense (and is desirable) since if today is sunny, we expect it would be sunny again at certain point in the time, and the same with rainy weather (that way we assure good harvests):

```
R> hittingProbabilities(mcWeather)
```

```
       sunny cloudy rain
sunny      1      1    1
cloudy     1      1    1
rain       1      1    1
```

## 5. Statistical analysis

Table 5 lists the functions and methods implemented within the package which help to fit, simulate and predict DTMC.

| Function | Purpose |
|---|---|
| `markovchainFit` | Function to return fitted Markov chain for a given sequence. |
| `predict` | Method to calculate predictions from `markovchain` or `markovchainList` objects. |
| `rmarkovchain` | Function to sample from `markovchain` or `markovchainList` objects. |

Table 5: The **markovchain** statistical functions.

### 5.1. Simulation

Simulating a random sequence from an underlying DTMC is quite easy thanks to the function `rmarkovchain`. The following code generates a year of weather states according to `mcWeather` underlying stochastic process.

```
R> weathersOfDays <- rmarkovchain(n = 365, object = mcWeather, t0 = "sunny")
R> weathersOfDays[1:30]

 [1] "sunny"  "sunny"  "rain"   "cloudy" "cloudy" "cloudy" "rain"   "rain"
 [9] "rain"   "cloudy" "rain"   "rain"   "rain"   "rain"   "cloudy" "cloudy"
[17] "sunny"  "sunny"  "sunny"  "sunny"  "sunny"  "cloudy" "sunny"  "sunny"
[25] "sunny"  "cloudy" "sunny"  "rain"   "rain"   "rain"
```

Similarly, it is possible to simulate one or more sequences from a non-homogeneous Markov chain, as the following code (applied on CCHC example) exemplifies.

```
R> patientStates <- rmarkovchain(n = 5, object = mcCCRC, t0 = "H",
R+                                include.t0 = TRUE)
R> patientStates[1:10,]

   iteration values
1          1      H
2          1      D
3          1      D
4          1      D
5          1      D
6          2      H
7          2      H
8          2      I
9          2      D
10         2      D
```

Two advance parameters are available to the `rmarkovchain` method which helps you decide which implementation to use. There are four options available : R, R in parallel, C++ and C++ in parallel. Two boolean parameters `useRcpp` and `parallel` will decide which implementation will be used. Default is `useRcpp = TRUE` and `parallel = FALSE` i.e. C++ implementation. The C++ implementation is generally faster than the R implementation. If you have multicore processors then you can take advantage of `parallel` parameter by setting it to TRUE. When both Rcpp=TRUE and parallel=TRUE the parallelization has been carried out using **RcppParallel** package (Allaire, Francois, Ushey, Vandenbrouck, Geelnard, and Intel 2016).

### 5.2. Estimation

A time homogeneous Markov chain can be fit from given data. Four methods have been implemented within current version of **markovchain** package: maximum likelihood, maximum likelihood with Laplace smoothing, Bootstrap approach, maximum a posteriori.

Equation 15 shows the maximum likelihood estimator (MLE) of the $p_{ij}$ entry, where the $n_{ij}$ element consists in the number sequences $(X_t = s_i, X_{t+1} = s_j)$ found in the sample, that is

$$\hat{p}_{ij}^{MLE} = \frac{n_{ij}}{\sum\limits_{u=1}^{k} n_{iu}}. \tag{15}$$

Equation (16) shows the standardError of the MLE (Skuriat-Olechnowska 2005).

$$SE_{ij} = \frac{\hat{p}_{ij}^{MLE}}{\sqrt{n_{ij}}} \tag{16}$$

```
R> weatherFittedMLE <- markovchainFit(data = weathersOfDays, method = "mle",name = "Weathe
R> weatherFittedMLE$estimate

Weather MLE
 A  3 - dimensional discrete Markov Chain defined by the following states:
 cloudy, rain, sunny
 The transition matrix  (by rows)  is defined as follows:
          cloudy       rain     sunny
cloudy 0.4102564 0.34188034 0.2478632
rain   0.4315789 0.42105263 0.1473684
sunny  0.1842105 0.09868421 0.7171053

R> weatherFittedMLE$standardError

           cloudy       rain      sunny
cloudy 0.05921541 0.05405603 0.04602705
rain   0.06740131 0.06657427 0.03938587
sunny  0.03481252 0.02548015 0.06868623
```

The Laplace smoothing approach is a variation of the MLE, where the $n_{ij}$ is substituted by $n_{ij} + \alpha$ (see Equation 17), being $\alpha$ an arbitrary positive stabilizing parameter.

$$\hat{p}_{ij}^{LS} = \frac{n_{ij} + \alpha}{\sum\limits_{u=1}^{k} (n_{iu} + \alpha)} \tag{17}$$

```
R> weatherFittedLAPLACE <- markovchainFit(data = weathersOfDays,
R+                                        method = "laplace", laplacian = 0.01,
R+                                        name = "Weather LAPLACE")
R> weatherFittedLAPLACE$estimate
```

```
Weather LAPLACE
 A  3 - dimensional discrete Markov Chain defined by the following states:
 cloudy, rain, sunny
 The transition matrix  (by rows)  is defined as follows:
          cloudy       rain     sunny
cloudy 0.4102367 0.34187815 0.2478852
rain   0.4315479 0.42102494 0.1474271
sunny  0.1842400 0.09873051 0.7170295
```

(NOTE: The Confidence Interval option is enabled by default. Remove this option to fasten computations.) Both MLE and Laplace approach are based on the `createSequenceMatrix` functions that returns the raw counts transition matrix.

```
R> createSequenceMatrix(stringchar = weathersOfDays)
```

```
       cloudy rain sunny
cloudy     48   40    29
rain       41   40    14
sunny      28   15   109
```

`stringchar` could contain `NA` values, and the transitions containing `NA` would be ignored.

An issue occurs when the sample contains only one realization of a state (say $X_\beta$) which is located at the end of the data sequence, since it yields to a row of zero (no sample to estimate the conditional distribution of the transition). In this case the estimated transition matrix is corrected assuming $p_{\beta,j} = 1/k$, being $k$ the possible states.

Create sequence matrix can also be used to obtain raw count transition matrices from a given $n * 2$ matrix as the following example shows:

```
R> myMatr<-matrix(c("a","b","b","a","a","b","b","b","b","a","a","a","b","a"),ncol=2)
R> createSequenceMatrix(stringchar = myMatr,toRowProbs = TRUE)
```

```
          a         b
a 0.6666667 0.3333333
b 0.5000000 0.5000000
```

A bootstrap estimation approach has been developed within the package in order to provide an indication of the variability of $\hat{p}_{ij}$ estimates. The bootstrap approach implemented within the **markovchain** package follows these steps:

1. bootstrap the data sequences following the conditional distributions of states estimated from the original one. The default bootstrap samples is 10, as specified in `nboot` parameter of `markovchainFit` function.

2. apply MLE estimation on bootstrapped data sequences that are saved in `bootStrapSamples` slot of the returned list.
3. the ${p^{BOOTSTRAP}}_{ij}$ is the average of all ${p^{MLE}}_{ij}$ across the `bootStrapSamples` list, normalized by row. A `standardError` of ${p^{\hat{MLE}}}_{ij}$ estimate is provided as well.

```
R> weatherFittedBOOT <- markovchainFit(data = weathersOfDays,
R+                                     method = "bootstrap", nboot = 20)
R> weatherFittedBOOT$estimate

BootStrap Estimate
 A  3 - dimensional discrete Markov Chain defined by the following states:
 cloudy, rain, sunny
 The transition matrix  (by rows)  is defined as follows:
          cloudy       rain     sunny
cloudy 0.4157240 0.32558044 0.2586955
rain   0.4314429 0.43353348 0.1350236
sunny  0.2011393 0.09714363 0.7017171

R> weatherFittedBOOT$standardError

            cloudy        rain       sunny
cloudy 0.008619212 0.007458442 0.008230809
rain   0.011101363 0.010771502 0.010903673
sunny  0.009353447 0.004539744 0.010628300
```

The bootstrapping process can be done in parallel thanks to **RcppParallel** package (Allaire *et al.* 2016). Parallelized implementation is definitively suggested when the data sample size or the required number of bootstrap runs is high.

```
R> weatherFittedBOOTParallel <- markovchainFit(data = weathersOfDays,
R>                                     method = "bootstrap", nboot = 200,
R>                                     parallel = TRUE)
R> weatherFittedBOOTParallel$estimate
R> weatherFittedBOOTParallel$standardError
```

The parallel bootstrapping uses all the available cores on a machine by default. However, it is also possible to tune the number of threads used. Note that this should be done in R before calling the `markovchainFit` function. For example, the following code will set the number of threads to 4.

```
R> RcppParallel::setNumThreads(2)
```

For more details, please refer to **RcppParallel** web site.

For all the fitting methods, the `logLikelihood` (Skuriat-Olechnowska 2005) denoted in Equation 18 is provided.

$$LLH = \sum_{i,j} n_{ij} * log(p_{ij}) \tag{18}$$

where $n_{ij}$ is the entry of the frequency matrix and $p_{ij}$ is the entry of the transition probability matrix.

```
R> weatherFittedMLE$logLikelihood

[1] -340.3603

R> weatherFittedBOOT$logLikelihood

[1] -340.6464
```

Confidence matrices of estimated parameters (parametric for MLE, non - parametric for BootStrap) are available as well. The `confidenceInterval` is provided with the two matrices: `lowerEndpointMatrix` and `upperEndpointMatrix`. The confidence level (CL) is 0.95 by default and can be given as an argument of the function `markovchainFit`. This is used to obtain the standard score (z-score). From classical inference theory, if $ci$ is the level of confidence required assuming normal distribution the $zscore(ci)$ solves $\Phi\left(1-\left(\frac{1-ci}{2}\right)\right)$ Equations 19 and 20 (Skuriat-Olechnowska 2005) show the `confidenceInterval` of a fitting. Note that each entry of the matrices is bounded between 0 and 1.

$$LowerEndpoint_{ij} = p_{ij} - zscore(CL) * SE_{ij} \tag{19}$$
$$UpperEndpoint_{ij} = p_{ij} + zscore(CL) * SE_{ij} \tag{20}$$

```
R> weatherFittedMLE$confidenceInterval

NULL

R> weatherFittedBOOT$confidenceInterval

$confidenceLevel
[1] 0.95

$lowerEndpointMatrix
          cloudy       rain     sunny
cloudy 0.4015467 0.31331240 0.2451570
rain   0.4131828 0.41581594 0.1170886
sunny  0.1857542 0.08967642 0.6842351

$upperEndpointMatrix
          cloudy      rain     sunny
cloudy 0.4299014 0.3378485 0.2722340
rain   0.4497031 0.4512510 0.1529585
sunny  0.2165243 0.1046108 0.7191991
```

A special function, `multinomialConfidenceIntervals`, has been written in order to obtain multinomial wise confidence intervals. The code has been based on and Rcpp translation of package's **MultinomialCI** functions Villacorta (2012) that were themselves based on the Sison and Glaz (1995) paper.

```
R> multinomialConfidenceIntervals(transitionMatrix =
R+          weatherFittedMLE$estimate@transitionMatrix,
R+          countsTransitionMatrix = createSequenceMatrix(weathersOfDays))

$confidenceLevel
[1] 0.95

$lowerEndpointMatrix
          cloudy       rain      sunny
cloudy 0.3162393 0.24786325 0.15384615
rain   0.3368421 0.32631579 0.05263158
sunny  0.1184211 0.03289474 0.65131579

$upperEndpointMatrix
          cloudy      rain     sunny
cloudy 0.5098498 0.4414738 0.3474567
rain   0.5460851 0.5355588 0.2618746

```

The functions for fitting DTMC have mostly been rewritten in C++ using **Rcpp** Eddelbuettel (2013) since version 0.2.

It is also possible to fit a DTMC object from `matrix` or `data.frame` objects as shown in following code.

```
R> data(holson)
R> singleMc<-markovchainFit(data=holson[,2:12],name="holson")
```

The same applies for `markovchainList`.

```
R> mcListFit<-markovchainListFit(data=holson[,2:6],name="holson")
R> mcListFit$estimate

holson  list of Markov chain(s)
Markovchain  1
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1
```

```
Markovchain  2
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  3
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.8 0.2
2 0.5 0.5

Markovchain  4
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  5
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  6
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.8 0.2
2 0.5 0.5

Markovchain  7
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
```

```
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  8
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  9
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.0 1.0
3 0.5 0.5

Markovchain  10
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  11
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  12
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.8 0.2
2 0.5 0.5
```

```
Markovchain  13
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.5000000 0.5000000
2 0.0000000 0.0000000 1.0000000
3 0.3333333 0.3333333 0.3333333

Markovchain  14
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 1.0000000 0.0000000 0.0000000
3 1.0000000 0.0000000 0.0000000

Markovchain  15
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.2000000 0.8000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

Markovchain  16
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 1.0000000 0.0000000 0.0000000
3 0.7500000 0.2500000 0.0000000

Markovchain  17
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
```

```
1 1 0
2 1 0

Markovchain  18
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  19
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  20
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.0 1.0
3 0.5 0.5

Markovchain  21
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  22
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  23
Unnamed Markov chain
```

```
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  24
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  25
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.8000000 0.2000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

Markovchain  26
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 0.7500000 0.2500000 0.0000000
3 1.0000000 0.0000000 0.0000000

Markovchain  27
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.5 0.5
2 1.0 0.0

Markovchain  28
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
```

```
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  29
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  30
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  31
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  32
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  33
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.0 1.0
3 0.5 0.5

Markovchain  34
```

```
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 3
 The transition matrix  (by rows)  is defined as follows:
  3
3 1

Markovchain  35
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  36
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.6 0.4
2 0.5 0.5

Markovchain  37
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 0 1
2 0 1

Markovchain  38
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.5 0.5
2 1.0 0.0

Markovchain  39
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
```

```
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  40
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  41
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  42
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  43
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  44
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  45
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
```

```
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  46
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.0 1.0
3 0.5 0.5

Markovchain  47
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  48
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.2 0.8
2 0.5 0.5

Markovchain  49
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  50
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
```

```
1 1

Markovchain  51
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  52
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:

Markovchain  90
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  91
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.2000000 0.8000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

Markovchain  92
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 1.0000000 0.0000000 0.0000000
3 1.0000000 0.0000000 0.0000000

Markovchain  93
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  94
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
```

```
  1
1 1

Markovchain  95
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  96
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  97
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.8 0.2
2 0.5 0.5

Markovchain  98
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
     1    2
1 0.75 0.25
2 1.00 0.00

Markovchain  99
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  100
```

```
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.0 1.0
3 0.5 0.5

Markovchain  101
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  102
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  103
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  104
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  105
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
```

```
1 1

Markovchain  106
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  107
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  108
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.8 0.2
2 0.5 0.5

Markovchain  109
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  110
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.0 1.0
3 0.5 0.5

Markovchain  111
Unnamed Markov chain
```

```
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  112
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.8000000 0.2000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

Markovchain  113
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 0.7500000 0.2500000 0.0000000
3 1.0000000 0.0000000 0.0000000

Markovchain  114
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  115
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  116
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
```

```
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.0 1.0
3 0.5 0.5

Markovchain  117
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  118
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.6000000 0.4000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

Markovchain  119
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 0.6666667 0.3333333 0.0000000
3 0.0000000 1.0000000 0.0000000

Markovchain  120
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  121
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
```

```
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.0 1.0
2 0.5 0.5

Markovchain  122
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 2
 The transition matrix  (by rows)  is defined as follows:
  2
2 1

Markovchain  123
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.5 0.5
2 1.0 0.0

Markovchain  124
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  125
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.8 0.2
2 0.5 0.5

Markovchain  126
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
```

```
2 1 0

Markovchain  127
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  128
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  129
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  130
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.4 0.6
2 0.5 0.5

Markovchain  131
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  132
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
```

```
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.8 0.2
3 0.5 0.5

Markovchain  133
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.7500000 0.2500000 0.0000000
2 0.3333333 0.3333333 0.3333333
3 1.0000000 0.0000000 0.0000000

Markovchain  134
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  135
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  136
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  137
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
```

```
1 0.6 0.4
2 0.5 0.5

Markovchain  138
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.6666667 0.0000000
2 0.0000000 0.5000000 0.5000000
3 0.3333333 0.3333333 0.3333333

Markovchain  139
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
  1 2 3
1 0 0 1
2 0 0 1
3 0 0 1

Markovchain  140
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 0.3333333 0.3333333 0.3333333
3 0.6000000 0.4000000 0.0000000

Markovchain  141
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  142
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
```

```
  1
1 1

Markovchain  143
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.0 1.0
3 0.5 0.5

Markovchain  144
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  145
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.6000000 0.4000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

Markovchain  146
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 1.0000000 0.0000000 0.0000000
3 1.0000000 0.0000000 0.0000000

Markovchain  147
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
```

```
1 0.0 1.0
3 0.5 0.5

Markovchain  148
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  149
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.0 1.0
3 0.5 0.5

Markovchain  150
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 0.3333333 0.3333333 0.3333333
3 0.2000000 0.4000000 0.4000000

Markovchain  151
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
  1 2 3
1 1 0 0
2 1 0 0
3 1 0 0

Markovchain  152
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
```

```
1 1

Markovchain  153
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.0 1.0
3 0.5 0.5

Markovchain  154
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 3
 The transition matrix  (by rows)  is defined as follows:
  3
3 1

Markovchain  155
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 0.3333333 0.3333333 0.3333333
3 0.6000000 0.4000000 0.0000000

Markovchain  156
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.0000000 1.0000000
2 0.0000000 0.0000000 1.0000000
3 0.3333333 0.3333333 0.3333333

Markovchain  157
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0
```

```
Markovchain  158
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  159
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  160
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  161
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.0 1.0
3 0.5 0.5

Markovchain  162
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  163
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
```

```
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  164
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  165
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.0 1.0
3 0.5 0.5

Markovchain  166
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  167
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.4000000 0.6000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

Markovchain  168
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
```

```
2 1.0000000 0.0000000 0.0000000
3 1.0000000 0.0000000 0.0000000

Markovchain  169
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  170
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  171
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  172
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  173
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.0 1.0
3 0.5 0.5

Markovchain  174
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
```

```
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  175
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.0 1.0
3 0.5 0.5

Markovchain  176
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  177
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.0 1.0
3 0.5 0.5

Markovchain  178
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 3
 The transition matrix  (by rows)  is defined as follows:
  3
3 1

Markovchain  179
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
```

```
1 0.5 0.5
3 1.0 0.0

Markovchain  180
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  181
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.2 0.8
2 0.5 0.5

Markovchain  182
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  183
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.0 1.0
3 0.5 0.5

Markovchain  184
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 2, 3
 The transition matrix  (by rows)  is defined as follows:
    2   3
2 0.5 0.5
3 0.2 0.8
```

```
Markovchain  185
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 2, 3
 The transition matrix  (by rows)  is defined as follows:
     2    3
2 0.00 1.00
3 0.75 0.25

Markovchain  186
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 2, 3
 The transition matrix  (by rows)  is defined as follows:
  2 3
2 0 1
3 0 1

Markovchain  187
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  188
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  189
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.0 1.0
3 0.5 0.5

Markovchain  190
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
```

```
 2, 3
 The transition matrix  (by rows)  is defined as follows:
    2   3
2 0.5 0.5
3 0.2 0.8

Markovchain  191
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 2, 3
 The transition matrix  (by rows)  is defined as follows:
  2 3
2 0 1
3 0 1

Markovchain  192
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  193
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.0 1.0
3 0.5 0.5

Markovchain  194
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  195
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
```

```
  1
1 1

Markovchain  196
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  197
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  198
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.0 1.0
2 0.5 0.5

Markovchain  199
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.5 0.5
2 1.0 0.0

Markovchain  200
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  201
Unnamed Markov chain
```

```
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.6 0.4
2 0.5 0.5

Markovchain  202
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  203
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  204
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  205
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  206
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1
```

```
Markovchain  207
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.8 0.2
2 0.5 0.5

Markovchain  208
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
     1    2
1 0.75 0.25
2 1.00 0.00

Markovchain  209
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  210
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  211
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  212
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
```

```
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  213
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  214
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  215
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  216
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  217
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  218
Unnamed Markov chain
```

```
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  219
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  220
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.6 0.4
2 0.5 0.5

Markovchain  221
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  222
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.2 0.8
2 0.5 0.5

Markovchain  223
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
```

```
1 1 0
2 1 0

Markovchain  224
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  225
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  226
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  227
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  228
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  229
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
```

```
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  230
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  231
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.0 1.0
3 0.5 0.5

Markovchain  232
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  233
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.2000000 0.8000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

Markovchain  234
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
```

```
2 1.0000000 0.0000000 0.0000000
3 1.0000000 0.0000000 0.0000000

Markovchain  235
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  236
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  237
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.2000000 0.2000000 0.6000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

Markovchain  238
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
  1 2 3
1 1 0 0
2 1 0 0
3 1 0 0

Markovchain  239
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.6 0.4
2 0.5 0.5
```

```
Markovchain  240
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  241
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  242
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  243
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.6 0.4
2 0.5 0.5

Markovchain  244
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  245
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
```

```
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.0 1.0
3 0.5 0.5

Markovchain  246
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 3
 The transition matrix  (by rows)  is defined as follows:
  3
3 1

Markovchain  247
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  248
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  249
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  250
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1
```

```
Markovchain  251
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.8 0.2
2 0.5 0.5

Markovchain  252
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.5 0.5
2 0.0 1.0

Markovchain  253
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.0000000 1.0000000
2 0.0000000 0.0000000 1.0000000
3 0.3333333 0.3333333 0.3333333

Markovchain  254
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  255
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  256
Unnamed Markov chain
```

```
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.2000000 0.6000000 0.2000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

Markovchain  257
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
  1 2 3
1 1 0 0
2 1 0 0
3 1 0 0

Markovchain  258
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.2000000 0.4000000 0.4000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

Markovchain  259
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
  1 2 3
1 1 0 0
2 1 0 0
3 1 0 0

Markovchain  260
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  261
```

```
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.4000000 0.6000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

Markovchain  262
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 1.0000000 0.0000000 0.0000000
3 1.0000000 0.0000000 0.0000000

Markovchain  263
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.6 0.4
2 0.5 0.5

Markovchain  264
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.0000000 1.0000000
2 0.0000000 0.0000000 1.0000000
3 0.3333333 0.3333333 0.3333333

Markovchain  265
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 0.3333333 0.3333333 0.3333333
3 0.8000000 0.2000000 0.0000000
```

```
Markovchain  266
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  267
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.6 0.4
2 0.5 0.5

Markovchain  268
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
          1         2
1 0.6666667 0.3333333
2 0.5000000 0.5000000

Markovchain  269
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  270
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.8 0.2
2 0.5 0.5

Markovchain  271
```

```
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  272
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  273
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  274
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.8 0.2
2 0.5 0.5

Markovchain  275
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.7500000 0.2500000
2 0.0000000 0.0000000 1.0000000
3 0.3333333 0.3333333 0.3333333

Markovchain  276
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
```

```
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 1.0000000 0.0000000 0.0000000
3 1.0000000 0.0000000 0.0000000

Markovchain  277
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.0 1.0
2 0.5 0.5

Markovchain  278
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 2, 3
 The transition matrix  (by rows)  is defined as follows:
    2   3
2 0.0 1.0
3 0.5 0.5

Markovchain  279
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  280
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.6000000 0.4000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

Markovchain  281
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
```

```
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 1.0000000 0.0000000 0.0000000
3 1.0000000 0.0000000 0.0000000

Markovchain  282
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.2000000 0.8000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

Markovchain  283
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 1.0000000 0.0000000 0.0000000
3 1.0000000 0.0000000 0.0000000

Markovchain  284
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  285
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.6000000 0.4000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

Markovchain  286
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
```

```
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 0.3333333 0.6666667 0.0000000
3 0.0000000 1.0000000 0.0000000

Markovchain  287
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  288
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  289
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  290
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  291
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.6 0.4
```

```
2 0.5 0.5

Markovchain  292
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 0 1
2 0 1

Markovchain  293
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.5 0.5
2 1.0 0.0

Markovchain  294
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.2 0.8
2 0.5 0.5

Markovchain  295
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 1.0000000 0.0000000
2 0.0000000 0.0000000 1.0000000
3 0.3333333 0.3333333 0.3333333

Markovchain  296
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 2, 3
 The transition matrix  (by rows)  is defined as follows:
     2    3
2 1.00 0.00
3 0.75 0.25
```

```
Markovchain  297
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 1.0000000 0.0000000 0.0000000
3 1.0000000 0.0000000 0.0000000

Markovchain  298
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.6 0.4
2 0.5 0.5

Markovchain  299
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  300
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  301
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  302
Unnamed Markov chain
```

```
 A  2 - dimensional discrete Markov Chain defined by the following states: 
 1, 2 
 The transition matrix  (by rows)  is defined as follows: 
    1   2
1 0.4 0.6
2 0.5 0.5

Markovchain  303 
Unnamed Markov chain 
 A  2 - dimensional discrete Markov Chain defined by the following states: 
 1, 2 
 The transition matrix  (by rows)  is defined as follows: 
  1 2
1 1 0
2 1 0

Markovchain  304 
Unnamed Markov chain 
 A  1 - dimensional discrete Markov Chain defined by the following states: 
 1 
 The transition matrix  (by rows)  is defined as follows: 
  1
1 1

Markovchain  305 
Unnamed Markov chain 
 A  1 - dimensional discrete Markov Chain defined by the following states: 
 1 
 The transition matrix  (by rows)  is defined as follows: 
  1
1 1

Markovchain  306 
Unnamed Markov chain 
 A  1 - dimensional discrete Markov Chain defined by the following states: 
 1 
 The transition matrix  (by rows)  is defined as follows: 
  1
1 1

Markovchain  307 
Unnamed Markov chain 
 A  2 - dimensional discrete Markov Chain defined by the following states: 
 1, 2 
 The transition matrix  (by rows)  is defined as follows: 
    1   2
1 0.8 0.2
```

```
2 0.5 0.5

Markovchain  308
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.2500000 0.7500000 0.0000000
2 0.0000000 0.0000000 1.0000000
3 0.3333333 0.3333333 0.3333333

Markovchain  309
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
  1 2 3
1 1 0 0
2 1 0 0
3 1 0 0

Markovchain  310
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  311
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  312
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.8000000 0.2000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333
```

```
Markovchain  313
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 2, 3
 The transition matrix  (by rows)  is defined as follows:
  2 3
2 0 1
3 0 1

Markovchain  314
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 2, 3
 The transition matrix  (by rows)  is defined as follows:
    2   3
2 0.5 0.5
3 0.6 0.4

Markovchain  315
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 1.0000000 0.0000000 0.0000000
3 1.0000000 0.0000000 0.0000000

Markovchain  316
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  317
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  318
Unnamed Markov chain
```

```
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  319
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  320
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.6 0.4
2 0.5 0.5

Markovchain  321
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.0000000 1.0000000
2 0.0000000 0.0000000 1.0000000

Markovchain  339
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
```

```
1 1 0
2 1 0

Markovchain  340
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  341
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.0 1.0
3 0.5 0.5

Markovchain  342
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  343
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  344
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  345
Unnamed Markov chain
```

```
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  346
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  347
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.4000000 0.6000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

Markovchain  348
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 2, 3
 The transition matrix  (by rows)  is defined as follows:
  2 3
2 0 1
3 0 1

Markovchain  349
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  350
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
```

```
  1
1 1

Markovchain  351
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  352
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.4 0.6
2 0.5 0.5

Markovchain  353
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 0 1
2 0 1

Markovchain  354
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.5 0.5
2 0.4 0.6

Markovchain  355
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 1.0000000 0.0000000
2 0.0000000 0.0000000 1.0000000
3 0.3333333 0.3333333 0.3333333
```

```
Markovchain  356
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 2, 3
 The transition matrix  (by rows)  is defined as follows:
          2         3
2 1.0000000 0.0000000
3 0.6666667 0.3333333

Markovchain  357
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 0.2500000 0.7500000 0.0000000
3 1.0000000 0.0000000 0.0000000

Markovchain  358
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  359
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.0 1.0
3 0.5 0.5

Markovchain  360
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 3
 The transition matrix  (by rows)  is defined as follows:
  3
3 1

Markovchain  361
```

```
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 2, 3
 The transition matrix  (by rows)  is defined as follows:
    2   3
2 0.5 0.5
3 0.2 0.8

Markovchain  362
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 1.0000000 0.0000000 0.0000000
3 0.2500000 0.7500000 0.0000000

Markovchain  363
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
          1         2
1 1.0000000 0.0000000
2 0.6666667 0.3333333

Markovchain  364
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  365
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  366
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
```

```
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.0 1.0
3 0.5 0.5

Markovchain  367
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 2, 3
 The transition matrix  (by rows)  is defined as follows:
    2   3
2 0.5 0.5
3 1.0 0.0

Markovchain  368
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.5 0.5
2 1.0 0.0

Markovchain  369
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  370
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  371
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1
```

```
Markovchain  372
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.4000000 0.4000000 0.2000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

Markovchain  373
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
    1   2 3
1 0.5 0.5 0
2 1.0 0.0 0
3 1.0 0.0 0

Markovchain  374
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
     1    2
1 0.25 0.75
2 0.00 1.00

Markovchain  375
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
     1    2
1 0.00 1.00
2 0.75 0.25

Markovchain  376
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.3333333 0.6666667
2 0.5000000 0.5000000 0.0000000
```

```
3 0.3333333 0.3333333 0.3333333

Markovchain  377
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
  1 2 3
1 1 0 0
2 1 0 0
3 1 0 0

Markovchain  378
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.0 1.0
3 0.5 0.5

Markovchain  379
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 0.3333333 0.3333333 0.3333333
3 0.4000000 0.4000000 0.2000000

Markovchain  380
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
  1 2 3
1 1 0 0
2 1 0 0
3 1 0 0

Markovchain  381
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
```

```
1 0.0000000 0.2000000 0.8000000

3 0.3333333 0.3333333 0.3333333

Markovchain  382
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 1.0000000 0.0000000 0.0000000
3 1.0000000 0.0000000 0.0000000

Markovchain  383
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  384
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  385
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.8 0.2
2 0.5 0.5

Markovchain  386
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0
```

```
Markovchain  387
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  388
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.8 0.2
2 0.5 0.5

Markovchain  389
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  390
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.0 1.0
3 0.5 0.5

Markovchain  391
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 2, 3
 The transition matrix  (by rows)  is defined as follows:
    2   3
2 0.5 0.5
3 0.2 0.8

Markovchain  392
Unnamed Markov chain
```

```
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 1.0000000 0.0000000 0.0000000

Markovchain  393
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  394
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  395
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  396
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.2 0.8
2 0.5 0.5

Markovchain  397
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
```

```
1 1 0
2 1 0

Markovchain  398
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  399
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.0 1.0
2 0.5 0.5

Markovchain  400
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 2
 The transition matrix  (by rows)  is defined as follows:
  2
2 1

Markovchain  401
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.5 0.5
2 1.0 0.0

Markovchain  402
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3

Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 1.0000000 0.0000000 0.0000000
3 1.0000000 0.0000000 0.0000000

Markovchain  419
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.8 0.2
2 0.5 0.5

Markovchain  420
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  421
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  422
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.8 0.2
2 0.5 0.5

Markovchain  423
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
```

```
 1, 2
 The transition matrix  (by rows)  is defined as follows:
     1    2
1 0.75 0.25
2 0.00 1.00

Markovchain  424
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.0 1.0
2 0.5 0.5

Markovchain  425
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.0000000 1.0000000
2 0.0000000 0.5000000 0.5000000
3 0.3333333 0.3333333 0.3333333

Markovchain  426
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 1.0000000 0.0000000 0.0000000
3 1.0000000 0.0000000 0.0000000

Markovchain  427
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  428
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
```

```
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  429
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.6 0.4
2 0.5 0.5

Markovchain  430
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  431
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  432
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  433
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.8000000 0.2000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333
```

```
Markovchain  434
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 1.0000000 0.0000000 0.0000000
3 1.0000000 0.0000000 0.0000000

Markovchain  435
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  436
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  437
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.6 0.4
2 0.5 0.5

Markovchain  438
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  439
Unnamed Markov chain
```

```
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  440
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  441
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  442
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  443
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  444
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  445
```

```
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  446
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.4 0.6
2 0.5 0.5

Markovchain  447
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  448
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  449
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  450
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
```

```
1 1

Markovchain  451
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.2 0.8
2 0.5 0.5

Markovchain  452
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  453
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  454
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  455
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.2 0.8
2 0.5 0.5

Markovchain  456
Unnamed Markov chain
```

```
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  457
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.4 0.6
2 0.5 0.5

Markovchain  458
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.5000000 0.5000000
2 0.0000000 0.0000000 1.0000000
3 0.3333333 0.3333333 0.3333333

Markovchain  459
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 1.0000000 0.0000000 0.0000000
3 1.0000000 0.0000000 0.0000000

Markovchain  460
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  461
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
```

```
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  462
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  463
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.8 0.2
2 0.5 0.5

Markovchain  464
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  465
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  466
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.6 0.4
2 0.5 0.5
```

```
Markovchain  467
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
          1         2
1 0.6666667 0.3333333
2 1.0000000 0.0000000

Markovchain  468
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 0 1

Markovchain  469
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  470
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  471
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  472
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
```

```
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  473
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.8 0.2
2 0.5 0.5

Markovchain  474
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.2500000 0.5000000 0.2500000
2 0.0000000 1.0000000 0.0000000
3 0.3333333 0.3333333 0.3333333

Markovchain  475
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
  1 2 3
1 1 0 0
2 1 0 0
3 1 0 0

Markovchain  476
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  477
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
```

```
  1
1 1

Markovchain  478
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.0 1.0
3 0.5 0.5

Markovchain  479
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  480
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  481
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  482
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  483
Unnamed Markov chain
```

```
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  484
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  485
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.2 0.8
2 0.5 0.5

Markovchain  486
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
     1    2
1 0.00 1.00
2 0.25 0.75

Markovchain  487
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 1.0000000 0.0000000
2 0.0000000 0.5000000 0.5000000

Markovchain  489
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  490
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.4 0.6
2 0.5 0.5

Markovchain  491
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  492
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.8 0.2
2 0.5 0.5

Markovchain  493
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
```

```
2 1 0

Markovchain  494
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  495
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.6000000 0.2000000 0.2000000

Markovchain  501
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  502
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  503
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  504
```

```
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.8 0.2
2 0.5 0.5

Markovchain  505
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  506
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  507
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.6000000 0.2000000 0.2000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

Markovchain  508
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
  1 2 3
1 1 0 0
2 1 0 0
3 1 0 0

Markovchain  509
Unnamed Markov chain
```

```
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  510
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  511
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  512
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.8 0.2
2 0.5 0.5

Markovchain  513
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  514
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1
```

```
Markovchain  515
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  516
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  517
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.8 0.2
3 0.5 0.5

Markovchain  518
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
  1 3
1 0 1
3 0 1

Markovchain  519
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 3
 The transition matrix  (by rows)  is defined as follows:
  3
3 1

Markovchain  520
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
```

```
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  521
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  522
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.6 0.4
2 0.5 0.5

Markovchain  523
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  524
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.2000000 0.8000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

Markovchain  525
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
```

```
1 0.3333333 0.3333333 0.3333333
2 1.0000000 0.0000000 0.0000000
3 0.0000000 0.5000000 0.5000000

Markovchain  526
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
    1   2 3
1 1.0 0.0 0
2 1.0 0.0 0
3 0.5 0.5 0

Markovchain  527
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
     1    2
1 0.75 0.25
2 1.00 0.00

Markovchain  528
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 0 1
2 0 1

Markovchain  529
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.5 0.5
2 1.0 0.0

Markovchain  530
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
```

```
1 1

Markovchain  531
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.0 1.0
3 0.5 0.5

Markovchain  532
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  533
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  534
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.6 0.4
2 0.5 0.5

Markovchain  535
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.0000000 1.0000000
2 0.0000000 0.0000000 1.0000000
3 0.3333333 0.3333333 0.3333333
```

```
Markovchain  536
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 0.3333333 0.3333333 0.3333333
3 0.8000000 0.2000000 0.0000000

Markovchain  537
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.0000000 1.0000000
2 0.0000000 0.0000000 1.0000000
3 0.3333333 0.3333333 0.3333333

Markovchain  538
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  539
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.6 0.4
2 0.5 0.5

Markovchain  540
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0
```

```
Markovchain  541
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  542
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  543
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.0 1.0
3 0.5 0.5

Markovchain  544
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  545
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  546
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
```

```
  1
1 1

Markovchain  547
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  548
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.4000000 0.6000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

Markovchain  549
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 1.0000000 0.0000000 0.0000000
3 1.0000000 0.0000000 0.0000000

Markovchain  550
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  551
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1
```

```
Markovchain  552
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  553
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.4000000 0.4000000 0.2000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

Markovchain  554
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
  1 2 3
1 1 0 0
2 1 0 0
3 1 0 0

Markovchain  555
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  556
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.0 1.0
3 0.5 0.5

Markovchain  557
Unnamed Markov chain
```

```
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  558
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.8 0.2
2 0.5 0.5

Markovchain  559
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  560
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  561
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  562
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
```

```
1 1

Markovchain  563
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.6 0.4
2 0.5 0.5

Markovchain  564
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  565
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  566
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  567
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.8 0.2
2 0.5 0.5

Markovchain  568
Unnamed Markov chain
```

```
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.5 0.5
2 0.0 1.0

Markovchain  569
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.0000000 1.0000000
2 0.0000000 0.0000000 1.0000000
3 0.3333333 0.3333333 0.3333333

Markovchain  570
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  571
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  572
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  573
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
```

```
    1   3
1 0.0 1.0
3 0.5 0.5

Markovchain  574
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  575
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.2 0.8
2 0.5 0.5

Markovchain  576
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  577
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.0 1.0
2 0.5 0.5

Markovchain  578
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.5 0.5
```

```
2 1.0 0.0

Markovchain  579
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  580
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.2 0.8
2 0.5 0.5

Markovchain  581
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.0000000 1.0000000

Markovchain  589
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
```

```
 The transition matrix  (by rows)  is defined as follows:
  1 2 3
1 1 0 0
2 1 0 0
3 1 0 0

Markovchain  590
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.2000000 0.8000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

Markovchain  591
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 0.0000000 0.0000000 1.0000000
3 0.5000000 0.2500000 0.2500000

Markovchain  592
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
  1 2 3
1 1 0 0
2 1 0 0
3 1 0 0

Markovchain  593
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  594
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
```

```
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  595
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  596
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  597
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  598
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  599
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  600
Unnamed Markov chain
```

```
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  601
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  602
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  603
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  604
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  605
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  606
```

```
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  607
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.0 1.0
3 0.5 0.5

Markovchain  608
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  609
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  610
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  611
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
```

```
1 0.0 1.0
3 0.5 0.5

Markovchain  612
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  613
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  614
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  615
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.4000000 0.6000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

Markovchain  616
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 2, 3
 The transition matrix  (by rows)  is defined as follows:
    2   3
2 0.5 0.5
3 1.0 0.0
```

```
Markovchain  617
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 0.2500000 0.5000000 0.2500000
3 0.0000000 1.0000000 0.0000000

Markovchain  618
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
  1 2 3
1 1 0 0
2 1 0 0
3 1 0 0

Markovchain  619
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  620
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  621
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.2 0.8
2 0.5 0.5

Markovchain  622
Unnamed Markov chain
```

```
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
     1    2
1 1.00 0.00
2 0.75 0.25

Markovchain  623
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  624
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.2 0.8
2 0.5 0.5

Markovchain  625
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  626
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.6000000 0.4000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

Markovchain  627
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
```

```
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 1.0000000 0.0000000 0.0000000
3 1.0000000 0.0000000 0.0000000

Markovchain  628
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  629
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  630
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  631
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  632
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1
```

```
Markovchain  633
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  634
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  635
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  636
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.4000000 0.4000000 0.2000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

Markovchain  637
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
  1 2 3
1 1 0 0
2 1 0 0
3 1 0 0

Markovchain  638
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
```

```
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.2000000 0.8000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

Markovchain  639
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 2, 3
 The transition matrix  (by rows)  is defined as follows:
  2 3
2 1 0
3 1 0

Markovchain  640
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.5 0.5
2 1.0 0.0

Markovchain  641
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  642
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  643
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
```

```
1 1

Markovchain  644
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.2000000 0.2000000 0.6000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

Markovchain  645
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
  1 2 3
1 1 0 0
2 1 0 0
3 1 0 0

Markovchain  646
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.0 1.0
3 0.5 0.5

Markovchain  647
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  648
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1
```

```
Markovchain  649
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  650
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.8000000 0.2000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

Markovchain  651
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 1.0000000 0.0000000 0.0000000
3 1.0000000 0.0000000 0.0000000

Markovchain  652
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  653
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.0 1.0
2 0.5 0.5

Markovchain  654
```

```
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 2, 3
 The transition matrix  (by rows)  is defined as follows:
    2   3
2 0.2 0.8
3 0.5 0.5

Markovchain  655
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 1.0000000 0.0000000 0.0000000
3 1.0000000 0.0000000 0.0000000

Markovchain  656
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.4 0.6
2 0.5 0.5

Markovchain  657
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  658
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  659
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
```

```
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  660
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.4 0.6
2 0.5 0.5

Markovchain  661
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
          1         2
1 1.0000000 0.0000000
2 0.6666667 0.3333333

Markovchain  662
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  663
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.0 1.0
2 0.5 0.5

Markovchain  664
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
```

```
1 0.5 0.5
2 1.0 0.0

Markovchain  665
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  666
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.6000000 0.4000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

Markovchain  667
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 1.0000000 0.0000000 0.0000000
3 1.0000000 0.0000000 0.0000000

Markovchain  668
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.0 1.0
3 0.5 0.5

Markovchain  669
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 3
 The transition matrix  (by rows)  is defined as follows:
  3
3 1
```

```
Markovchain  670
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  671
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.0 1.0
3 0.5 0.5

Markovchain  672
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  673
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  674
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  675
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
```

```
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  676
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  677
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  678
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.6000000 0.4000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

Markovchain  679
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 1.0000000 0.0000000 0.0000000
3 1.0000000 0.0000000 0.0000000

Markovchain  680
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
```

```
1 0.6 0.4
2 0.5 0.5

Markovchain  681
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.0 1.0
2 0.5 0.5

Markovchain  682
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  683
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  684
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.4 0.6
2 0.5 0.5

Markovchain  685
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0
```

```
Markovchain  686
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  687
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  688
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  689
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  690
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.6 0.4
2 0.5 0.5

Markovchain  691
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
```

```
1 1 0
2 1 0

Markovchain  692
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  693
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.8 0.2
2 0.5 0.5

Markovchain  694
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.2500000 0.5000000 0.2500000
2 0.0000000 1.0000000 0.0000000
3 0.3333333 0.3333333 0.3333333

Markovchain  695
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
  1 2 3
1 0 1 0
2 0 1 0
3 1 0 0

Markovchain  696
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
```

```
2 1 0

Markovchain  697
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  698
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  699
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  700
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.0 1.0
3 0.5 0.5

Markovchain  701
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  702
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
```

```
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  703
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  704
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  705
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  706
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  707
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.4 0.6
2 0.5 0.5

Markovchain  708
```

```
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  709
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  710
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  711
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  712
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  713
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1
```

```
Markovchain  714
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.2000000 0.8000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

Markovchain  715
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 1.0000000 0.0000000 0.0000000
3 1.0000000 0.0000000 0.0000000

Markovchain  716
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  717
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  718
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  719
Unnamed Markov chain
```

```
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  720
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  721
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  722
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  723
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  724
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:

Markovchain  766
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.4000000 0.6000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

Markovchain  767
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
```

```
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 1.0000000 0.0000000 0.0000000
3 1.0000000 0.0000000 0.0000000

Markovchain  768
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.0 1.0
3 0.5 0.5

Markovchain  769
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  770
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.2000000 0.8000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

Markovchain  771
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 0.0000000 1.0000000 0.0000000
3 0.7500000 0.2500000 0.0000000

Markovchain  772
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
```

```
 The transition matrix  (by rows)  is defined as follows:
          1         2
1 0.6666667 0.3333333
2 0.5000000 0.5000000

Markovchain  773
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  774
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  775
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.4 0.6
2 0.5 0.5

Markovchain  776
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  777
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.2 0.8
```

```
2 0.5 0.5

Markovchain  778
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 0 1
2 0 1

Markovchain  779
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 2, 3
 The transition matrix  (by rows)  is defined as follows:
    2   3
2 0.6 0.4
3 0.5 0.5

Markovchain  780
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 2, 3
 The transition matrix  (by rows)  is defined as follows:
          2         3
2 0.6666667 0.3333333
3 0.5000000 0.5000000

Markovchain  781
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 1.0000000 0.0000000 0.0000000
3 1.0000000 0.0000000 0.0000000

Markovchain  782
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.4 0.6
2 0.5 0.5
```

```
Markovchain  783
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  784
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  785
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  786
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.6000000 0.4000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

Markovchain  787
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 1.0000000 0.0000000 0.0000000
3 1.0000000 0.0000000 0.0000000

Markovchain  788
```

```
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.0 1.0
3 0.5 0.5

Markovchain  789
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  790
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.0 1.0
3 0.5 0.5

Markovchain  791
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  792
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.0 1.0
3 0.5 0.5

Markovchain  793
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
```

```
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  794
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  795
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.8000000 0.2000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

Markovchain  796
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 1.0000000 0.0000000 0.0000000
3 1.0000000 0.0000000 0.0000000

Markovchain  797
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  798
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
```

```
  1
1 1

Markovchain  799
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.6000000 0.4000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

Markovchain  800
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 1.0000000 0.0000000 0.0000000
3 1.0000000 0.0000000 0.0000000

Markovchain  801
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.0 1.0
3 0.5 0.5

Markovchain  802
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  803
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
```

```
1 1

Markovchain  804
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.4 0.6
2 0.5 0.5

Markovchain  805
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  806
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.2000000 0.4000000 0.4000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

Markovchain  807
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
  1 2 3
1 1 0 0
2 1 0 0
3 1 0 0

Markovchain  808
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1
```

```
Markovchain  809
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.0 1.0
2 0.5 0.5

Markovchain  810
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 2, 3
 The transition matrix  (by rows)  is defined as follows:
    2   3
2 0.0 1.0
3 0.5 0.5

Markovchain  811
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  812
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  813
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  814
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
```

```
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  815
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  816
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  817
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  818
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.6 0.4
2 0.5 0.5

Markovchain  819
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0
```

```
Markovchain  820
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  821
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  822
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  823
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  824
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  825
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1
```

```
Markovchain  826
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  827
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  828
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.8 0.2
2 0.5 0.5

Markovchain  829
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  830
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.6 0.4
2 0.5 0.5

Markovchain  831
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
```

```
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  832
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.8 0.2
2 0.5 0.5

Markovchain  833
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.5 0.5
2 1.0 0.0

Markovchain  834
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.3333333 0.6666667
2 1.0000000 0.0000000 0.0000000
3 0.3333333 0.3333333 0.3333333

Markovchain  835
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
  1 2 3
1 1 0 0
2 1 0 0
3 1 0 0

Markovchain  836
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
```

```
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.0 1.0
3 0.5 0.5

Markovchain  837
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 0.3333333 0.3333333 0.3333333
3 0.2000000 0.8000000 0.0000000

Markovchain  838
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  839
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.4 0.6
2 0.5 0.5

Markovchain  840
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  841
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
```

```
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.2000000 0.6000000 0.2000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

Markovchain  842
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
  1 2 3
1 1 0 0
2 1 0 0
3 1 0 0

Markovchain  843
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  844
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  845
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  846
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1
```

```
Markovchain  847
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  848
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  849
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.6 0.4
2 0.5 0.5

Markovchain  850
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.0000000 1.0000000
2 0.0000000 0.0000000 1.0000000
3 0.3333333 0.3333333 0.3333333

Markovchain  851
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  852
Unnamed Markov chain
```

```
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.8 0.2
2 0.5 0.5

Markovchain  853
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  854
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  855
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.8000000 0.2000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

Markovchain  856
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 1.0000000 0.0000000 0.0000000
3 1.0000000 0.0000000 0.0000000

Markovchain  857
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
```

```
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.4000000 0.6000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

Markovchain  858
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 1.0000000 0.0000000 0.0000000
3 1.0000000 0.0000000 0.0000000

Markovchain  859
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  860
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  861
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  862
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
```

```
1 1

Markovchain  863
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  864
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  865
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  866
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  867
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.4 0.6
2 0.5 0.5

Markovchain  868
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
```

```
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  869
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.0 1.0
2 0.5 0.5

Markovchain  870
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.5 0.5
2 1.0 0.0

Markovchain  871
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  872
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  873
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1
```

```
Markovchain  874
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  875
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.0 1.0
3 0.5 0.5

Markovchain  876
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  877
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.2 0.8
2 0.5 0.5

Markovchain  878
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  879
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
```

```
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.4 0.6
2 0.5 0.5

Markovchain  880
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  881
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.8 0.2
2 0.5 0.5

Markovchain  882
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
     1    2
1 0.75 0.25
2 1.00 0.00

Markovchain  883
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  884
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
```

```
  1
1 1

Markovchain  885
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  886
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.4000000 0.4000000 0.2000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

Markovchain  887
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
  1 2 3
1 1 0 0
2 1 0 0
3 0 1 0

Markovchain  888
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  889
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1
```

```
Markovchain  890
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.6 0.4
2 0.5 0.5

Markovchain  891
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
          1         2
1 0.3333333 0.6666667
2 0.0000000 1.0000000

Markovchain  892
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  893
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.2 0.8
3 0.5 0.5

Markovchain  894
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 1.0000000 0.0000000
2 0.3333333 0.3333333 0.3333333
3 0.7500000 0.2500000 0.0000000
```

```
Markovchain  895
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.0000000 1.0000000
2 0.0000000 0.0000000 1.0000000
3 0.3333333 0.3333333 0.3333333

Markovchain  896
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 3
 The transition matrix  (by rows)  is defined as follows:
  3
3 1

Markovchain  897
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  898
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  899
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  900
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
```

```
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  901
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  902
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.0 1.0
3 0.5 0.5

Markovchain  903
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  904
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.0 1.0
3 0.5 0.5

Markovchain  905
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0
```

```
Markovchain  906
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.0 1.0
2 0.5 0.5

Markovchain  907
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.5 0.5
2 0.8 0.2

Markovchain  908
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.0000000 1.0000000
2 0.0000000 0.0000000 1.0000000
3 0.3333333 0.3333333 0.3333333

Markovchain  909
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 0.3333333 0.3333333 0.3333333
3 0.4000000 0.6000000 0.0000000

Markovchain  910
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0
```

```
Markovchain  911
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  912
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.0 1.0
3 0.5 0.5

Markovchain  913
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  914
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  915
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.8 0.2
2 0.5 0.5

Markovchain  916
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
```

```
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  917
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.8 0.2
2 0.5 0.5

Markovchain  918
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.2500000 0.0000000 0.7500000
2 0.0000000 0.0000000 1.0000000
3 0.3333333 0.3333333 0.3333333

Markovchain  919
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 1.0000000 0.0000000 0.0000000
2 0.3333333 0.3333333 0.3333333
3 0.7500000 0.2500000 0.0000000

Markovchain  920
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  921
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
```

```
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.6000000 0.2000000 0.2000000
2 0.3333333 0.3333333 0.3333333
3 0.3333333 0.3333333 0.3333333

Markovchain  922
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
  1 2 3
1 0 0 1
2 0 1 0
3 0 1 0

Markovchain  923
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 0.5000000 0.5000000 0.0000000
3 0.0000000 1.0000000 0.0000000

Markovchain  924
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  925
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  926
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
```

```
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  927
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.8 0.2
2 0.5 0.5

Markovchain  928
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
     1    2
1 0.75 0.25
2 1.00 0.00

Markovchain  929
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  930
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  931
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1
```

```
Markovchain  932
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  933
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.2 0.8
2 0.5 0.5

Markovchain  934
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  935
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  936
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.2 0.8
2 0.5 0.5

Markovchain  937
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
```

```
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 1.0000000 0.0000000
2 0.0000000 0.2500000 0.7500000
3 0.3333333 0.3333333 0.3333333

Markovchain  938
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 1.0000000 0.0000000 0.0000000
3 1.0000000 0.0000000 0.0000000

Markovchain  939
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  940
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.0000000 0.6000000 0.4000000

3 0.3333333 0.3333333 0.3333333

Markovchain  941
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
          1         2         3
1 0.3333333 0.3333333 0.3333333
2 0.3333333 0.3333333 0.3333333
3 1.0000000 0.0000000 0.0000000

Markovchain  942
Unnamed Markov chain
```

```
 A  3 - dimensional discrete Markov Chain defined by the following states:
 1, 2, 3
 The transition matrix  (by rows)  is defined as follows:
  1 2 3
1 1 0 0
2 1 0 0
3 1 0 0

Markovchain  943
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.6 0.4
2 0.5 0.5

Markovchain  944
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  945
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  946
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  947
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
```

```
  1
1 1

Markovchain  948
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  949
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  950
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  951
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.2 0.8
2 0.5 0.5

Markovchain  952
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  953
Unnamed Markov chain
```

```
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.4 0.6
2 0.5 0.5

Markovchain  954
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  955
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.0 1.0
2 0.5 0.5

Markovchain  956
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 2, 3
 The transition matrix  (by rows)  is defined as follows:
    2   3
2 0.0 1.0
3 0.5 0.5

Markovchain  957
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 3
 The transition matrix  (by rows)  is defined as follows:
    1   3
1 0.5 0.5
3 1.0 0.0

Markovchain  958
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
```

```
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  959
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  960
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.8 0.2
2 0.5 0.5

Markovchain  961
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
  1 2
1 1 0
2 1 0

Markovchain  962
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  963
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  964
```

```
Unnamed Markov chain
 A  1 - dimensional discrete Markov Chain defined by the following states:
 1
 The transition matrix  (by rows)  is defined as follows:
  1
1 1

Markovchain  965
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:
    1   2
1 0.8 0.2
2 0.5 0.5

Markovchain  966
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 1, 2
 The transition matrix  (by rows)  is defined as follows:

1 0.0 1.0
3 0.5 0.5
```

Finally, given a `list` object, it is possible to fit a `markovchain` object or to obtain the raw transition matrix.

```
R> c1<-c("a","b","a","a","c","c","a")
R> c2<-c("b")
R> c3<-c("c","a","a","c")
R> c4<-c("b","a","b","a","a","c","b")
R> c5<-c("a","a","c",NA)
R> c6<-c("b","c","b","c","a")
R> mylist<-list(c1,c2,c3,c4,c5,c6)
R> mylistMc<-markovchainFit(data=mylist)
R> mylistMc
```

```
$estimate
MLE Fit
```

```
 A  3 - dimensional discrete Markov Chain defined by the following states:
 a, b, c
 The transition matrix  (by rows)  is defined as follows:
    a         b         c
a 0.4 0.2000000 0.4000000
b 0.6 0.0000000 0.4000000
c 0.5 0.3333333 0.1666667

$standardError
          a         b         c
a 0.2000000 0.1414214 0.2000000
b 0.3464102 0.0000000 0.2828427
c 0.2886751 0.2357023 0.1666667

$confidenceLevel

Markovchain  5
Unnamed Markov chain
 A  2 - dimensional discrete Markov Chain defined by the following states:
 a, c
 The transition matrix  (by rows)  is defined as follows:
  a c
a 0 1
c 0 1

Markovchain  6
Unnamed Markov chain
 A  3 - dimensional discrete Markov Chain defined by the following states:
 a, b, c
 The transition matrix  (by rows)  is defined as follows:
          a         b         c
a 0.3333333 0.3333333 0.3333333
b 0.3333333 0.3333333 0.3333333
c 0.5000000 0.5000000 0.0000000
```

If any transition contains NA, it will be ignored in the results as the above example showed.

### 5.3. Prediction

The $n$-step forward predictions can be obtained using the predict methods explicitly written for markovchain and markovchainList objects. The prediction is the mode of the conditional distribution of $X_{t+1}$ given $X_t = s_j$, being $s_j$ the last realization of the DTMC (homogeneous or non-homogeneous).

*Predicting from a markovchain object*

The 3-days forward predictions from markovchain object can be generated as follows, assuming that the last two days were respectively "cloudy" and "sunny".

```
R> predict(object = weatherFittedMLE$estimate, newdata = c("cloudy", "sunny"),
R+         n.ahead = 3)
```

```
[1] "sunny" "sunny" "sunny"
```

*Predicting from a markovchainList object*

Given an initial two years health status, the 5-year ahead prediction of any CCRC guest is

```
R> predict(mcCCRC, newdata = c("H", "H"), n.ahead = 5)
```

```
[1] "H" "D" "D"
```

The prediction has stopped at time sequence since the underlying non-homogeneous Markov chain has a length of four. In order to continue five years ahead, the continue=TRUE parameter setting makes the predict method keeping to use the last markovchain in the sequence list.

```
R> predict(mcCCRC, newdata = c("H", "H"), n.ahead = 5, continue = TRUE)
```

```
[1] "H" "D" "D" "D" "D"
```

### 5.4. Statistical Tests

In this section, we describe the statistical tests: assessing the Markov property (verifyMarkovProperty), the order (assessOrder), the stationary (assessStationarity) of a Markov chain sequence, and the divergence test for empirically estimated transition matrices (divergenceTest). Most of such tests are based on the $\chi^2$ statistics. Relevant references are Kullback *et al.* (1962) and Anderson and Goodman (1957).

All such tests have been designed for small samples, since it is easy to detect departures from Markov property as long as the sample size increases. In addition, the accuracy of the statistical inference functions has been questioned and will be thoroughly investigated in future versions of the package.

*Assessing the Markov property of a Markov chain sequence*

The `verifyMarkovProperty` function verifies whether the Markov property holds for the given chain. The test implemented in the package looks at triplets of successive observations. If $x_1, x_2, \ldots, x_N$ is a set of observations and $n_{ijk}$ is the number of times $t$ ($1 \leq t \leq N-2$) such that $x_t = i, x_{t+1} = j, x_{x+2} = k$, then if the Markov property holds $n_{ijk}$ follows a Binomial distribution with parameters $n_{ij}$ and $p_{jk}$. A classical $\chi^2$ test can check this distributional assumption, since $\sum_i \sum_j \sum_k \frac{n_{ijk} - n_{ij}\hat{p_{jk}}}{n_{ij}\hat{p_{jk}}} \sim \chi^2\left(|S|^3\right)$ where $|S|$ is the cardinality of the state space.

```
R> sample_sequence<-c("a", "b", "a", "a", "a", "a", "b", "a", "b", "a",
R+                    "b", "a", "a", "b", "b", "b", "a")
R> verifyMarkovProperty(sample_sequence)

Warning in verifyMarkovProperty(sample_sequence): The accuracy of the
statistical inference functions has been questioned. It will be thoroughly
investigated in future versions of the package.

Testing markovianity property on given data sequence
Chi - square statistic is: 0.28
Degrees of freedom are: 8
And corresponding p-value is: 0.9999857
```

*Assessing the order of a Markov chain sequence*

The `assessOrder` function checks whether the given chain is of first order or of second order. For each possible present state, we construct a contingency table of the frequency of the future state for each past to present state transition as shown in Table 6.

| past | present | future a | future b |
|---|---|---|---|
| a | a | 2 | 2 |
| b | a | 2 | 2 |

Table 6: Contingency table to assess the order for the present state a.

Using the table, the function performs the $\chi^2$ test by calling the `chisq.test` function. This test returns a list of the chi-squared value and the p-value. If the p-value is greater than the given significance level, we cannot reject the hypothesis that the sequence is of first order.

```
R> data(rain)
R> assessOrder(rain$rain)

Warning in assessOrder(rain$rain): The accuracy of the statistical inference
functions has been questioned. It will be thoroughly investigated in future
versions of the package.
```

```
The assessOrder test statistic is:  26.09575
The Chi-Square d.f. are:  12
The p-value is:  0.01040395
```

*Assessing the stationarity of a Markov chain sequence*

The `assessStationarity` function assesses if the transition probabilities of the given chain change over time. To be more specific, the chain is stationary if the following condition meets.

$$p_{ij}(t) = p_{ij} \quad \text{for all} \quad t \tag{21}$$

For each possible state, we construct a contingency table of the estimated transition probabilities over time as shown in Table 7.

| time (t) | probability of transition to a | probability of transition to b |
|---|---|---|
| 1 | 0 | 1 |
| 2 | 0 | 1 |
| . | . | . |
| . | . | . |
| . | . | . |
| 16 | 0.44 | 0.56 |

Table 7: Contingency table to assess the stationarity of the state a.

Using the table, the function performs the $\chi^2$ test by calling the `chisq.test` function. This test returns a list of the chi-squared value and the p-value. If the p-value is greater than the given significance level, we cannot reject the hypothesis that the sequence is stationary.

```
R> assessStationarity(rain$rain, 10)

Warning in assessStationarity(rain$rain, 10): The accuracy of the statistical
inference functions has been questioned. It will be thoroughly investigated in
future versions of the package.

Warning in chisq.test(mat): Chi-squared approximation may be incorrect

Warning in chisq.test(mat): Chi-squared approximation may be incorrect

Warning in chisq.test(mat): Chi-squared approximation may be incorrect

The assessStationarity test statistic is:  4.181815
The Chi-Square d.f. are:  54
The p-value is:  1
```

*Divergence tests for empirically estimated transition matrices*

This section discusses tests developed to verify whether:

1. An empirical transition matrix is consistent with a theoretical one.
2. Two or more empirical transition matrices belongs to the same DTMC.

The first test is implemented by the `verifyEmpiricalToTheoretical` function. Being $f_{ij}$ the raw transition count, Kullback *et al.* (1962) shows that $2 * \sum_{i=1}^{r} \sum_{j=1}^{r} f_{ij} \ln \frac{f_{ij}}{f_{i.} P(E_j|E_i)} \sim \chi^2 \left(r * (r-1)\right)$. The following example is taken from Kullback *et al.* (1962):

```
R> sequence<-c(0,1,2,2,1,0,0,0,0,0,0,1,2,2,2,1,0,0,1,0,0,0,0,0,0,1,1,
R+ 2,0,0,2,1,1,0,0,0,0,0,0,0,0,0,0,0,0,0,1,1,1,1,0,0,0,0,2,1,0,
R+ 0,2,1,0,0,0,0,0,0,1,1,1,2,2,0,0,2,1,1,1,1,2,1,1,1,1,1,1,1,1,1,0,2,
R+ 0,1,1,0,0,0,1,2,2,0,0,0,0,0,0,2,2,2,1,1,1,1,0,1,1,1,1,0,0,2,1,1,
R+ 0,0,0,0,0,2,2,1,1,1,1,1,2,1,2,0,0,0,1,2,2,2,0,0,0,1,1)
R> mc=matrix(c(5/8,1/4,1/8,1/4,1/2,1/4,1/4,3/8,3/8),byrow=TRUE, nrow=3)
R> rownames(mc)<-colnames(mc)<-0:2; theoreticalMc<-as(mc, "markovchain")
R> verifyEmpiricalToTheoretical(data=sequence,object=theoreticalMc)
```

```
Warning in verifyEmpiricalToTheoretical(data = sequence, object =
theoreticalMc): The accuracy of the statistical inference functions has been
questioned. It will be thoroughly investigated in future versions of the
package.
```

```
Testing whether the
   0  1  2
0 51 11  8
1 12 31  9
2  6 11 10
transition matrix is compatible with
      0     1     2
0 0.625 0.250 0.125
1 0.250 0.500 0.250
2 0.250 0.375 0.375
[1] "theoretical transition matrix"
ChiSq statistic is 6.551795 d.o.f are 6 corresponding p-value is 0.3642899
```

```
$statistic
       0
6.551795

$dof
[1] 6

$pvalue
        0
0.3642899
```

The second one is implemented by the `verifyHomogeneity` function, inspired by (Kullback *et al.* 1962, section 9). Assuming that $i = 1, 2, \ldots, s$ DTMC samples are available and that the cardinality of the state space is $r$ it verifies whether the $s$ chains belongs to the same unknown one. Kullback *et al.* (1962) shows that its test statistics follows a chi-square law, $2 * \sum_{i=1}^{s} \sum_{j=1}^{r} \sum_{k=1}^{r} f_{ijk} \ln \frac{n * f_{ijk}}{f_{i..} f_{.jk}} \sim \chi^2 \left(r * (r-1)\right)$. Also the following example is taken from Kullback *et al.* (1962):

```
R> data(kullback)
R> verifyHomogeneity(inputList=kullback,verbose=TRUE)

Warning in verifyHomogeneity(inputList = kullback, verbose = TRUE): The
accuracy of the statistical inference functions has been questioned. It will be
thoroughly investigated in future versions of the package.

Testing homogeneity of DTMC underlying input list
ChiSq statistic is 275.9963 d.o.f are 35 corresponding p-value is 0

$statistic
[1] 275.9963

$dof
[1] 35

$pvalue
[1] 0
```

## 5.5. Continuous Times Markov Chains

*Intro*

The **markovchain** package provides functionality for continuous time Markov chains (CTMCs). CTMCs are a generalization of discrete time Markov chains (DTMCs) in that we allow time to be continuous. We assume a finite state space $S$ (for an infinite state space wouldn't fit in memory). We can think of CTMCs as Markov chains in which state transitions can happen at any time.

More formally, we would like our CTMCs to satisfy the following two properties:

- The Markov property - let $F_{X(s)}$ denote the information about $X$ up to time $s$. Let $j \in S$ and $s \leq t$. Then, $P(X(t) = j | F_{X(s)}) = P(X(t) = j | X(s))$.
- Time homogeneity - $P(X(t) = j | X(s) = k) = P(X(t-s) = j | X(0) = k)$.

If both the above properties are satisfied, it is referred to as a time-homogeneous CTMC. If a transition occurs at time $t$, then $X(t)$ denotes the new state and $X(t) \neq X(t-)$.

Now, let $X(0) = x$ and let $T_x$ be the time a transition occurs from this state. We are interested in the distribution of $T_x$. For $s, t \geq 0$, it can be shown that \$ P(T_x > s+t | T_x > s) = P(T_x > t) \$

This is the memory less property that only the exponential random variable exhibits. Therefore, this is the sought distribution, and each state $s \in S$ has an exponential holding parameter $\lambda(s)$. Since $\mathrm{E}T_x = \frac{1}{\lambda(x)}$, higher the rate $\lambda(x)$, smaller the expected time of transitioning out of the state $x$.

However, specifying this parameter alone for each state would only paint an incomplete picture of our CTMC. To see why, consider a state $x$ that may transition to either state $y$ or $z$. The holding parameter enables us to predict when a transition may occur if we start off in state $x$, but tells us nothing about which state will be next.

To this end, we also need transition probabilities associated with the process, defined as follows (for $y \neq x$) - $p_{xy} = P(X(T_s) = y|X(0) = x)$. Note that $\sum_{y \neq x} p_{xy} = 1$. Let $Q$ denote this transition matrix ($Q_{ij} = p_{ij}$). What is key here is that $T_x$ and the state $y$ are independent random variables. Let's define $\lambda(x, y) = \lambda(x)p_{xy}$

We now look at Kolmogorov's backward equation. Let's define $P_{ij}(t) = P(X(t) = j|X(0) = i)$ for $i, j \in S$. The backward equation is given by (it can be proved) $P_{ij}(t) = \delta_{ij}e^{-\lambda(i)t} + \int_0^t \lambda(i)e^{-\lambda(i)t} \sum_{k \neq i} Q_{ik}P_{kj}(t-s)ds$. Basically, the first term is non-zero if and only if $i = j$ and represents the probability that the first transition from state $i$ occurs after time $t$. This would mean that at $t$, the state is still $i$. The second term accounts for any transitions that may occur before time $t$ and denotes the probability that at time $t$, when the smoke clears, we are in state $j$.

This equation can be represented compactly as follows $P'(t) = AP(t)$ where $A$ is the *generator* matrix.

$$A(i, j) = \begin{cases} \lambda(i, j) & \text{if } i \neq j \\ -\lambda(i) & \text{else.} \end{cases}$$

Observe that the sum of each row is 0. A CTMC can be completely specified by the generator matrix.

*Stationary Distributions*

The following theorem guarantees the existence of a unique stationary distribution for CTMCs. Note that $X(t)$ being irreducible and recurrent is the same as $X_n(t)$ being irreducible and recurrent.

Suppose that $X(t)$ is irreducible and recurrent. Then $X(t)$ has an invariant measure $\eta$, which is unique up to multiplicative factors. Moreover, for each $k \in S$, we have

$$\eta_k = \frac{\pi_k}{\lambda(k)}$$

where $\pi$ is the unique invariant measure of the embedded discrete time Markov chain $Xn$. Finally, $\eta$ satisfies

$$0 < \eta_j < \infty, \forall j \in S$$

and if $\sum_i \eta_i < \infty$ then $\eta$ can be normalized to get a stationary distribution.

*Estimation*

Let the data set be $D = \{(s_0, t_0), (s_1, t_1), ..., (s_{N-1}, t_{N-1})\}$ where $N = |D|$. Each $s_i$ is a state from the state space $S$ and during the time $[t_i, t_{i+1}]$ the chain is in state $s_i$. Let the parameters be represented by $\theta = \{\lambda, P\}$ where $\lambda$ is the vector of holding parameters for each state and $P$ the transition matrix of the embedded discrete time Markov chain.

Then the probability is given by

$$Pr(D|\theta) \propto \lambda(s_0)e^{-\lambda(s_0)(t_1-t_0)}Pr(s_1|s_0) \cdot \ldots \cdot \lambda(s_{N-2})e^{-\lambda(s_{N-2})(t_{N-1}-t_{N-2})}Pr(s_{N-1}|s_{N-2})$$

Let $n(j|i)$ denote the number of $i$->$j$ transitions in $D$, and $n(i)$ the number of times $s_i$ occurs in $D$. Let $t(s_i)$ denote the total time the chain spends in state $s_i$.

Then the MLEs are given by

$$\hat{\lambda(s)} = \frac{n(s)}{t(s)}, \hat{Pr(j|i)} = \frac{n(j|i)}{n(i)}$$

*Expected Hitting Time*

The package provides a function `ExpectedTime` to calculate average hitting time from one state to another. Let the final state be j, then for every state $i \in S$, where $S$ is the set of all states and holding time $q_i > 0$ for every $i \neq j$. Assuming the conditions to be true, expected hitting time is equal to minimal non-negative solution vector $p$ to the system of linear equations:

$$\begin{cases} p_k = 0 & k = j \\ -\sum_{l \in I} q_{kl} p_k = 1 & k \neq j \end{cases} \tag{22}$$

*Probability at time t*

The package provides a function `probabilityatT` to calculate probability of every state according to given `ctmc` object. Here we use Kolmogorov's backward equation $P(t) = P(0)e^{tQ}$ for $t \geq 0$ and $P(0) = I$. Here $P(t)$ is the transition function at time t. The value $P(t)[i][j]$ at time $P(t)$ describes the probability of the state at time $t$ to be equal to j if it was equal to i at time $t = 0$. It takes care of the case when `ctmc` object has a generator represented by columns. If initial state is not provided, the function returns the whole transition matrix $P(t)$.

*Examples*

To create a CTMC object, you need to provide a valid generator matrix, say $Q$. The CTMC object has the following slots - states, generator, by row, name (look at the documentation object for further details). Consider the following example in which we aim to model the transition of a molecule from the $\sigma$ state to the $\sigma^*$ state. When in the former state, if it absorbs sufficient energy, it can make the jump to the latter state and remains there for some time before transitioning back to the original state. Let us model this by a CTMC:

```
R> energyStates <- c("sigma", "sigma_star")
R> byRow <- TRUE
```

```
R> gen <- matrix(data = c(-3, 3,
R+                         1, -1), nrow = 2,
R+                byrow = byRow, dimnames = list(energyStates, energyStates))
R> molecularCTMC <- new("ctmc", states = energyStates,
R+                   byrow = byRow, generator = gen,
R+                   name = "Molecular Transition Model")
```

To generate random CTMC transitions, we provide an initial distribution of the states. This must be in the same order as the dimnames of the generator. The output can be returned either as a list or a data frame.

```
R> statesDist <- c(0.8, 0.2)
R> rctmc(n = 3, ctmc = molecularCTMC, initDist = statesDist, out.type = "df", include.T0 =

      states               time
1 sigma_star 0.0426796986647132
2      sigma  0.440718898076582
3 sigma_star   1.73288680186201
```

$n$ represents the number of samples to generate. There is an optional argument $T$ for `rctmc`. It represents the time of termination of the simulation. To use this feature, set $n$ to a very high value, say `Inf` (since we do not know the number of transitions before hand) and set $T$ accordingly.

```
R> statesDist <- c(0.8, 0.2)
R> rctmc(n = Inf, ctmc = molecularCTMC, initDist = statesDist, T = 2)

[[1]]
[1] "sigma"      "sigma_star" "sigma"

[[2]]
[1] 0.000000 1.383179 1.806847
```

To obtain the stationary distribution simply invoke the `steadyStates` function

```
R> steadyStates(molecularCTMC)

     sigma sigma_star
[1,]  0.25       0.75
```

For fitting, use the `ctmcFit` function. It returns the MLE values for the parameters along with the confidence intervals.

```
R> data <- list(c("a", "b", "c", "a", "b", "a", "c", "b", "c"),
R+              c(0, 0.8, 2.1, 2.4, 4, 5, 5.9, 8.2, 9))
R> ctmcFit(data)
```

```

```

One approach to obtain the generator matrix is to apply the `logm` function from the **expm** package on a transition matrix. Numeric issues arise, see Israel, Rosenthal, and Wei (2001). For example, applying the standard `method` ('Higham08') on `mcWeather` raises an error, whilst the alternative method (eigenvalue decomposition) is OK. The following code estimates the generator matrix of the `mcWeather` transition matrix.

```
R> mcWeatherQ <- expm::logm(mcWeather@transitionMatrix,method='Eigen')
R> mcWeatherQ
```

```
           sunny     cloudy       rain
sunny  -0.863221   2.428723  -1.565502
cloudy  4.284592 -20.116312  15.831720
rain   -4.414019  24.175251 -19.761232
```

Therefore, the “half - day” transition probability for mcWeather DTMC is

```
R> mcWeatherHalfDayTM <- expm::expm(mcWeatherQ*.5)
R> mcWeatherHalfDay <- new("markovchain",transitionMatrix=mcWeatherHalfDayTM,name="Half Da
R> mcWeatherHalfDay
```

```
Half Day Weather Transition Matrix
 A  3 - dimensional discrete Markov Chain defined by the following states:
 sunny, cloudy, rain
 The transition matrix  (by rows)  is defined as follows:
            sunny    cloudy       rain
sunny  0.81598647 0.1420068 0.04200677
cloudy 0.21970167 0.4401492 0.34014916
rain   0.07063048 0.5146848 0.41468476
```

The **ctmcd** package (Pfeuffer 2017) provides various functions to estimate the generator matrix (GM) of a CTMC process using different methods. The following code provides a way to join **markovchain** and **ctmcd** computations.

```
R> require(ctmcd)
```

```
Loading required package: ctmcd
```

```
R> require(expm)
```

```
Loading required package: expm

Loading required package: Matrix

Attaching package: 'expm'

The following object is masked from 'package:Matrix':

    expm
```

```
R> #defines a function to transform a GM into a TM
R> gm_to_markovchain<-function(object, t=1) {
R+   if(!(class(object) %in% c("gm","matrix","Matrix")))
R+     stop("Error! Expecting either a matrix or a gm object")
R+   if ( class(object) %in% c("matrix","Matrix")) generator_matrix<-object else generator
R+   #must add importClassesFrom("markovchain",markovchain) in the NAMESPACE
R+   #must add importFrom(expm, "expm")
R+   transitionMatrix<-expm(generator_matrix*t)
R+   out<-as(transitionMatrix,"markovchain")
R+   return(out)
R+ }
R> #loading ctmcd dataset
R> data(tm_abs)
R> gm0=matrix(1,8,8) #initializing
R> diag(gm0)=0
R> diag(gm0)=-rowSums(gm0)
R> gm0[8,]=0
R> gmem=gm(tm_abs,te=1,method="EM",gmguess=gm0) #estimating GM
R> mc_at_2=gm_to_markovchain(object=gmem, t=2) #converting to TM at time 2
```

### 5.6. Pseudo - Bayesian Estimation

Hu, Kiesel, and Perraudin (2002) shows an empirical quasi-Bayesian method to estimate transition matrices, given an empirical $\hat{P}$ transition matrix (estimated using the classical approach) and an a - priori estimate $Q$. In particular, each row of the matrix is estimated using the linear combination $\alpha \cdot Q + (1 - 1alpha) \cdot P$, where $\alpha$ is defined for each row as Equation 23 shows

$$\begin{cases} \hat{\alpha_i} = \frac{\hat{K_i}}{v(i)+\hat{K_i}} \\ \hat{K_i} = \frac{v(i)^2 - \sum_j Y_{ij}^2}{\sum_j (Y_{ij} - v(i)*q_{ij})^2} \end{cases} \tag{23}$$

The following code returns the pseudo Bayesian estimate of the transition matrix:

```
R> pseudoBayesEstimator <- function(raw, apriori){
R+   v_i <- rowSums(raw)
R+   K_i <- numeric(nrow(raw))
R+   sumSquaredY <- rowSums(raw^2)
R+   #get numerator
R+   K_i_num <- v_i^2-sumSquaredY
R+   #get denominator
R+   VQ <- matrix(0,nrow= nrow(apriori),ncol=ncol(apriori))
R+   for (i in 1:nrow(VQ)) {
R+     VQ[i,]<-v_i[i]*apriori[i,]
R+   }
R+
```

```
R+   K_i_den<-rowSums((raw - VQ)^2)
R+
R+   K_i <- K_i_num/K_i_den
R+
R+   #get the alpha vector
R+   alpha <- K_i / (v_i+K_i)
R+
R+   #empirical transition matrix
R+   Emp<-raw/rowSums(raw)
R+
R+   #get the estimate
R+   out<-matrix(0, nrow= nrow(raw),ncol=ncol(raw))
R+   for (i in 1:nrow(out)) {
R+     out[i,]<-alpha[i]*apriori[i,]+(1-alpha[i])*Emp[i,]
R+   }
R+   return(out)
R+ }
```

We then apply it to the weather example:

```
R> trueMc<-as(matrix(c(0.1, .9,.7,.3),nrow = 2, byrow = 2),"markovchain")
R> aprioriMc<-as(matrix(c(0.5, .5,.5,.5),nrow = 2, byrow = 2),"markovchain")
R>
R> smallSample<-rmarkovchain(n=20,object = trueMc)
R> smallSampleRawTransitions<-createSequenceMatrix(stringchar = smallSample)
R> pseudoBayesEstimator(
R+   raw = smallSampleRawTransitions,
R+   apriori = aprioriMc@transitionMatrix
R+ ) - trueMc@transitionMatrix

s2 0.003767055 -0.003767055
```

## 5.7. Bayesian Estimation

The **markovchain** package provides functionality for maximum a posteriori (MAP) estimation of the chain parameters (at the time of writing this document, only first order models are supported) by Bayesian inference. It also computes the probability of observing a new data set, given a (different) data set. This vignette provides the mathematical description for the methods employed by the package.

*Notation and set-up*

The data is denoted by $D$, the model parameters (transition matrix) by $\theta$. The object of interest is $P(\theta|D)$ (posterior density). $\mathcal{A}$ represents an alphabet class, each of whose members represent a state of the chain. Therefore

$$D = s_0 s_1 ... s_{N-1}, s_t \in \mathcal{A}$$

where $N$ is the length of the data set. Also,

$$\theta = \{p(s|u), s \in \mathcal{A}, u \in \mathcal{A}\}$$

where $\sum_{s\in\mathcal{A}} p(s|u) = 1$ for each $u \in \mathcal{A}$.
Our objective is to find $\theta$ which maximizes the posterior. That is, if our solution is denoted by $\hat{\theta}$, then

$$\hat{\theta} = \underset{\theta}{argmax} P(\theta|D)$$

where the search space is the set of right stochastic matrices of dimension $|\mathcal{A}|x|\mathcal{A}|$.
$n(u, s)$ denotes the number of times the word $us$ occurs in $D$ and $n(u) = \sum_{s\in\mathcal{A}} n(u, s)$. The hyper-parameters are similarly denoted by $\alpha(u, s)$ and $\alpha(u)$ respectively.

*Methods*

Given $D$, its likelihood conditioned on the observed initial state in D is given by

$$P(D|\theta) = \prod_{s\in\mathcal{A}} \prod_{u\in\mathcal{A}} p(s|u)^{n(u,s)}$$

Conjugate priors are used to model the prior $P(\theta)$. The reasons are two fold:

1. Exact expressions can be derived for the MAP estimates, expectations and even variances
2. Model order selection/comparison can be implemented easily (available in a future release of the package)

The hyper-parameters determine the form of the prior distribution, which is a product of Dirichlet distributions

$$P(\theta) = \prod_{u \in \mathcal{A}} \Big\{ \frac{\Gamma(\alpha(u))}{\prod_{s \in \mathcal{A}} \Gamma(\alpha(u,s))} \prod_{s \in \mathcal{A}} p(s|u)^{\alpha(u,s))-1} \Big\}$$

where $\Gamma(.)$ is the Gamma function. The hyper-parameters are specified using the `hyperparam` argument in the `markovchainFit` function. If this argument is not specified, then a default value of 1 is assigned to each hyper-parameter resulting in the prior distribution of each chain parameter to be uniform over $[0,1]$.

Given the likelihood and the prior as described above, the evidence $P(D)$ is simply given by

$$P(D) = \int P(D|\theta)P(\theta)d\theta$$

which simplifies to

$$P(D) = \prod_{u \in \mathcal{A}} \Big\{ \frac{\Gamma(\alpha(u))}{\prod_{s \in \mathcal{A}} \Gamma(\alpha(u,s))} \frac{\prod_{s \in \mathcal{A}} \Gamma(n(u,s) + \alpha(u,s))}{\Gamma(\alpha(u) + n(u))} \Big\}$$

Using Bayes' theorem, the posterior now becomes (thanks to the choice of conjugate priors)

$$P(\theta|D) = \prod_{u \in \mathcal{A}} \Big\{ \frac{\Gamma(n(u) + \alpha(u))}{\prod_{s \in \mathcal{A}} \Gamma(n(u,s) + \alpha(u,s))} \prod_{s \in \mathcal{A}} p(s|u)^{n(u,s)+\alpha(u,s))-1} \Big\}$$

Since this is again a product of Dirichlet distributions, the marginal distribution of a particular parameter $P(s|u)$ of our chain is given by

$$P(s|u) \sim Beta(n(u,s) + \alpha(u,s), n(u) + \alpha(u) - n(u,s) - \alpha(u,s))$$

Thus, the MAP estimate $\hat{\theta}$ is given by

$$\hat{\theta} = \Big\{ \frac{n(u,s) + \alpha(u,s) - 1}{n(u) + \alpha(u) - |\mathcal{A}|}, s \in \mathcal{A}, u \in \mathcal{A} \Big\}$$

The function also returns the expected value, given by

$$\mathrm{E}_{\mathrm{post}} p(s|u) = \Big\{ \frac{n(u,s) + \alpha(u,s)}{n(u) + \alpha(u)}, s \in \mathcal{A}, u \in \mathcal{A} \Big\}$$

The variance is given by

$$\mathrm{Var}_{\mathrm{post}} p(s|u) = \frac{n(u,s) + \alpha(u,s)}{(n(u) + \alpha(u))^2} \frac{n(u) + \alpha(u) - n(u,s) - \alpha(u,s)}{n(u) + \alpha(u) + 1}$$

The square root of this quantity is the standard error, which is returned by the function. The confidence intervals are constructed by computing the inverse of the beta integral.

*Predictive distribution*

Given the old data set, the probability of observing new data is $P(D'|D)$ where $D'$ is the new data set. Let $m(u,s), m(u)$ denote the corresponding counts for the new data. Then,

$$P(D'|D) = \int P(D'|\theta)P(\theta|D)d\theta$$

We already know the expressions for both quantities in the integral and it turns out to be similar to evaluating the evidence

$$P(D'|D) = \prod_{u \in \mathcal{A}} \left\{ \frac{\Gamma(\alpha(u))}{\prod_{s \in \mathcal{A}} \Gamma(\alpha(u,s))} \frac{\prod_{s \in \mathcal{A}} \Gamma(n(u,s) + m(u,s) + \alpha(u,s))}{\Gamma(\alpha(u) + n(u) + m(u))} \right\}$$

*Choosing the hyper-parameters*

The hyper parameters model the shape of the parameters' prior distribution. These must be provided by the user. The package offers functionality to translate a given prior belief transition matrix into the hyper-parameter matrix. It is assumed that this belief matrix corresponds to the mean value of the parameters. Since the relation

$$\mathrm{E}_{\mathrm{prior}} p(s|u) = \frac{\alpha(u,s)}{\alpha(u)}$$

holds, the function accepts as input the belief matrix as well as a scaling vector (serves as a proxy for $\alpha(.)$) and proceeds to compute $\alpha(.,.)$.

Alternatively, the function accepts a data sample and infers the hyper-parameters from it. Since the mode of a parameter (with respect to the prior distribution) is proportional to one less than the corresponding hyper-parameter, we set

$$\alpha(u,s) - 1 = m(u,s)$$

where $m(u,s)$ is the $u \to s$ transition count in the data sample. This is regarded as a 'fake count' which helps $\alpha(u,s)$ to reflect knowledge of the data sample.

*Usage and examples*

```
R> weatherStates <- c("sunny", "cloudy", "rain")
R> byRow <- TRUE
R> weatherMatrix <- matrix(data = c(0.7, 0.2, 0.1,
R+                                  0.3, 0.4, 0.3,
R+                                  0.2, 0.4, 0.4),
R+                         byrow = byRow, nrow = 3,
R+                         dimnames = list(weatherStates, weatherStates))
```

```
R> mcWeather <- new("markovchain", states = weatherStates,
R+                  byrow = byRow, transitionMatrix = weatherMatrix,
R+                  name = "Weather")
R> weathersOfDays <- rmarkovchain(n = 365, object = mcWeather, t0 = "sunny")
```

For the purpose of this section, we shall continue to use the weather of days example introduced in the main vignette of the package (reproduced above for convenience).

Let us invoke the fit function to estimate the MAP parameters with 92% confidence bounds and hyper-parameters as shown below, based on the first 200 days of the weather data. Additionally, let us find out what the probability is of observing the weather data for the next 165 days. The usage would be as follows

```
R> hyperMatrix<-matrix(c(1, 1, 2,
R+                        3, 2, 1,
R+                        2, 2, 3),
R+                      nrow = 3, byrow = TRUE,
R+                      dimnames = list(weatherStates,weatherStates))
R> markovchainFit(weathersOfDays[1:200], method = "map",
R+                confidencelevel = 0.92, hyperparam = hyperMatrix)
```

```

[1,] 0.2517858 0.2034964 0.2679995
[2,] 0.2897553 0.2151572 0.1658589
[3,] 0.1478835 0.0000000 0.6344258

$confidenceInterval$upperEndpointMatrix
          [,1]      [,2]      [,3]
[1,] 0.4627250 0.4020441 0.4834475
[2,] 0.5827801 0.4669714 0.4011024
[3,] 0.2859395 0.1215932 1.0000000

$logLikelihood
[1] -181.8872
```

```
R> predictiveDistribution(weathersOfDays[1:200],
R+                        weathersOfDays[201:365],hyperparam = hyperMatrix2)
```

```
[1] -150.4915
```

Note that the predictive probability is very small. However, this can be useful when comparing model orders. Suppose we have an idea of the (prior) transition matrix corresponding to the expected value of the parameters, and have a data set from which we want to deduce the MAP estimates. We can infer the hyper-parameters from this known transition matrix itself, and use this to obtain our MAP estimates.

```
R> inferHyperparam(transMatr = weatherMatrix, scale = c(10, 10, 10))
```

```
$scaledInference
       cloudy rain sunny
cloudy      4    3     3
rain        4    4     2
sunny       2    1     7
```

Alternatively, we can use a data sample to infer the hyper-parameters.

```
R> inferHyperparam(data = weathersOfDays[1:15])
```

```
$dataInference
       cloudy rain sunny
cloudy      1    2     3
rain        2    1     1
sunny       4    1     8
```

In order to use the inferred hyper-parameter matrices, we do

```
R> hyperMatrix3 <- inferHyperparam(transMatr = weatherMatrix,
R+                                   scale = c(10, 10, 10))
R> hyperMatrix3 <- hyperMatrix3$scaledInference
R> hyperMatrix4 <- inferHyperparam(data = weathersOfDays[1:15])
R> hyperMatrix4 <- hyperMatrix4$dataInference
```

Now we can safely use `hyperMatrix3` and `hyperMatrix4` with `markovchainFit` (in the `hyperparam` argument).

Supposing we don't provide any hyper-parameters, then the prior is uniform. This is the same as maximum likelihood.

```
R> data(preproglucacon)
R> preproglucacon <- preproglucacon[[2]]
R> MLEest <- markovchainFit(preproglucacon, method = "mle")
R> MAPest <- markovchainFit(preproglucacon, method = "map")
R> MLEest$estimate

# 6. Applications

This section shows applications of DTMC in various fields.

## 6.1. Weather forecasting

Markov chains provide a simple model to predict the next day's weather given the current meteorological condition. The first application herewith shown is the "Land of Oz example" from J. G. Kemeny, J. L.Snell, and G. L. Thompson (1974), the second is the "Alofi Island Rainfall" from P. J. Avery and D. A. Henderson (1999).

### *Land of Oz*

The Land of Oz is acknowledged not to have ideal weather conditions at all: the weather is snowy or rainy very often and, once more, there are never two nice days in a row. Consider three weather states: rainy, nice and snowy. Let the transition matrix be as in the following:

```
R> mcWP <- new("markovchain", states = c("rainy", "nice", "snowy"),
R+           transitionMatrix = matrix(c(0.5, 0.25, 0.25,
R+                                        0.5, 0, 0.5,
R+                                        0.25,0.25,0.5), byrow = T, nrow = 3))
```

Given that today it is a nice day, the corresponding stochastic row vector is $w_0 = (0\,,1\,,0)$ and the forecast after 1, 2 and 3 days are given by

```
R> W0 <- t(as.matrix(c(0, 1, 0)))
R> W1 <- W0 * mcWP; W1

     rainy nice snowy
[1,]   0.5    0   0.5

R> W2 <- W0 * (mcWP ^ 2); W2

     rainy nice snowy
[1,] 0.375 0.25 0.375

R> W3 <- W0 * (mcWP ^ 3); W3

       rainy   nice   snowy
[1,] 0.40625 0.1875 0.40625
```

As can be seen from $w_1$, if in the Land of Oz today is a nice day, tomorrow it will rain or snow with probability 1. One week later, the prediction can be computed as

```
R> W7 <- W0 * (mcWP ^ 7)
R> W7
```

```
         rainy      nice     snowy
[1,] 0.4000244 0.1999512 0.4000244
```

The steady state of the chain can be computed by means of the `steadyStates` method.

```
R> q <- steadyStates(mcWP)
R> q

     rainy nice snowy
[1,]   0.4  0.2   0.4
```

Note that, from the seventh day on, the predicted probabilities are substantially equal to the steady state of the chain and they don't depend from the starting point, as the following code shows.

```
R> R0 <- t(as.matrix(c(1, 0, 0)))
R> R7 <- R0 * (mcWP ^ 7); R7

         rainy      nice     snowy
[1,] 0.4000244 0.2000122 0.3999634

R> S0 <- t(as.matrix(c(0, 0, 1)))
R> S7 <- S0 * (mcWP ^ 7); S7

         rainy      nice     snowy
[1,] 0.3999634 0.2000122 0.4000244
```

### *Alofi Island Rainfall*

Alofi Island daily rainfall data were recorded from January 1st, 1987 until December 31st, 1989 and classified into three states: "0" (no rain), "1-5" (from non zero until 5 mm) and "6+" (more than 5mm). The corresponding dataset is provided within the **markovchain** package.

```
R> data("rain", package = "markovchain")
R> table(rain$rain)

  0 1-5  6+
548 295 253
```

The underlying transition matrix is estimated as follows.

```
R> mcAlofi <- markovchainFit(data = rain$rain, name = "Alofi MC")$estimate
R> mcAlofi
```

```
Alofi MC
 A  3 - dimensional discrete Markov Chain defined by the following states:
 0, 1-5, 6+
 The transition matrix  (by rows)  is defined as follows:
            0       1-5        6+
0   0.6605839 0.2299270 0.1094891
1-5 0.4625850 0.3061224 0.2312925
6+  0.1976285 0.3122530 0.4901186
```

The long term daily rainfall distribution is obtained by means of the `steadyStates` method.

```
R> steadyStates(mcAlofi)

             0       1-5        6+
[1,] 0.5008871 0.2693656 0.2297473
```

## 6.2. Finance and Economics

Other relevant applications of DTMC can be found in Finance and Economics.

*Finance*

Credit ratings transitions have been successfully modeled with discrete time Markov chains. Some rating agencies publish transition matrices that show the empirical transition probabilities across credit ratings. The example that follows comes from **CreditMetrics** R package (Wittmann 2007), carrying Standard & Poor's published data.

```
R> rc <- c("AAA", "AA", "A", "BBB", "BB", "B", "CCC", "D")
R> creditMatrix <- matrix(
R+   c(90.81, 8.33, 0.68, 0.06, 0.08, 0.02, 0.01, 0.01,
R+     0.70, 90.65, 7.79, 0.64, 0.06, 0.13, 0.02, 0.01,
R+     0.09, 2.27, 91.05, 5.52, 0.74, 0.26, 0.01, 0.06,
R+     0.02, 0.33, 5.95, 85.93, 5.30, 1.17, 1.12, 0.18,
R+     0.03, 0.14, 0.67, 7.73, 80.53, 8.84, 1.00, 1.06,
R+     0.01, 0.11, 0.24, 0.43, 6.48, 83.46, 4.07, 5.20,
R+     0.21, 0, 0.22, 1.30, 2.38, 11.24, 64.86, 19.79,
R+     0, 0, 0, 0, 0, 0, 0, 100
R+    )/100, 8, 8, dimnames = list(rc, rc), byrow = TRUE)
```

It is easy to convert such matrices into `markovchain` objects and to perform some analyses

```
R> creditMc <- new("markovchain", transitionMatrix = creditMatrix,
R+                 name = "S&P Matrix")
R> absorbingStates(creditMc)

[1] "D"
```

*Economics*

For a recent application of **markovchain** in Economic, see Jacob (2014).

A dynamic system generates two kinds of economic effects (Bard 2000):

1. those incurred when the system is in a specified state, and
2. those incurred when the system makes a transition from one state to another.

Let the monetary amount of being in a particular state be represented as a m-dimensional column vector $c^{\mathrm{S}}$, while let the monetary amount of a transition be embodied in a $C^R$ matrix in which each component specifies the monetary amount of going from state i to state j in a single step. Henceforth, Equation (24) represents the monetary of being in state $i$.

$$c_i = c_i^{\mathrm{S}} + \sum_{j=1}^{m} C_{ij}^{\mathrm{R}} p_{ij}. \tag{24}$$

Let $\bar{c} = [c_i]$ and let $e_i$ be the vector valued 1 in the initial state and 0 in all other, then, if $f_n$ is the random variable representing the economic return associated with the stochastic process at time $n$, Equation (25) holds:

$$E\left[f_n\left(X_n\right)|X_0 = i\right] = e_i P^n \bar{c}. \tag{25}$$

The following example assumes that a telephone company models the transition probabilities between customer/non-customer status by matrix $P$ and the cost associated to states by matrix $M$.

```
R> statesNames <- c("customer", "non customer")
R> P <- zeros(2); P[1, 1] <- .9; P[1, 2] <- .1; P[2, 2] <- .95; P[2, 1] <- .05;
R> rownames(P) <- statesNames; colnames(P) <- statesNames
R> mcP <- new("markovchain", transitionMatrix = P, name = "Telephone company")
R> M <- zeros(2); M[1, 1] <- -20; M[1, 2] <- -30; M[2, 1] <- -40; M[2, 2] <- 0
```

If the average revenue for existing customer is +100, the cost per state is computed as follows.

```
R> c1 <- 100 + conditionalDistribution(mcP, state = "customer") %*% M[1,]
R> c2 <- 0 + conditionalDistribution(mcP, state = "non customer") %*% M[2,]
```

For an existing customer, the expected gain (loss) at the fifth year is given by the following code.

```
R> as.numeric((c(1, 0)* mcP ^ 5) %*% (as.vector(c(c1, c2))))
```

```
[1] 48.96009
```

## 6.3. Actuarial science

Markov chains are widely applied in the field of actuarial science. Two classical applications are policyholders' distribution across Bonus Malus classes in Motor Third Party Liability (MTPL) insurance (Section 6.3.1) and health insurance pricing and reserving (Section 6.3.2).

*MPTL Bonus Malus*

Bonus Malus (BM) contracts grant the policyholder a discount (enworsen) as a function of the number of claims in the experience period. The discount (enworsen) is applied on a premium that already allows for known (a priori) policyholder characteristics (Denuit, Maréchal, Pitrebois, and Walhin 2007) and it usually depends on vehicle, territory, the demographic profile of the policyholder, and policy coverage deep (deductible and policy limits).\ Since the proposed BM level depends on the claim on the previous period, it can be modeled by a discrete Markov chain. A very simplified example follows. Assume a BM scale from 1 to 5, where 4 is the starting level. The evolution rules are shown in Equation 26:

$$bm_{t+1} = \max\left(1, bm_t - 1\right) * \left(\tilde{N} = 0\right) + \min\left(5, bm_t + 2 * \tilde{N}\right) * \left(\tilde{N} \geq 1\right). \tag{26}$$

The number of claim $\tilde{N}$ is a random variable that is assumed to be Poisson distributed.

```
R> getBonusMalusMarkovChain <- function(lambda) {
R+  bmMatr <- zeros(5)
R+  bmMatr[1, 1] <- dpois(x = 0, lambda)
R+  bmMatr[1, 3] <- dpois(x = 1, lambda)
R+  bmMatr[1, 5] <- 1 - ppois(q = 1, lambda)
R+
R+  bmMatr[2, 1] <- dpois(x = 0, lambda)
R+  bmMatr[2, 4] <- dpois(x = 1, lambda)
R+  bmMatr[2, 5] <- 1 - ppois(q = 1, lambda)
R+
R+  bmMatr[3, 2] <- dpois(x = 0, lambda)
R+  bmMatr[3, 5] <- 1 - dpois(x=0, lambda)
R+
R+  bmMatr[4, 3] <- dpois(x = 0, lambda)
R+  bmMatr[4, 5] <- 1 - dpois(x = 0, lambda)
R+
R+  bmMatr[5, 4] <- dpois(x = 0, lambda)
R+  bmMatr[5, 5] <- 1 - dpois(x = 0, lambda)
R+  stateNames <- as.character(1:5)
R+  out <- new("markovchain", transitionMatrix = bmMatr,
R+              states = stateNames, name = "BM Matrix")
R+  return(out)
R+ }
```

Assuming that the a-priori claim frequency per car-year is 0.05 in the class (being the class the group of policyholders that share the same common characteristics), the underlying BM transition matrix and its underlying steady state are as follows.

```
R> bmMc <- getBonusMalusMarkovChain(0.05)
R> as.numeric(steadyStates(bmMc))
```

```
[1] 0.895836079 0.045930498 0.048285405 0.005969247 0.003978772
```

If the underlying BM coefficients of the class are 0.5, 0.7, 0.9, 1.0, 1.25, this means that the average BM coefficient applied on the long run to the class is given by

```
R> sum(as.numeric(steadyStates(bmMc)) * c(0.5, 0.7, 0.9, 1, 1.25))
```

```
[1] 0.534469
```

This means that the average premium paid by policyholders in the portfolio almost halves in the long run.

*Health insurance example*

Actuaries quantify the risk inherent in insurance contracts evaluating the premium of insurance contract to be sold (therefore covering future risk) and evaluating the actuarial reserves of existing portfolios (the liabilities in terms of benefits or claims payments due to policyholder arising from previously sold contracts), see Deshmukh (2012) for details.

An applied example can be performed using the data from De Angelis, Paolo and Di Falco, L. (2016) that has been saved in the `exdata` folder.

```
R> ltcDemoPath<-system.file("extdata", "ltdItaData.txt",
R+                          package = "markovchain")
R> ltcDemo<-read.table(file = ltcDemoPath, header=TRUE,
R+                     sep = ";", dec = ".")
R> head(ltcDemo)
```

```
  age          pAD        pID          pAI       pAA
1  20 0.0004616002 0.01083364 0.0001762467 0.9993622
2  21 0.0004824888 0.01079719 0.0001710577 0.9993465
3  22 0.0004949938 0.01177076 0.0001592333 0.9993458
4  23 0.0005042935 0.01159394 0.0001605731 0.9993351
5  24 0.0005074193 0.01260574 0.0001606504 0.9993319
6  25 0.0005154267 0.01526364 0.0001643603 0.9993202
```

The data shows the probability of transition between the state of (A)ctive, to (I)ll and Dead. It is easy to complete the transition matrix.

```
R> ltcDemo<-transform(ltcDemo,
R+                    pIA=0,
R+                    pII=1-pID,
R+                    pDD=1,
R+                    pDA=0,
R+                    pDI=0)
```

Now we build a function that returns the transition during the $t+1$ th year, assuming that the subject has attained year $t$.

```
R> possibleStates<-c("A","I","D")
R> getMc4Age<-function(age) {
R+   transitionsAtAge<-ltcDemo[ltcDemo$age==age,]
R+
R+   myTransMatr<-matrix(0, nrow=3,ncol = 3,
R+                       dimnames = list(possibleStates, possibleStates))
R+   myTransMatr[1,1]<-transitionsAtAge$pAA[1]
R+   myTransMatr[1,2]<-transitionsAtAge$pAI[1]
R+   myTransMatr[1,3]<-transitionsAtAge$pAD[1]
R+   myTransMatr[2,2]<-transitionsAtAge$pII[1]
R+   myTransMatr[2,3]<-transitionsAtAge$pID[1]
R+   myTransMatr[3,3]<-1
R+
R+   myMc<-new("markovchain", transitionMatrix = myTransMatr,
R+             states = possibleStates,
R+             name = paste("Age",age,"transition matrix"))
R+
R+   return(myMc)
R+
R+ }
```

Cause transitions are not homogeneous across ages, we use a `markovchainList` object to describe the transition probabilities for a guy starting at age 100.

```
R> getFullTransitionTable<-function(age){
R+   ageSequence<-seq(from=age, to=120)
R+   k=1
R+   myList=list()
R+   for ( i in ageSequence) {
R+     mc_age_i<-getMc4Age(age = i)
R+     myList[[k]]<-mc_age_i
R+     k=k+1
R+   }
R+   myMarkovChainList<-new("markovchainList", markovchains = myList,
R+                          name = paste("TransitionsSinceAge", age, sep = ""))
R+   return(myMarkovChainList)
R+ }
R> transitionsSince100<-getFullTransitionTable(age=100)
```

We can use such transition for simulating ten life trajectories for a guy that begins “active” (A) aged 100:

```
R> rmarkovchain(n = 10, object = transitionsSince100,
R+              what = "matrix", t0 = "A", include.t0 = TRUE)
```

```
      [,1] [,2] [,3] [,4] [,5] [,6] [,7] [,8] [,9] [,10] [,11] [,12] [,13]
 [1,] "A"  "A"  "A"  "A"  "A"  "I"  "I"  "D"  "D"  "D"   "D"   "D"   "D"
 [2,] "A"  "A"  "A"  "I"  "D"  "D"  "D"  "D"  "D"  "D"   "D"   "D"   "D"
 [3,] "A"  "A"  "D"  "D"  "D"  "D"  "D"  "D"  "D"  "D"   "D"   "D"   "D"
 [4,] "A"  "A"  "D"  "D"  "D"  "D"  "D"  "D"  "D"  "D"   "D"   "D"   "D"
 [5,] "A"  "A"  "A"  "D"  "D"  "D"  "D"  "D"  "D"  "D"   "D"   "D"   "D"
 [6,] "A"  "A"  "A"  "A"  "A"  "A"  "I"  "D"  "D"  "D"   "D"   "D"   "D"
 [7,] "A"  "A"  "D"  "D"  "D"  "D"  "D"  "D"  "D"  "D"   "D"   "D"   "D"
 [8,] "A"  "A"  "A"  "A"  "A"  "I"  "I"  "D"  "D"  "D"   "D"   "D"   "D"
 [9,] "A"  "D"  "D"  "D"  "D"  "D"  "D"  "D"  "D"  "D"   "D"   "D"   "D"
[10,] "A"  "A"  "A"  "I"  "D"  "D"  "D"  "D"  "D"  "D"   "D"   "D"   "D"
      [,14] [,15] [,16] [,17] [,18] [,19] [,20] [,21] [,22]
 [1,] "D"   "D"   "D"   "D"   "D"   "D"   "D"   "D"   "D"
 [2,] "D"   "D"   "D"   "D"   "D"   "D"   "D"   "D"   "D"
 [3,] "D"   "D"   "D"   "D"   "D"   "D"   "D"   "D"   "D"
 [4,] "D"   "D"   "D"   "D"   "D"   "D"   "D"   "D"   "D"
 [5,] "D"   "D"   "D"   "D"   "D"   "D"   "D"   "D"   "D"
 [6,] "D"   "D"   "D"   "D"   "D"   "D"   "D"   "D"   "D"
 [7,] "D"   "D"   "D"   "D"   "D"   "D"   "D"   "D"   "D"
 [8,] "D"   "D"   "D"   "D"   "D"   "D"   "D"   "D"   "D"
 [9,] "D"   "D"   "D"   "D"   "D"   "D"   "D"   "D"   "D"
[10,] "D"   "D"   "D"   "D"   "D"   "D"   "D"   "D"   "D"
```

Lets consider 1000 simulated live trajectories, for a healthy guy aged 80. We can compute the expected time a guy will be disabled starting active at age 80.

```
R> transitionsSince80<-getFullTransitionTable(age=80)
R> lifeTrajectories<-rmarkovchain(n=1e3, object=transitionsSince80,
R+                                what="matrix",t0="A",include.t0=TRUE)
R> temp<-matrix(0,nrow=nrow(lifeTrajectories),ncol = ncol(lifeTrajectories))
R> temp[lifeTrajectories=="I"]<-1
R> expected_period_disabled<-mean(rowSums((temp)))
R> expected_period_disabled
```

```
[1] 1.247
```

Assuming that the health insurance will pay a benefit of 12000 per year disabled and that the real interest rate is 0.02, we can compute the lump sum premium at 80.

```
R> mean(rowMeans(12000*temp%*%( matrix((1+0.02)^-seq(from=0, to=ncol(temp)-1)))))
```

```
[1] 12391.18
```

### 6.4. Sociology

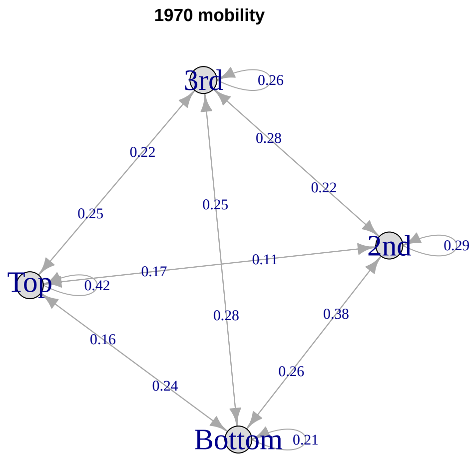

Figure 5: 1970 UK cohort mobility data.

Markov chains have been actively used to model progressions and regressions between social classes. The first study was performed by Glass and Hall (1954), while a more recent application can be found in Jo Blanden and Machin (2005). The table that follows shows the income quartile of the father when the son was 16 (in 1984) and the income quartile of the son when aged 30 (in 2000) for the 1970 cohort.

```
R> data("blanden")
R> mobilityMc <- as(blanden, "markovchain")
R> mobilityMc
```

```
Unnamed Markov chain
 A  4 - dimensional discrete Markov Chain defined by the following states:
 Bottom, 2nd, 3rd, Top
 The transition matrix  (by rows)  is defined as follows:
             2nd       3rd    Bottom       Top
Bottom 0.2900000 0.2200000 0.3800000 0.1100000
2nd    0.2772277 0.2574257 0.2475248 0.2178218
3rd    0.2626263 0.2828283 0.2121212 0.2424242
Top    0.1700000 0.2500000 0.1600000 0.4200000
```

The underlying transition graph is plotted in Figure 5.

The steady state distribution is computed as follows. Since transition across quartiles are shown, the probability function is evenly 0.25.

```
R> round(steadyStates(mobilityMc), 2)
```

```
     Bottom  2nd  3rd  Top
[1,]   0.25 0.25 0.25 0.25
```

## 6.5. Genetics and Medicine

This section contains two examples: the first shows the use of Markov chain models in genetics, the second shows an application of Markov chains in modelling diseases' dynamics.

*Genetics*

P. J. Avery and D. A. Henderson (1999) discusses the use of Markov chains in model Preproglucacon gene protein bases sequence. The `preproglucacon` dataset in **markovchain** contains the dataset shown in the package.

```
R> data("preproglucacon", package = "markovchain")
```

It is possible to model the transition probabilities between bases as shown in the following code.

```
R> mcProtein <- markovchainFit(preproglucacon$preproglucacon,
R+                             name = "Preproglucacon MC")$estimate
R> mcProtein

Preproglucacon MC
 A  4 - dimensional discrete Markov Chain defined by the following states:
 A, C, G, T
 The transition matrix  (by rows)  is defined as follows:
          A         C          G         T
A 0.3585271 0.1434109 0.16666667 0.3313953
C 0.3840304 0.1558935 0.02281369 0.4372624
G 0.3053097 0.1991150 0.15044248 0.3451327
T 0.2844523 0.1819788 0.17667845 0.3568905
```

*Medicine*

Discrete-time Markov chains are also employed to study the progression of chronic diseases. The following example is taken from B. A. Craig and A. A. Sendi (2002). Starting from six month follow-up data, the maximum likelihood estimation of the monthly transition matrix is obtained. This transition matrix aims to describe the monthly progression of CD4-cell counts of HIV infected subjects.

```
R> craigSendiMatr <- matrix(c(682, 33, 25,
R+               154, 64, 47,
R+               19, 19, 43), byrow = T, nrow = 3)
R> hivStates <- c("0-49", "50-74", "75-UP")
R> rownames(craigSendiMatr) <- hivStates
R> colnames(craigSendiMatr) <- hivStates
R> craigSendiTable <- as.table(craigSendiMatr)
R> mcM6 <- as(craigSendiTable, "markovchain")
R> mcM6@name <- "Zero-Six month CD4 cells transition"
R> mcM6
```

```
Zero-Six month CD4 cells transition
 A  3 - dimensional discrete Markov Chain defined by the following states:
 0-49, 50-74, 75-UP
 The transition matrix  (by rows)  is defined as follows:
           0-49      50-74      75-UP
0-49  0.9216216 0.04459459 0.03378378
50-74 0.5811321 0.24150943 0.17735849
75-UP 0.2345679 0.23456790 0.53086420
```

As shown in the paper, the second passage consists in the decomposition of $M_6 = V \cdot D \cdot V^{-1}$ in order to obtain $M_1$ as $M_1 = V \cdot D^{1/6} \cdot V^{-1}$ .

```
R> eig <- eigen(mcM6@transitionMatrix)
R> D <- diag(eig$values)

R> V <- eig$vectors
R> V %*% D %*% solve(V)

          [,1]       [,2]       [,3]
[1,] 0.9216216 0.04459459 0.03378378
[2,] 0.5811321 0.24150943 0.17735849
[3,] 0.2345679 0.23456790 0.53086420

R> d <- D ^ (1/6)
R> M <- V %*% d %*% solve(V)
R> mcM1 <- new("markovchain", transitionMatrix = M, states = hivStates)
```

# 7. Discussion, issues and future plans

The **markovchain** package has been designed in order to provide easily handling of DTMC and communication with alternative packages.

The package has known several improvements in the recent years: many functions added, porting the software in Rcpp **Rcpp** package (Eddelbuettel 2013) and many methodological improvements that have improved the software reliability.

# 8. Acknowledgments

The package was selected for Google Summer of Code 2015 support. The authors wish to thank Michael Cole, Tobi Gutman and Mildenberger Thoralf for their suggestions and bug checks. A final thanks also to Dr. Simona C. Minotti and Dr. Mirko Signorelli for their support in drafting this version of the vignettes.
